Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A01R-01-BAC** **Piney Run**

Cause Location: Begins at the mouth of an unnamed pond on Piney Run and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: DEQ station 1APIA001.80 at Route 671 (Harpers Ferry Rd): There were two or more STV exceedances in at least one 90-day period with <10 samples.

The Piney Run bacteria TMDL (Eq ID POL0023) was approved by the EPA on 07/06/2004 (Fed ID 24398). The SWCB approved the TMDL on 12/02/2004.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A01R_PIA01A00 / Piney Run / Segment begins at the mouth of an unnamed pond on Piney Run and continues downstream until the confluence with the Potomac River.	4A	Escherichia coli (E. coli)	2006	L	3.95

Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A01R-01-BEN** **Dutchman Creek**

Cause Location: Begins at the confluence with an unnamed tributary to Dutchman Creek at rivermile 2.9 and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: A total of four biological monitoring events in 2015 and 2016 at DEQ station 1aDUT000.62 at Route 674 and a total of three biological monitoring events in 2015 and 2016 at DEQ station 1aDUT002.72 at Route 673 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Potomac and Shenandoah River Basins

Cause Group Code: **A02R-04-BEN** **North Fork Catoctin Creek**

Cause Location: Begins at the confluence of an unnamed tributary to North Fork Catoctin Creek, approximately 0.75 rivermile upstream from Route 719 near Hillsboro, and continues downstream 2.45 rivermiles to an unnamed impoundment.

Cause City/County: Loudoun County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4C

Cause Description: One biological monitoring event in 2014 at DEQ station 1aNOC009.37 at Route 812 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

A new TMDL is not required for this impaired segment of North Fork Catoctin Creek because the Benthic TMDL Development Stressor Analysis Report for North Fork Catoctin Creek (09/15/2015) determined that this impairment is primarily due to low-flow conditions, and recommended that this segment be re-classified as Category 4C because the impairment is not caused by a pollutant.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A02R_NOC03A02 / North Fork Catoctin Creek / Segment begins at the confluence of an unnamed tributary to North Fork Catoctin Creek, approximately 0.75 rivermile upstream from Route 719 near Hillsboro, and continues downstream 2.45 rivermiles to an unnamed impoundment.	4C	Benthic Macroinvertebrates Bioassessments	NA	NA	2.55

Potomac and Shenandoah River Basins

Cause Group Code: **A03R-04-BAC** **Unnamed tributary to Limestone Branch**

Cause Location: Segment begins at the headwaters of the unnamed tributary and continues downstream to the confluence with Limestone Branch.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2018 Assessment: E. coli bacteria criterion excursions (3 of 10 samples - 30.0%) at DEQ station 1aXGJ000.42 at Selma Lane.

A new TMDL is not required for this impaired segment of the unnamed tributary to Limestone Branch because the downstream Limestone Branch bacteria TMDL (Fed ID 24403, 07/06/2004) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0026).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A03R_XGJ01A04 / Unnamed tributary to Limestone Branch / Segment begins at the boundary of the Section 8 PWS area designation and continues downstream to the confluence with Limestone Branch.	4A	Escherichia coli (E. coli)	2014	L	3.81
VAN-A03R_XGJ01B10 / Unnamed tributary to Limestone Branch / Segment begins at the headwaters of the unnamed tributary and continues downstream to the Section 8 PWS designation.	4A	Escherichia coli (E. coli)	2014	L	1.33

Potomac and Shenandoah River Basins

Cause Group Code: **A12E-01-PCB** Potomac River Embayments (FOU downstream until POM)

Cause Location: Includes the tidal portions of the following tributaries and embayments from the I-395 bridge (above the Woodrow Wilson Bridge) to the Potomac River Bridge at Route 301: Fourmile Run, Hunting Creek, Little Hunting Creek, Pohick Creek, Accotink Creek, Occoquan River, Neabsco Creek, Powells Creek, Quantico Creek, Chopawamsic Creek, Aquia Creek, and Potomac Creek.

Cause City/County: Alexandria; Arlington County; Fairfax County; King George County; Prince William County; Stafford County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A; Polychlorinated biphenyls (PCBs)/4A

Cause Description: The fish consumption use is impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 4/19/99 and modified 12/13/04 and 10/7/09, limits consumption of bullhead catfish, channel catfish less than 18 in long, largemouth bass, anadromous (coastal) striped bass, sunfish species, smallmouth bass, white catfish, white perch, gizzard shad, and yellow perch to no more than two meals per month. The advisory also bans the consumption of American eel, carp, and channel catfish greater than 18 in long.

The following exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for PCBs in fish tissue were recorded: 7 in 5 species (largemouth bass, carp, channel catfish, gizzard shad, blue catfish) in 2015 at 1aFOU000.45; 6 in 6 species (largemouth bass, carp, channel catfish, gizzard shad, white catfish, blue catfish) in 2015 at 1aHUT000.01; 4 in 3 species (carp, channel catfish, blue catfish) in 2015 at 1aLIF000.01; 10 in 7 species (largemouth bass, carp, channel catfish, bluegill sunfish, brown bullhead catfish, northern snakehead, gizzard shad) in 2015 at 1aNEA000.57; 8 in 7 species (largemouth bass, bluegill sunfish, channel catfish, blue catfish, brown bullhead catfish, carp, northern snakehead) collected in 2015 at 1aPOH002.27; 18 in 9 species (largemouth bass, yellow perch, channel catfish, carp, brown bullhead catfish, American eel, white perch, gizzard shad, bluegill sunfish) in 2008 at 1aCHO000.90 (2014IR); 9 in 5 species (largemouth bass, channel catfish, blue catfish, brown bullhead catfish, carp) in 2015 at 1aPOW001.11; 10 in 6 species (bluegill sunfish, channel catfish, blue catfish, white catfish, gizzard shad, northern snakehead) in 2015 and 1 in 1 species (northern snakehead) in 2016 at 1aAUA003.71; 10 in 5 species (blue catfish, channel catfish, carp, gizzard shad, northern snakehead) in 2015 at 1aPOM001.04; 7 in 7 species (brown bullhead catfish, carp, channel catfish, gizzard shad, largemouth bass, pumpkinseed sunfish and yellow perch) in 2005 (2012IR), 5 in 1 species (American shad) in 2006 (2012IR), and 3 in 3 species (largemouth bass, gizzard shad, bluegill sunfish) in 2008 (2014IR) at 1aACO001.78; 3 in 3 species (largemouth bass, bullhead catfish, sunfish) in 1996 at 1aQUA002.76 (2002IR); 1 in 1 species (northern snakehead) in 2019 at 1AQUA000.85; 7 in 4 species (largemouth bass, carp, channel catfish, gizzard shad) in 2008 at 1aQUA001.00 (2014IR); 9 in 7 species (striped bass, largemouth bass, bluegill sunfish, channel catfish, flathead catfish, white catfish, carp) in 2015, 1 in 1 species (northern snakehead) in 2016, 2 in 1 species (northern snakehead) in 2018, and 1 in 1 species (northern snakehead) in 2019 at 1aOCC002.47; 1 in 1 species (northern snakehead) in 2017 at 1AOCC006.71; and 1 in 1 sp. (northern snakehead) in 2017 at 1aDOU001.02.

2012IR: 2 exceedances of the human health criteria for PCBs were recorded in water samples collected in 2006 at 1aHUT001.72 and 1 exceedance was recorded in SPMD data collected in 2005 at 1aHUT001.54.

The Tidal Potomac River PCB TMDL was approved by EPA 10/31/07 and by SWCB 4/11/08

Potomac and Shenandoah River Basins

Cause Group Code: A12R-01-PCB Pimmit Run

Cause Location: Includes the following tributaries between the Virginia/Maryland state line near the Route 340 bridge (Loudoun County) to the I-395 bridge in Arlington County (above the Woodrow Wilson Bridge): Pimmit Run up to the Route 309 bridge.

Cause City/County: Arlington County; Fairfax County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/04, limits American eel consumption to no more than two meals per month.

The Tidal Potomac River PCB TMDL was approved by the EPA on 10/31/2007 (Fed ID 35018). The SWCB approved the TMDL on 04/11/2008.

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: 2010 Assessment: Exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in three species of fish (American eel, redbreast sunfish, and rainbow trout) collected in 2004 at DEQ station 1aACO004.86.

2014 Assessment: Exceedances of the water quality criterion based fish tissue value (TV) of 20 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue recorded in 2008 in one species of fish (American eel) sampled at DEQ station 1aACO011.62 and in 2007 in one species of fish (yellow bullhead catfish) sampled at DEQ station 1aACO012.58.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A19R-04-BEN** **South Run**

Cause Location: Begins downstream of Lake Brittle on South Run and continues downstream until the confluence with Lake Manassas (Broad Run).

Cause City/County: Fauquier County; Prince William County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: 2012 Assessment: Two biological monitoring events in 2005 at DEQ station 1aSOT001.65 at Route 652 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

The South Run benthic TMDL (Eq ID POL0374) was approved by the EPA on 08/02/2006 (Fed ID 24412). The SWCB approved the TMDL on 03/09/2007. The primary stressor identified for South Run was determined based on evaluations of candidate stressors that potentially could be impacting the stream. Based on the stressor identification analysis, the most probable stressor for the benthic community of South Run was identified as total phosphorus enrichment.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A19R_SOT01A00 / South Run / Segment begins downstream of Lake Brittle on South Run and continues downstream until the confluence with Lake Manassas (Broad Run).	4A	Benthic Macroinvertebrates Bioassessments	1998	L	2.35

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A19R-05-BAC** **Broad Run**

Cause Location: Begins at the confluence with Mill Run and continues downstream until the confluence with Catletts Branch.

Cause City/County: Fauquier County; Prince William County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2014 Assessment: E. coli bacteria criterion excursions (3 of 12 samples - 25.0%) at DEQ station 1aBRU025.35 at Route 55. 2020 Assessment: E. coli bacteria criterion excursions (3 of 12 samples - 25.0%) at DEQ station 1aBRU026.40 at Route 628.

The Occoquan River bacteria TMDL for the Broad Run watershed was approved by the EPA on 11/15/2006 (Fed IDs 31994 and 31995). The SWCB approved the TMDL on 07/31/2008.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A19R_BRU07B06 / Broad Run / Segment begins at the confluence with Trapp Branch and continues downstream until the confluence with Catletts Branch.	4A	Escherichia coli (E. coli)	2006	L	1.16
VAN-A19R_BRU08A04 / Broad Run / Segment begins at the confluence with Mill Run and continues downstream to the confluence with Trapp Run.	4A	Escherichia coli (E. coli)	2004	L	1.17

Broad Run

Recreation

	Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
Escherichia coli (E. coli) - Total Impaired Size by Water Type:			2.33

Sources: Grazing in Riparian or Shoreline Zones; Impacts from Land Application of Wastes; Livestock (Grazing or Feeding Operations); Runoff from Forest/Grassland/Parkland; Sewage Discharges in Unsewered Areas; Wastes from Pets; Waterfowl; Wildlife Other than Waterfowl

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A19R-06-BAC** **Broad Run**

Cause Location: Begins at the confluence with Kettle Run and continues downstream until the confluence with Cedar Run, forming the Occoquan River/Lake Jackson.

Cause City/County: Prince William County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: DEQ station 1ABRU001.59 at Route 692 (Lucasville Rd): There were two or more STV exceedances in at least one 90-day period with <10 samples.

A new TMDL is not required for this impaired segment of Broad Run because the downstream bacteria TMDL (Fed ID 32111, 11/15/2006) included modeling, source identification, and reductions that covered the entire Occoquan River watershed (Eq ID POL0409).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A19R_BRU01A04 / Broad Run / Segment begins at the confluence with Kettle Run and continues downstream until the confluence with Cedar Run, forming the Occoquan River/Lake Jackson.	4A	Escherichia coli (E. coli)	2006	L	2.4

Potomac and Shenandoah River Basins

Cause Group Code: **A24L-01-PCB** **Occoquan Reservoir**

Cause Location: Segment includes the upper Bull Run arm of the Occoquan Reservoir; extending from rivermile 2.89 on Bull Run downstream until the crossing of the Route 612 (Yates Ford Road) bridge.

Cause City/County: Fairfax County; Prince William County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/04 and modified 07/27/05, limits consumption of carp and channel catfish to no more than two meals per month. The affected area includes Bull Run near Manassas Park from the I-66 bridge downstream approximately fourteen miles to the Route 612 (Yates Ford Road) bridge.

Six exceedances of the water quality criterion based fish tissue value (TV) of 18 ppb for PCBs were recorded in two species of fish (channel catfish and carp) sampled in 2015 at DEQ fish tissue monitoring station 1ABUL001.57.

Virginia Department of Environmental Quality

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A30E-01-PCB** Coan River, Monroe Creek, Upper Machodoc Creek

Cause Location: Includes the tidal portions of the following tributaries from the Potomac River Bridge at Route 301 to the mouth of the Potomac River near Smith Point: Upper Machodoc Creek, Monroe Creek, and Coan River.

Cause City/County: King George County; Northumberland County; Westmoreland County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/2004, limits consumption of channel catfish, gizzard shad, and white perch to no more than two meals per month.

Ten exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in six species of fish (channel catfish, gizzard shad, white perch, mummichog, spot, and croaker) sampled in 2004 and three exceedances in three species of fish (blue catfish, white perch, and gizzard shad) sampled in 2018 at DEQ station 1aUMC001.36. Five exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in four species of fish (channel catfish, gizzard shad, spot, and bluefish) sampled in 2004 and in one species of fish (gizzard shad) sampled in 2018 at DEQ station 1aUMC004.43.

The Tidal Potomac River PCB TMDL for the Upper Machodoc Creek watershed (Eq ID POL0483) was approved by the EPA on 10/31/2007 (Fed ID 35068). The SWCB approved the TMDL on 04/11/2008.

Monroe Creek was assessed as not supporting of the Fish Consumption Use in the 2004 cycle based on exceedances of the tissue screening level for PCBs in white perch and gizzard shad in 2001 at 1AMON002.49. Additional sampling at 1AMON002.60 in 2008 indicated PCBs in white perch, channel catfish, blue crab and gizzard shad. VDH issued a Fish Consumption Advisory for Monroe Creek on 12/13/2004 due to PCB contamination in gizzard shad, white perch, and channel catfish. The “Total Maximum Daily Loads of Polychlorinated Biphenyls (PCBs) for Tidal Portions of the Potomac and Anacostia Rivers in the District of Columbia, Maryland, and Virginia” report was approved on 10/30/2007 and by the SWCB on 4/11/2007. The segment is considered a Category 4A water. Additional monitoring in the 2018 cycle at station 1AMON002.49 indicated PCBs in blue catfish, blue crab, gizzard shad, and striped bass.

The Coan River was assessed as impaired of the Fish Consumption Use in the 2006 cycle due to a VDH Fish Consumption Advisory (12/13/2004) for PCBs in gizzard shad, white perch, and channel catfish. This was influenced by an exceedance of the fish tissue value in one sp. in 2004 at 1ACOA04.24. The impairment was confirmed with exceedances of the Human Health criteria in SPMD samples in 2005. The TMDL was completed as a part of the Potomac River Basin PCB TMDL, which was approved by the EPA on 10/30/2007 and by the SWCB on 4/11/2008. The segment is considered a Category 4A water. Additional monitoring indicated exceedance of the fish tissue value in gizzard shad in 2018 at 1ACOA004.24.

Potomac and Shenandoah River Basins

Cause Group Code: **A31E-01-SF** **Rosier Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 001-008A, 6/15/2019

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: In the 1998 cycle, a portion of Rosier Creek was impaired due to shellfish condemnation 088A, 7/1/1998. The Shellfish TMDL for that portion was developed during the 2008 cycle. The TMDL was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

In the 2020 cycle, the condemnation shrank considerably and was now smaller than the TMDL area (VDH-DSS Shellfish Condemnation 001-088A, 5/30/2018). The expansion was delisted and the lower portion of the TMDL are was partially delisted (Portion of condemnation 001-008S8, 5/30/2018). It is seasonally condemned so was Category 2C/2B.

In the 2022 cycle, the condemnation expanded again and the downstream portion was relisted. It is larger than the TMDL area. The expansion will be considered nested (Category 4A.)

Potomac and Shenandoah River Basins

Cause Group Code: **A31E-03-SF** **Monroe Creek**

Cause Location: The portion of VDH Shellfish Condemnation 002-001A, 6/17/2016 which is not included in the administrative condemnation.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH-DSS Shellfish Condemnation 002-001A, 6/15/2019 that is not administratively condemned

The area was seasonally condemned in the 2010 cycle, however condemnation A expanded in the 2014 cycle. The Shellfish TMDL for Monroe Creek was approved by the EPA on 6/8/2006 and by the SWCB on 7/27/2009. The area was addressed by the TMDL; therefore, it was considered Category 4A.

Condemnation A shrank slightly in the 2016 cycle and section M2 was split off; it was considered partially delisted (Cat. 2C.)

The lower portion of the condemnation converted to seasonally condemned in the 2020 cycle (002-001S9, 5/30/2018) and was partially delisted (Category 2C/2B).

It expanded again in the 2022 cycle.

Cause Group Code: **A31E-06-BAC** **Mattox Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnations 002-001B, 6/15/2019

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The segment was initially listed in 1996 based on excessive fecal coliform standards at the Route 205 bridge (1AMAO004.08). The segment was adjusted during the 2006 cycle to be coincident with VDH-DSS Shellfish Condemnation 001B (11/15/2004) and the Recreation Use impairment switched to Enterococci due to exceedances at 1AMAO004.08.

During the 2008 and 2010 cycles, the segment remained impaired due to Enterococci exceedance at 1AMAO001.36 and at 1AMAO004.08. The exceedance rate was 5/12 during the 2014 cycle at 1AMAO004.08.

The bacterial TMDL for the Mattox Creek Watershed was approved by the EPA on 12/4/2006 and by the SWCB on 7/31/2008; therefore, the segment is considered Category 4A for the Recreation Use.

The impairment length has been adjusted to remain coincident with Mattox Creek shellfish condemnations.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Potomac and Shenandoah River Basins

Cause Group Code: **A31E-06-SF** **Mattox Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 002-001B, 6/15/2019

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 002-001B, 6/15/2019

The segment has been considered impaired of the Shellfish Consumption Use since 1996. The Shellfish TMDL for the Mattox Creek Watershed was developed during the 2008 cycle and was approved by the EPA on 12/4/2006 and the water was considered Category 4A for the Shellfish Use.

However, during the 2010 cycle it was determined that the upper portion of the section is administratively closed as a buffer for the Outdoor World Harborview STP. Therefore the use was considered removed for the upper portion and it was partially delisted.

The advisory was shortened during the 2012 cycle and split into 002-001B and 002-001C, 8/30/2010. It expanded and re-merged in the 2014 cycle. It slightly shrunk and expanded in 2016 and 2018. It shrank further and the condemnation split in the 2020 cycle (portion of VDH-DSS condemnation 002-001B, 5/30/2018 & 002-001C, 5/30/2018).

In the 2022 cycle, the prohibition zone and administrative condemnation zone were removed. The areas are now part of the impaired restricted zone. They will be considered nested. In addition, the condemnation expanded downstream and merged.

Cause Location: From the extent of tide to the mouth of Popes Creek

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: Popes Creek was initially assessed as impaired of the Recreation Use in 2002 based on fecal coliform standard exceedances at 1APOP000.38, which is located off of the George Washington National Monument picnic area. During the 2006 cycle, the fecal coliform rate remained impaired (2/7) and enterococci was added as an impairment (2/6).

During the 2010 cycle, the enterococci exceedance rate was 4/11; the impairment was considered nested because it is contained within the shellfish TMDL study area, which was approved on 6/8/2006.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Cause Location: Mattox Creek from its headwaters to the limit of tide and all nontidal tributaries of Mattox Creek.

Cause City/County: King George County; Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2020 cycle, the nontidal Mattox Creek watershed was impaired of the Recreation Use due to an E. coli exceedance rate of 4/11 at 1AMAO007.46.

However, the TMDL was completed and was adopted by the EPA on 12/4/2006 and by the SWCB on 7/31/2008; therefore, the water is considered Category 4A for the Recreation Use.

New bacteria criteria were implemented in the 2022 cycle. No additional data was collected; however, re-analysis confirmed the impairment due to two or more STV exceedances in the same 90-day period with <10 samples.

In the 2022 cycle, it was determined that the TMDL only addressed the tributaries above the tidal limit, which is also where the listing station is. The tributaries below the tidal limit have been removed from the impaired segment (partially delisted.)

Potomac and Shenandoah River Basins

Cause Group Code: **A32E-01-SF** Cold Harbor Creek

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 004-184A, 3/15/2019

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 004-184A, 3/15/2019

Cold Harbor Creek was mistakenly assessed as impaired in the 1998 cycle due to VDH-DSS Shellfish Condemnation 184A, 6/21/1996. The area had been reopened on 2/10/1997; therefore, it should have been assessed as fully supporting.

The segment was first listed appropriately in the 2004 cycle. The impairment was addressed in the “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” report, which was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008. Allocations were given to nonpoint sources. The segment is considered Category 4A for the shellfish use.

Note - The condemnation expanded in the 2020 cycle. The expansion was outside the TMDL area; it was considered nested and is addressed in fact sheet A32E-03-SF.

In the 2022 cycle, the condemnation shrank back to this TMDL extent and the expansion will be delisted.

Potomac and Shenandoah River Basins

Cause Group Code: **A32E-05-SF** **Buckner Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 082D, 2/10/1997

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH Shellfish Condemnation 004-082B, 4/15/2020

The upper portion of Buckner Creek was assessed as impaired of the Shellfish Use during the 1998 cycle due to VDH shellfish advisory 082D, 2/10/1997. Although the closure was expanded during the 2008 cycle (004-082B 1/27/2006), the 2007 TMDL “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” only addressed the original upstream impaired area, which is classified as Category 4A.

In the 2016 cycle, the condemnation shrank (004-082B, 1/22/2014); the condemned area remained Category 4A and the lower portion was partially delisted (Category 2C.)

The condemnation expanded past the 1997 advisory boundary again in the 2018 cycle. See A32E-07-SF

In the 2020 cycle, it was a portion of VDH Shellfish Condemnation 004-082B, 2/13/2018. The condemned area shrank significantly in the 2022 cycle and became smaller than the TMDL area. The expansion will be delisted; the re-opened part of the TMDL area will be partially delisted.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 005-083A, 2/15/2019

0.36 sq. mile of Lower Machodoc Creek was assessed in 1998 as impaired of the Shellfish Use due to VDH shellfish condemnation 83B, 5/16/1997.

A TMDL was developed based on the 005-083B, 12/28/2007 extent and was approved by the EPA on 12/29/2008 and by the SWCB on 4/28/2009.

The segment has expanded and contracted several times. The condemnation shrank considerably in the 2020 cycle and converted to seasonally condemned. The extension was delisted (Category 2B); the open portion of the TMDL was partially delisted (Category 2C/2B.)

The condemnation shrank again in the 2022 cycle and the impairment was adjusted.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 004-082F, 4/15/2020

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH Condemnation Notice 004-082F, 4/15/2020

Davis Creek was initially listed in the 2008 cycle as impaired of the Shellfish Consumption Use due to VDH condemnation 004-082D, 1/27/2006. During the 2012 cycle, the condemnation expanded and merged with the Nomini Creek impairment; therefore the segment was a portion of VDH Shellfish Condemnation 004-082D, 1/23/2012. The Nomini Creek condemnation shrank and split in the 2016 cycle; Davis Creek remains condemned.

The impairment is considered nested within the Nomini Creek Shellfish TMDL, which was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008.

In the 2022 cycle, a portion of the condemned area was considered administratively closed. The impairment will be partially delisted because the use is considered removed in administratively condemned areas. The restricted area remains impaired.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH Shellfish Condemnation 004-082A, 4/15/2020

The upper portion of North Prong Buckner Creek was assessed as impaired of the Shellfish Use during the 1998 cycle due to a VDH shellfish advisory (082E, 2/10/1997). Although the closure was expanded during the 2008 cycle (004-082A, 1/27/2006), the 2007 TMDL “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” only addressed the original upstream impaired area. The upstream portion of the condemnation was classified as Category 4A, however this lower portion was considered Category 5B; the TMDL was due in 2020.

The impairment was later nested in the North Prong Buckner Creek TMDL and is considered Category 4A.

The condemnation has varied in size. It shrank slightly in the 2022 cycle.

Potomac and Shenandoah River Basins

Cause Group Code: **A32E-26-BAC** Lower Machodoc Creek

Cause Location: Described in VDH condemnation notice 005-083B, 12/28/2007

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2022 cycle, lower Machodoc Creek was impaired of the Recreation Use due to enterococci exceedances at 1ALOW004.77, which is located off Route 618. There were two or more STV exceedances in the same 90-day period with <10 samples.

The impairment is located within the study area for the Lower Machodoc Watershed Shellfish TMDL, which was approved by the EPA on 12/29/2008 and by the EPA on 4/28/2009. As the shellfish TMDL requires the reduction of fecal coliform bacteria in the watershed, the Recreation Use is proposed for nesting (Category 4A).

Potomac and Shenandoah River Basins

Cause Group Code: **A32R-01-DO** **Thompson Branch**

Cause Location: Thompson Branch from its headwaters to the tidal limit.

Cause City/County: Westmoreland County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: Thompson Branch was initially assessed as not supporting the Aquatic Life Use during the 2006 cycle based on dissolved oxygen exceedances at Route 626 (1ATHP001.15), as well as DO exceedances at special study stations in the creek (1/1).

During the 2014 cycle, the segment remained impaired with a DO violation rate of 2/12.

Potomac and Shenandoah River Basins

Cause Group Code: **A32R-02-BAC** Lee Creek

Cause Location: Lee Creek from its headwaters to the tidal limit.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, Lee Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 4/13 at 1ALEC001.18, which is located at the Route 675 bridge.

The stream is located within the Lower Machodoc Creek watershed. A bacterial TMDL was developed for the watershed to address the shellfish consumption use. The TMDL was approved by the EPA on 12/29/2008 and by the SWCB on 4/28/2009. It requires a 93% reduction in fecal coliform bacteria into the Lower Machodoc tidal area. These reductions are expected to be sufficient to address the E. coli impairment in Lee Creek; therefore, the impairment is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Cause Group Code: **A32R-04-BAC** **XCJ - Jones Branch, UT**

Cause Location: Tributary XCJ from its headwaters to its mouth at Jones Branch

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, the tributary was impaired of the Recreation Use due to an E. coli violation rate of 4/13 at 1AXCJ000.54, which is located at the Route 618 bridge.

The stream is located within the Lower Machodoc Creek watershed. A bacterial TMDL was developed for the watershed to address the shellfish consumption use. The TMDL was approved by the EPA on 12/29/2008 and by the SWCB on 4/28/2009. It requires a 93% reduction in fecal coliform bacteria into the Lower Machodoc tidal area. These reductions are expected to be sufficient to address the E. coli impairment in the tributary; therefore, the impairment is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Potomac and Shenandoah River Basins

Cause Group Code: **A32R-05-BAC** **Tavern Run**

Cause Location: Tavern Run from its headwaters to the confluence with Newtons Mill Run.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, Tavern Run was impaired of the Recreation Use due to E. coli violations at 1ATAE002.50, which is located at the Route 615 bridge.

Additional monitoring occurred in the 2014 cycle; the impairment was confirmed with exceedance rates of 8/24 at 1ATAE002.50 and 2/12 at 1ATAE003.85.

A bacterial TMDL was developed for the watershed to address the shellfish consumption use. The TMDL was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008. It requires a 68% reduction in fecal coliform bacteria into the upper Nomini Creek tidal area. These reductions are expected to be sufficient to address the E. coli impairment in the stream; therefore, the impairment is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Cause Group Code: **A33E-01-SF** Gardner Creek

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 006-143A and -E, 6/19/2018

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Number 006-143A, 7/15/2020 VDH-DSS Condemnation Number 006-143S1, 7/15/2020 - seasonally condemned

Gardner Creek was included on the 1998 303(d) list due to VDH condemnation 143, 6/26/1996. The Shellfish Bacterial TMDL for Gardner Creek was developed during the 2010 cycle. The TMDL addressed the maximum extent of the condemnation, which occurred in condemnation 006-143A, 5/5/2005.

The condemnation has expanded and contracted several times. During the 2014 cycle, the condemnation shrank again. The open area was partially delisted (0.0522 mi²) and is considered Category 2C.

Condemnation shrank further in the 2018 cycle.

In the 2022 cycle, the UT which was previously addressed in VDH-DSS Condemnation Number 006-143E, 6/19/2018 converted to seasonally condemned and will be partially delisted. In addition, two portions of condemnation A converted to administratively condemned. The shellfish use is considered removed in those areas and the AU will be partially delisted.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 006-143B and -D, 7/15/2020

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 006-143B and -D, 7/15/2020

The Shellfish Bacterial TMDL for Jackson Creek was approved by the EPA on 7/15/2009 and by the SWCB on 11/14/2009. The TMDL addressed the maximum extent of the condemnation, which occurred in condemnation 006-143B, 5/5/2005.

The condemnation has expanded and contracted several times.

The condemnation shrank in the 2018 cycle and the downstream portion was partially delisted (Category 2C).

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-03-BAC** **Bonum Creek**

Cause Location: The tidal portion of Bonum Creek.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, Bonum Creek was impaired of the Recreation Use due to an enterococci violation rate of 4/12 at 1ABOM000.46, which is located at the end of Rt. 763.

The Bonum Creek Shellfish TMDL was approved by the EPA on 7/15/2009 and by the EPA on 11/14/2009. The TMDL addressed Bonum Creek to its mouth. As this bacterial impairment is located within the study area for the completed TMDL, the Recreation Use is considered nested (Category 4A.)

The impairment was adjusted slightly in the 2018 cycle to remain coincident with the shellfish condemnation. The exceedance rate was 4/11 in the 2018 cycle.

During the 2020 cycle, the shellfish condemnation shrank and the listing station was now outside of the condemnation. The Recreation Use impairment was adjusted to end at the mouth of Bonum Creek.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; however, re-analysis of the 2018 data confirms impairment due to two or more STV exceedances within the same 90-day period with <10 samples.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 006-143C, 7/15/2020

Bonum Creek was included on the 1998 303(d) list due to VDH Condemnation 159, 4/27/1989. The Shellfish Bacterial TMDL for Bonum Creek was approved by the EPA on 7/15/2009 and by the SWCB on 11/14/2009. The TMDL addressed the maximum extent of the condemnation, which occurred in condemnation 006-143C, 5/5/2005. The upstream portion of this area remained impaired in the 2010 condemnation (006-143C, 5/19/2008); however, the downstream portion was opened for harvest and was partially delisted and considered Category 2C.

The condemnation shrank further in the 2018 and 2020 cycles.

Cause Group Code: **A33E-04-BAC** Lodge Creek

Cause Location: Lodge Creek from its tidal limit to the downstream extent of VDH-DSS condemnation 007-028F, 5/12/1997

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/5A

Cause Description: Lodge Creek from its tidal limit downstream to the end of VDH-DSS condemnation 007-028F, 7/21/2004 has been assessed as not supporting the Recreation Use due to enterococci exceedances at 1ALOG001.20, which is located at the end of Route 712. The segment was expanded during the 2008 cycle to align the boundary with the 5/12/1997 impairment.

During the 2020 cycle, the violation rate was 6/36.

New bacteria criteria were implemented in the 2022 cycle. There is insufficient information to assess the criteria; therefore, the impairment is carried over.

Note: The bacteria TMDL for shellfish impairments in the Yeocomico River watershed was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009. Section 028F was addressed in the report. However, the Recreation Use impairment cannot be nested because the Callao WWTP was not addressed in the TMDL.

Cause Group Code: **A33E-05-SF** **White Point Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 007-028C, 10/15/2020

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 007-028C, 10/15/2020

White Point Creek was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028B, 5/12/1997 (A33E-05-SF). The condemnation grew during the 2008 cycle (007-028B, 12/12/2006); however, only the original 1998 portion was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

However, during the 2012 cycle, the entire segment was open for harvest on the 11/1/2010 condemnation; therefore the segment was delisted.

A portion of the area closed again in the 2018 cycle. The open portion remains Category 2C.

Condemnation shortened again in the 2020 cycle.

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-07-SF** **Hampton Hall Branch, Kinsale Branch**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnations VDH-DSS Shellfish Condemnation 007-028A and -028B, 10/15/2020 and -028E, 10/2/2018

Cause City/County: Northumberland County; Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 007-028A and -028B, 10/15/2020

The West Yeocomico River (including Hampton Hall Branch and Kinsale Branch) was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028C, 5/12/1997. The original 1998 portion was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009. This portion was considered as Category 4A.

The segment shortened dramatically during the 2012 cycle and split into two separate condemnations - Kinsale Branch and Hampton Hall Creek. These areas remained Category 4A. The remainder of the 1998 extent was partially delisted (Category 2C).

The condemnation extended to the TMDL extent in the 2016 cycle.

It shrank and split in the 2020 cycle based on 007-028, 10/2/2018. Condemnations B and D remain closed (Category 4A.) The portion within 007-028S39 is seasonally condemned and was partially delisted (Category 2C/2B.) Condemnation E is now administratively condemned and was partially delisted; the use is considered removed.

In the 2022 cycle, 007-028B expanded slightly. 007-028E 10/2/2018 converted to seasonally condemned (a portion of 007-028S39, 10/15/2020) and will be partially delisted (Category 2C/2B.)

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 007-225B, 10/15/2020

The upper part of Mill Creek was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028E, 5/12/1997. The impairment was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009. This original segment is considered Category 4A.

The Mill Creek condemnation is now smaller than the 1998 area. The upstream portion remains impaired (Category 4A); the lower portion was considered a partial delist (Category 2C.)

The condemnation has vacillated in size over numerous cycles.

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH-DSS Shellfish Condemnation 007-225A, 10/15/2020

A portion of Lodge Creek was assessed as impaired of the Shellfish Use in 1998 due to VDH condemnation 028F, 5/12/1997. It was subsequently addressed in the bacteria TMDL for shellfish impairments in the Yeocomico River Watershed, which was approved by the EPA on 6/8/2006.

However, during the 2010 cycle, it was determined that the upper portion of the condemnation (007-028E, 11/10/2008) is an administrative closure. Therefore the use was considered removed and the upper portion was partially delisted. The downstream portion remains impaired and is considered Category 4A.

During the 2012 cycle, the condemnation shrank and the downstream-most portion was converted to seasonally condemned; therefore, it was partially delisted.

The condemnation shrank again during the 2018 cycle (Category 4A/2C).

Cause Group Code: **A33R-01-BAC** Mill Creek

Cause Location: From its headwaters to the tidal limit.

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2002 cycle, Mill Creek was assessed not supporting of the Recreation Use goal based on fecal coliform exceedances at Route 202 (1AMIA004.12).

During the 2010 cycle, the E. coli violation rate at 1AMIA004.12 was 1/6 (insufficient information for assessment). However, there was additional monitoring downstream at 1AMIA002.34 which showed impairment (2/6). The segment remained listed and was extended downstream to the tidal limit; the impairment converted to E. coli.

In the 2018 cycle, the E. coli exceedance rates were 3/12 at 1AMIA002.34 and 6/24 at 1AMIA004.12.

The Bacteria TMDL for (non-tidal) Mill Creek was approved by the EPA on 7/30/2010 and by the SWCB on 12/13/2010.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; however, the data within the 2022 data window were re-analyzed using the new criteria. The impairment is confirmed at 1AMIA004.12 due to two or more STV exceedances within the same 90-day period with <10 samples. There is insufficient data to assess station 1AMIA002.34; therefore, the impairment is carried over at that station.

Cause Group Code: **A34E-04-SF** **XFJ - Coan River, UT (aka Cellars Cove)**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 008-214C, 4/15/2020

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 008-214C, 4/15/2020

A portion of the tributary was listed in the 1998 cycle due to condemnation 145G, 2/25/1997. The shellfish condemnation for this segment was included in “Coan River Watershed Total Maximum Daily Load (TMDL) Report for Six Shellfish Areas”, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/02/2004. The condemnation size has been adjusted through several cycles; however, during the 2012 cycle the condemnation shrunk and it currently matches the 1998 impairment. It is considered Category 4A.

Note: Although the 1998 portion of the tributary is shown on the TMDL map, the TMDL used station 8-33 which is near the mouth of the creek instead of station 8-34, which was located within the 1998 impairment.

Cause Group Code: **A34E-05-BAC** **Coan River**

Cause Location: Coan River mainstem within VDH Shellfish Condemnation Number 145I, 2/25/1997

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, the uppermost portion of the Coan River was assessed as impaired of the Recreation Use due to an enterococci exceedance rate of 2/12 at 1ACOA004.12, which is located at a private dock at the end of Route 629. As the impairment is located within the study area for the Shellfish bacterial TMDL for the Coan River which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004, the impairment is considered nested (Category 4A).

A portion of nontidal Coan Mill Stream was impaired of the Recreation Use since the 2002 cycle based on E. coli exceedances at 1ACON000.96 (old fact sheet A34R-01-BAC). In the 2014 cycle, it was determined that this station is actually tidally influenced. The impairment is now a part of A34E-05-BAC. The enterococci exceedance rate was 12/24 during the 2014 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

 Portion of VDH-DSS Condemnation 008-214S6, 4/15/2020

Mill Creek and the upstream most portion of the Coan River were assessed as impaired of the Shellfish Use in 1998 because of VDH SFC 145I, 2/25/1997. The impairment expanded in several assessment cycles. However only the original segment was included in “Coan River Watershed Total Maximum Daily Load (TMDL) Report for Six Shellfish Areas”, which was completed during the 2006 cycle and approved by the EPA on 12/18/2003 and by the SWCB on 12/02/2004.

During the 2016 cycle, the condemnation shrank significantly and is now smaller than the TMDL extent. The condemned segment is classified as Category 4A; the newly opened portion was partially delisted (Cat 2C).

The condemnation shrank further in the 2020 cycle. It shrank again and split in the 2022 cycle. A portion of Mill Creek was partially delisted.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 009-141A, 6/15/2020

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 009-141A, 6/15/2020

Cod Creek was included on the 1998 303(d) list due to VDH Condemnation 141A, 1/31/1997. The Shellfish TMDL for Cod Creek was developed based on the maximum extent of the impairment (1/31/1997). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, Cod Creek is considered Category 4A.

The condemnation shrank slightly during the 2014 cycle and the lower portion was partially delisted (Category 2C).

The condemnation extent has varied slightly but remains smaller than the 1997 extent.

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnations 009-142A, -B, and -E, 6/15/2020

A portion of Hull Creek was listed as impaired of the Shellfish Use in the 1998 cycle because of VDH-DSS Shellfish Condemnation 142A, 1/31/1997.

The Shellfish TMDL for Hull Creek was developed based on the maximum extent of the impairment (8/21/2000). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, Hull Creek is considered Category 4A.

The condemnation subsequently shrank and split segments. Closed segments remain Category 4A; the remainder (including Spring Cove) was partially delisted (Category 2C).

The condemnation grew slightly in the 2018 cycle and Spring Cove was relisted.

Cause Description: VDH Shellfish Condemnation 010-105G, 7/15/2020 VDH Shellfish Condemnation 010-105S86, 7/15/2020 - seasonally condemned

Cod Creek was assessed as impaired during the 1998 cycle because of VDH-DSS Shellfish Condemnation 105B, 6/10/1997. The TMDL was adopted by the EPA on 12/18/2003 and the SWCB on 12/2/2004. The impairment shortened during the 2012 cycle and a portion of the impairment was partially delisted.

The impairment expanded in the 2014 and 2016 cycles (see fact sheet A34E-11-SF). It shrunk back to the TMDL extent in the 2018 cycle.

The condemnation shrank further in the 2020 cycle and the lower portion is seasonally condemned and was partially delisted (Category 2C/2B.)

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH Shellfish Condemnation 010-105A, 7/15/2020

This segment of the Little Wicomico River was assessed as impaired in 1998 based on VDH SFC 105B 6/10/1997.

The Little Wicomico River Shellfish TMDL was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

The condemnation extent has expanded and contracted in multiple cycles. It is currently smaller than the 1997 / TMDL extent. The impaired portion is Category 4A; the opened/seasonally condemned areas are Category 2C.

Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-16-SF2** **Little Wicomico River**

Cause Location: VDH-DSS Condemnation 010-105E, 010-105F, and -010-105H, 7/15/2020 not listed in 1998

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 010-105E, 010-105F, and -010-105H, 7/15/2020

A segment of the Little Wicomico River was assessed as impaired in 1998 based on VDH SFC 105B 6/10/1997. During the 2004 cycle, the segment expanded and has subsequently expanded and contracted during various assessment cycles. However, the 2003 TMDL only covered the original 1998 impaired section, which is classified as Cat. 4A. The TMDL for the expansion was due in 2016.

During the 2016 cycle, condemnation 010-105A, 6/9/2014 expanded considerably and several impairments were merged (A34E-16-SF2 and A34E-30-SF). The impairment is considered nested within the upstream Little Wicomico River Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

The condemnation shortened and split in the 2018 cycle; in addition, a seasonally condemned portion (010-105M4) was split off and partially delisted.

In the 2020 cycle, the condemnation shrank further and the mainstem Little Wicomico River condemnation (010-105A, 6/26/2018) is now smaller than the TMDL extent. The tributaries remain listed.

Cause Location: Described in VDH condemnation 010-105B and 010-105L, 6/26/2018 (open in the 1998 cycle)

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 010-105B, 7/15/2020

A small portion of the segment was listed in the 2006 cycle due to condemnation 010-105C, 9/15/2004. The segment expanded and merged with another condemnation during the 2008 cycle. Although the other condemnation was listed in 1998 and was later addressed in the Shellfish TMDL approved by the EPA on 12/18/03, this AU represented the portion of the condemnation which was not included in the 2003 TMDL.

The condemnations shrank during the 2020 cycle. In addition, a portion was converted to seasonally condemned and was partially delisted.

The condemned area shrank further in the 2022 cycle and is now limited to one condemnation.

The impairment is considered nested within the Bridge Creek Shellfish TMDL, which was approved by the EPA on 12/18/2003.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-A34E_BRI01C98 / Bridge Creek / Described in VDH condemnation 010-105B, 7/15/2020. Shrank in the 2022 cycle. CB5MH	4A	Fecal Coliform	2006	L	0.087

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 010-105D, -105J, and -105K, 7/15/2020 VDH-DSS Condemnation 010-105S13, 7/15/2020 - seasonally condemned

Bridge Creek was impaired of the Shellfish Consumption Use during the 1998 cycle due to VDH-DSS condemnation 180, 6/10/1997. The segment was delisted in 2004 because the area was reopened for harvest, but was closed again in the 2006 cycle.

The segment received a fecal coliform allocation in the “Little Wicomico River Watershed TMDL for Three Shellfish Areas Listed Due to Bacteria Contamination” report which was approved by the EPA on 12/18/2003; therefore, it is considered Cat. 4A for shellfish consumption.

The condemned areas have expanded and contracted over several cycles. The restricted areas are currently smaller than the TMDL area are considered Category 4A. Re-opened and seasonally condemned areas are considered Category 2C and Category 2C/2B, respectively.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-31-BAC** Little Wicomico River

Cause Location: Tidal extent to mouth

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: In the 2006 cycle, the upper tidal portion of the Little Wicomico River was considered impaired of the Recreation Use due to enterococci exceedances at 1ALIS004.20, which is located off the mouth of Spences Creek. The enterococci violation rate was 4/26 during the 2012 cycle.

It was shortened in the 2018 cycle to remain coincident with the shellfish closure since that limit is more stringent.

In the 2020 cycle, monitoring at 1ALIS002.00 was unacceptable (4/36); therefore, the impairment was extended to include the mainstem of the Little Wicomico River.

New bacteria criteria were implemented in the 2022 cycle. The segment remains impaired at 1ALIS002.00 due to two or more STV exceedances in the same 90-day period with <10 samples. No additional data has been collected at 1ALIS004.20.

The impairment is considered nested because it is located within the tidal excursion of the upstream Little Wicomico River Shellfish TMDL. The TMDL was approved on 12/18/2003 and by the SWCB on 12/2/2004.

Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-36-BAC** **Hack Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 009-161B, 4/27/2018

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, Hack Creek was impaired of the Recreation Use due to an enterococci exceedance rate of 2/11 at 1AHAC000.96, which is located off of Route 644.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

The Shellfish TMDL for Hack Creek was developed based on the maximum extent of the impairment (009-161B, 3/14/2007) and was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010. Because the impairment is within the TMDL study area, the Recreation Use is considered nested (Category 4A).

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-36-SF** **Hack Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 009-161B, 4/27/2018

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 009-161B, 4/27/2018

Hack Creek was designated as a non-productive shellfish growing area by VDH-DSS in previous summaries, so the use had been considered removed. However, during the 2008 cycle, it was determined that VDH considers the water condemned; therefore, Hack Creek was assessed as impaired (161, 4/27/1989.)

The Shellfish TMDL for Hack Creek was developed based on the maximum extent of the impairment (009-161B, 3/14/2007). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, the creek is considered Category 4A.

Cause Location: Described in VDH-DSS condemnation 010-105I, 7/15/2020

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 010-105I, 7/15/2020

Sloop Creek re-closed in the 2022 cycle. The impairment is proposed for nesting within the upstream Little Wicomico River Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

Potomac and Shenandoah River Basins

Cause Group Code: **A34R-02-BAC** **Little Wicomico River**

Cause Location: The nontidal portion of Little Wicomico River.

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The nontidal portion of the Little Wicomico River was impaired of the Recreation Use in the 2018 cycle due to an E. coli exceedance rate of 4/13 at 1ALIS007.20.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

The segment is within the TMDL study area for the Little Wicomico River Watershed Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004. It is considered nested (Category 4A.)

Potomac and Shenandoah River Basins

Cause Group Code: **A34R-02-PH** **Little Wicomico River**

Cause Location: The nontidal portion of Little Wicomico River.

Cause City/County: Northumberland County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: The nontidal portion of Little Wicomico River was initially considered not supporting the Aquatic Life Use during the 2006 cycle due to a pH exceedance rate of 2/11 at 1ALIS007.20, located at the Route 646 bridge.

During the 2008 cycle, the exceedance rate increased to 3/13.

The exceedance rate was 3/10 in the 2018 cycle.

Potomac and Shenandoah River Basins

Cause Group Code: **A34R-03-DO** **XLL - Coan Mill Stream, UT**

Cause Location: The unnamed tributary in its entirety.

Cause City/County: Northumberland County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: During the 2010 cycle, the tributary was assessed as not supporting of the Aquatic Life Use due to dissolved oxygen violations at 1AXLL000.92, which is located west of Route 301.

The exceedance rate was 2/12 during the 2012 cycle.

Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: B32R-01-BEN South River

Cause Location: South River from its confluence with Back Creek downstream to its confluence with the North River. (Impairment was lengthened in 2012)

Cause City/County: Augusta County; Rockingham County; Waynesboro

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: This segment is impaired due to exceedances of the General Standard for Benthics at stations: 1BSTH02.14 (Reserve Judgment for VSCI in 2022: shows improvement, two consecutive supporting samples, taken over a two year period, are needed to consider delisting the aquatic life use impairment.); 1BSTH012.71 (Impaired for VSCI, no new data 2022); 1BSTH021.59 (VSCI showing improvement in 2022 but a minimum of two consecutive supporting samples, taken over a two year period, are needed to consider delisting the aquatic life use impairment.) and 1BSTH027.08 (Supporting for VSCI overall in 2022 but a minimum of two consecutive supporting samples, taken over a two year period, are needed to consider delisting the aquatic life use impairment.). Initial Listing Date: 1996. This impairment is included in the EPA approved South River benthic TMDL.

Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: B32R-02-HG South River/South Fork Shenandoah River/North Fork Shenandoah River/Shenandoah River

Cause Location: South River from the INVISTA discharge downstream to its confluence with the South Fork Shenandoah River; the entire South Fork Shenandoah River; North Fork Shenandoah River from old Riverton Dam (removed) downstream to its confluence with the South Fork Shenandoah River; and the Shenandoah River to its confluence with Craig Run.

Cause City/County: Augusta County; Clarke County; Page County; Rockingham County; Warren County; Waynesboro

Use(s): Fish Consumption

Causes(s)/VA Category: Mercury in Fish Tissue/4A

Cause Description: This segment is impaired due to the presence of Hg in fish tissue at stations: 1BSTH004.21 (4 samples of Hg (Redbreast Sunfish, Lmouth Bass (2) & Wh. Sucker) 2005); 1BSTH002.14- 2 samples in 2022 (redbreast sunfish and smallmouth bass); 1BSTH020.44 (2 samples of Hg (Lmouth Bass & Wh. Sucker) 2005); 1BSTH022.75 (3 samples of Hg (Lmouth Bass (2) and White Sucker) 2005); 1BSTH023.73 (5 samples of Hg in Redbreast Sunfish, 3 samples in Largemouth Bass and 1 sample in Smallmouth Bass 2005); 1BSTH025.10 (2 samples of Hg (Redbreast Sunfish & Largemouth Bass-2005); 1BSSF096.03 (3 samples of Hg in fallfish, redbreast sunfish, smallmouth bass, 2020); 1BSSF078.24 (4 samples Hg in fish 2020-Channel catfish, smallmouth bass, redbreast sunfish, white sucker); 1BSSF063.17 (5 fish Hg samples-smallmouth bass, redbreast sunfish, white sucker, northern hogsucker, channel catfish, 2020); 1BSSF037.60 (3 samples of Hg in smallmouth bass, channel catfish, redbreast sunfish- 2020); 1BSSF010.33 (4 samples of Hg in channel catfish, smallmouth bass, redbreast sunfish, and white sucker, 2020); 1BSSF000.19 (three samples of Hg in smallmouth bass, redbreast sunfish, and channel catfish-2020); 1BNFS000.57 (two samples of Hg in largemouth bass and channel catfish, 2020); 1BSHN053.63 (5 samples of Hg in largemouth bass, redbreast sunfish, carp, channel catfish, & rock bass- 2020); 1BSHN028.15 (3 samples of Hg in carp, channel catfish, and smallmouth bass- 2020); 1BSHN038.27 (5 samples of Hg in smallmouth bass, walleye, redbreast sunfish, carp, & channel catfish-2020). Initial Listing Date: 1998. Included in the EPA approved South Fork Shenandoah River Mercury (Fish Tissue) TMDL. Within a VDH Fish Consumption Advisory for Mercury Contamination, effective 5/17/89; modified 12/13/04. Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: **B57R-01-BEN** **Spout Run**

Cause Location: Spout Run from its confluence with Page Brook Run downstream to its confluence with the Shenandoah River.

Cause City/County: Clarke County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: This segment is impaired due to exceedances of the General Standard for Benthics at station: 1BSPR000.40 (Impaired for VSCI). Additional data collected at 1BSPR003.13 (Impaired for VSCI). Initial Listing Date: 1998. This impairment is included in the EPA Approved Spout Run benthic TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Potomac and Shenandoah River Basins

Cause Group Code: **CB5MH-DO-BAY** Chesapeake Bay segment **CB5MH-VA**

Cause Location: This area encompasses the complete CBP segment CB5MH_VA.

Cause City/County: Chesapeake Bay - County Not Applicable; Lancaster County; Northumberland County

Use(s): Aquatic Life; Deep-Channel Seasonal Refuge; Deep-Water Aquatic Life; Open-Water Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/4A

Cause Description: The Chesapeake Bay Water Quality Standards were implemented during the 2006 cycle. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria.

In the 2020 cycle, CB5MH failed the 30-day summer Open Water dissolved oxygen criteria. The rest-of-year 30-day mean criteria was met and there is insufficient information to assess other frequencies.

The estuary passes both the summer and rest-of-year criteria in the 2022 cycle and the subuse will be partially delisted.

The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010; therefore, CB5MH is considered Category 2C.

Applicable portions of the mesohaline Chesapeake Bay estuary and applicable small tributaries fail the Deep Water- and Deep Channel dissolved oxygen criteria (Category 4A.)

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Potomac and Shenandoah River Basins

Cause Group Code: **CB5MH-SAV-BAY** Chesapeake Bay segment CB5MH

Cause Location: This cause encompasses the complete CBP segment CB5MH.

Cause City/County: Chesapeake Bay - County Not Applicable; Lancaster County; Northumberland County

Use(s): Aquatic Life; Shallow-Water Submerged Aquatic Vegetation

Causes(s)/VA Category: Aquatic Plants (Macrophytes)/4A

Cause Description: The Chesapeake Bay Water Quality Standards were implemented during the 2006 cycle. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria.

Chesapeake Bay segment CB5MH is impaired of the Aquatic Life due to inadequate submerged aquatic vegetation acreage. The Submerged Aquatic Vegetation goal is 7,633 acres but only 36% was attained found in the most recent 3 years according to aerial analysis of SAV. Only 69% of the water clarity goal was met according to 2013 and 2014 Dataflow surveys.

Chesapeake Bay segment CB5MH

Aquatic Life

Aquatic Plants (Macrophytes) - Total Impaired Size by Water Type:

Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
2.688		

Chesapeake Bay segment CB5MH

Shallow-Water Submerged Aquatic Vegetation

Aquatic Plants (Macrophytes) - Total Impaired Size by Water Type:

Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
2.688		

Sources: Agriculture; Atmospheric Deposition - Nitrogen; Clean Sediments; Industrial Point Source Discharge; Internal Nutrient Recycling; Loss of Riparian Habitat; Municipal Point Source Discharges; Non-Point Source; Sediment Resuspension (Clean Sediment); Source Unknown; Sources Outside State Jurisdiction or Borders; Wet Weather Discharges (Point Source and Combination of Stormwater, SSO or CSO)

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: POTMH-SAV-BAY Potomac Mesohaline Embayments

Cause Location: Includes all waters in the mesohaline portion of the Potomac River (POTMH).

Cause City/County: King George County; Northumberland County; Westmoreland County

Use(s): Aquatic Life; Shallow-Water Submerged Aquatic Vegetation

Causes(s)/VA Category: Aquatic Plants (Macrophytes)/4A

Cause Description: The mesohaline portion of the Potomac River failed the Submerged Aquatic Vegetation acreage standards during the 2006 - 2022 cycles.

There was insufficient information to assess the water clarity acreage.

The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010; therefore, the segment is Category 4A.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A30E_DEE01A00 / Deep Creek / Segment includes the downstream portion of Deep Creek to the confluence with UMC within the admin condemnation boundaries described in the VDH Notice and Description of Shellfish Area Condemnation Number 001A-36, Upper Machodoc Creek, Section D, effective June 15, 2019. Portion of CBP segment POTMH.	4A	Aquatic Plants (Macrophytes)	2006	L	0.019
VAN-A30E_GAM01A02 / Gambo Creek / The Gambo Creek portion of the condemned area described in VDH Notice and Description of Shellfish Area Condemnation Number 001A-36, Upper Machodoc Creek, Section A, effective June 15, 2019. Portion of CBP segment POTMH.	4A	Aquatic Plants (Macrophytes)	2006	L	0.163
VAN-A30E_UMC01A02 / Upper Machodoc Creek / Segment includes Upper Machodoc Creek within the condemned boundaries described in the VDH Notice and Description of Shellfish Area Condemnation Number 001A-36, Upper Machodoc Creek, Section F, effective June 15, 2019. Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

Potomac and Shenandoah River Basins

Cause Group Code: POTTF-DO-BAY Potomac Tidal Fresh Embayments

Cause Location: Includes all waters in the tidal fresh portion of the Potomac River (POTTF).

Cause City/County: Alexandria; Arlington County; Fairfax County; Prince William County; Stafford County

Use(s): Aquatic Life; Migratory Fish Spawning and Nursery; Open-Water Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/4A

Cause Description: An open water assessment of dissolved oxygen values during the summer season showed that segment POTTF was not supporting. The POTTF was 0.01 percent above CFD. The segment is considered impaired for the aquatic life use.

The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010 (Fed IDs 40920, 40921, 40922).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A12E_FOU01A00 / Four Mile Run / Segment includes the tidal waters of Four Mile Run; from rivermile 1.46 downstream until the confluence with the Potomac River, at the state line. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.050
VAN-A12E_POT01A16 / Potomac River / Segment includes all tidal Virginia water adjacent to Alexandria, from Second Street to King Street. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2016	L	0.047
VAN-A13E_HFF01A06 / Hooff Run / Segment contains the tidal portion of Hooff Run; begins at the Alexandria National Cemetery and continues downstream until the confluence with Hunting Creek. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.003
VAN-A13E_HUT01A02 / Hunting Creek / Segment includes all tidal waters of Hunting Creek; beginning at the Route 241 (Telegraph Road) bridge crossing and continuing downstream until the mouth of the embayment, at Jones Point and Belle View. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.529
VAN-A14E_DOU01A00 / Dogue Creek / Segment includes all tidal waters of Dogue Creek, extending from approximately rivermile 2.1 until the confluence with the Potomac River. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.736
VAN-A14E_LIF01A00 / Little Hunting Creek / Segment includes all tidal waters of Little Hunting Creek, extending from approximately rivermile 1.7 downstream until the confluence with the Potomac River. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.250
VAN-A14E_POT01A08 / Potomac River / Segment includes all tidal waters downstream of the mouth of the Hunting Creek embayment, at Jones Point and Belle View. Portion of CBP segment POTTF.	4A	Dissolved Oxygen	2014	L	0.848

James River Basin

Cause Group Code: **APPTF-SAV-BAY** **Appomattox River**

Cause Location: Tidal Appomattox River Estuary

Cause City/County: Chesterfield County; Colonial Heights; Hopewell; Petersburg; Prince George County

Use(s): Aquatic Life; Shallow-Water Submerged Aquatic Vegetation

Causes(s)/VA Category: Aquatic Plants (Macrophytes)/4A

Cause Description: The Chesapeake Bay Water Quality Standards were adopted during the 2006 cycle. During the 2008 cycle, the Appomattox River Tidal Fresh segment (APPTF) failed the Submerged Aquatic Vegetation acreage requirements, and the water clarity Acreage criteria.

During the 2012 cycle, the Appomattox River Tidal Fresh segment (APPTF) failed the Submerged Aquatic Vegetation acreage requirements, and the water clarity Acreage criteria. But the Bay TMDL was Completed and is Cat 4A.

During the 2014 cycle, the Appomattox River Tidal Fresh segment (APPTF) failed the Submerged Aquatic Vegetation acreage requirements, and the water clarity Acreage criteria. But the Bay TMDL was Completed and is Cat 4A.

During the 2016 cycle, the Appomattox River Tidal Fresh segment (APPTF) failed the Submerged Aquatic Vegetation acreage requirements, and the water clarity Acreage criteria. But the Bay TMDL was Completed and is Cat 4A.

During the 2018, 2020 and 2022 cycle, the Appomattox River Tidal Fresh segment (APPTF) failed the Submerged Aquatic Vegetation acreage requirements, and the water clarity Acreage remained impaired due to no new data. But the Bay TMDL was Completed and is Cat 4A.

James River Basin

Cause Group Code: **CHKOH-DO-BAY** **Chickahominy River**

Cause Location: The oligohaline Chickahominy River and its tidal tributaries.

Cause City/County: Charles City County; James City County; New Kent County

Use(s): Aquatic Life; Open-Water Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/4A

Cause Description: During the 2006 cycle, the Chesapeake Bay Water Quality Standards were adopted. The oligohaline Chickahominy River estuary failed the summer 30-day mean dissolved oxygen criteria in the 2022 cycle.

The Chesapeake Bay TMDL was approved on 12/29/2010; therefore, it is Cat. 4A.

James River Basin

Cause Group Code: **ELIPH-DO-BAY** Chesapeake Bay segment **ELIPH (Elizabeth River Mainstem)**

Cause Location: This cause encompasses the complete CBP segment ELIPH.

Cause City/County: Norfolk; Portsmouth

Use(s): Aquatic Life; Open-Water Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/4A

Cause Description: The Aquatic Life and Open-Water Aquatic Life Use is impaired based on failure to meet the dissolved oxygen criteria for Open Water - Summer. The Aquatic Life and Open-Water Aquatic Life Use for “Rest of Year, ROY” is supporting. EPA approved Chesapeake Bay TMDL 12/29/2010.

James River Basin

Cause Group Code: **G01E-01-BAC James River**

Cause Location: Estuarine James River from the fall line at Mayos Bridge downstream to the Appomattox River.

Cause City/County: Charles City County; Chesterfield County; Henrico County; Hopewell; Prince George County; Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River from the fall line to the Appomattox River was initially assessed as not supporting of the Recreation Use based on the results of a summer special study in the fall zone. The special study was designed to monitor the effects of summertime rain and combined sewer overflow (CSO) events on water quality in the James River and to monitor the effects of Richmond's CSO abatement efforts. The segment has been included on the Impaired Waters list for fecal coliform since 1996.

During the 2004 and 2006 cycles, the bacteria standard changed to E.coli for those stations with enough data. During the 2008 cycle, the impairment converted solely to E. coli.

The James River and Tributaries - City of Richmond Bacterial TMDL was approved by the EPA on 11/4/2010. The river is considered Category 4A.

Bacteria impairment was noted at multiple stations in the river during the 2020 cycle. The lower portion of the segment showed acceptable levels; however, the segment extent remained unchanged until additional monitoring could confirm in the next cycle.

2-JMS110.30 - 8/65 2-JMS109.16 - 3/10 2-JMS104.16 - 9/63 2-JMS099.30 - 8/64 2-JMS087.11 - 0/1 (W)
 2-JMS087.01 - 5/62 (S)

New bacteria criteria were implemented in the 2022 cycle. The upper portion remains impaired due to geometric mean and STV exceedances at multiple DEQ and citizen monitoring stations. There is insufficient information to assess the criteria in the lower segment; therefore, the impairment is carried over.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: G01E-02-EBEN James River

Cause Location: Mainstem James River from the previous limit of PWS near Dutch Gap downstream to 5 miles above City Point Hopewell and from Buoy 74 at Brandon Point (rivermile 55.94) to the tidal freshwater/oligohaline boundary at approximately river mile 52.08.

Cause City/County: Charles City County; Chesterfield County; Henrico County; Hopewell; Prince George County; Richmond; Surry County

Use(s): Aquatic Life

Causes(s)/VA Category: Estuarine Bioassessments/5A

Cause Description: During the 2012-2016 cycles, the mainstem of the tidal freshwater James River was impaired of the Aquatic Life Use due to an inadequate benthic community based on the Chesapeake Bay Benthic Index of Biological Integrity.

In addition, there was benthic alteration at 2010 Coastal 2000 stations 2CJMS055.04 and 2CJMS084.70, which were considered Category 5A. The source is “possibly cumulative chronic effects of metals and PAHs in the sediment”.

The JMSTFa B-IBI segment met the goal in the 2018 cycle. The impairment was shortened to those areas around the two Coastal 2000 stations. The remainder was partially delisted.

The segment failed again in the 2022 cycle and the extent was expanded again.

James River Basin

Cause Group Code: G01E-03-PCBFT James River and Various Tributaries

Cause Location: Estuarine James River from the fall line to the Hampton Roads Bridge Tunnel, including several tributaries listed below.

Cause City/County: Charles City County; Chesapeake; Chesterfield County; Colonial Heights; Dinwiddie County; Hampton; Henrico County; Hopewell; Isle Of Wight County; James City County; New Kent County; Newport News; Norfolk; Petersburg; Portsmouth; Prince George County; Richmond; Suffolk; Surry County; Williamsburg

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: During the 2002 cycle, the James River from the fall line to Queens Creek was considered not supporting of the Fish Consumption Use due to PCBs in several fish species at multiple DEQ monitoring locations.

During the 2004 cycle, a VDH Fish Consumption Restriction was issued from the fall line to Flowerdew Hundred and the segment was adjusted slightly to match the restriction. In addition, in the 2004 cycle, the Chickahominy River from Walkers Dam to Diascund Creek was assessed as not supporting of the Fish Consumption Use because the DEQ screening value for PCBs was exceeded in three species during 2001 sampling st 2-CHK023.64.

The VDH restriction was extended on 12/13/2004 to stretch from the I-95 bridge downstream to the Hampton Roads Bridge Tunnel and include the tidal portions of the following tributaries: Appomattox River up to Lake Chesdin Dam Bailey Creek up to Route 630 Bailey Bay Chickahominy River up to Walkers Dam Skiffes Creek up to Skiffes Creek Dam Pagan River and its tributary Jones Creek Chuckatuck Creek Nansemond River and its tributaries Bennett Creek and Star Creek Hampton River Willoughby Bay and the Elizabeth R. system (Western, Eastern, and Southern Branches and Lafayette R.) and tributaries St. Julian Creek, Deep Creek, and Broad Creek

The advisory was modified again on 10/10/2006 to add Poythress Run.

The impairments were combined. The TMDL for the lower extended portion is due in 2018.

PCB sampling in 2012 showed exceedances in four species (sp) at 2-JMS087.01, three sp at 2-JMS097.77, four sp at 2-JMS110.00, two sp at 2-PTH000.23, two sp at 2-BLY000.65, three sp at 2-JMS074.44, two sp at 2-JMS066.88, two sp at 2-JMS057.69, and three sp at 2-JMS052.67, among others.

Additional sampling occurred in 2016. The results are as follows:

2-JMS110.00 - 7 sp 2-JMS097.77 - 4 sp 2-JMS074.44 - 4 sp 2-JMS066.88 - 3 sp 2-JMS049.00 - 1 sp 2-CHK002.17 - 2 sp

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G01L-01-CHLA** **Falling Creek Reservoir**

Cause Location: Falling Creek Reservoir headwaters to dam

Cause City/County: Chesterfield County; Richmond

Use(s): Aquatic Life

Causes(s)/VA Category: Chlorophyll-a/5A

Cause Description: The lake was subject to historical chronic problems resulting from nutrients and organic loadings. It was listed in 1998 as not supporting the Public Water Supply use and threatened of the ALUS.

During the 2006 cycle, monitoring showed acceptable DO in the epilimnion, but showed depressed DO in the hypolimnion during stratification. The TSIs were:

TSI(CA) = 53 TSI(TP) = 59 TSI(SD) = 63

Although the secchi depth TSI exceeded the limit of 60, the Chlorophyll a and phosphorus TSIs were acceptable (mesotrophic); these are considered more reliable since an elevated secchi depth TSI may be due to inorganic turbidity and not an indication of excessive nutrients. Since the PWS Use for Falling Creek has been removed from the WQS and the TSIs meet acceptable limits the lake should be delisted for PWS. However due to the depressed dissolved oxygen in the bottom, the segment should be classified as Category 4C due to natural stratification; the segment is first listed for DO in 2006.

During the 2008 cycle the lake criteria was developed and the lake is fully supporting for DO and will be DELISTED.

During the 2012 cycle the segment became impaired for DO with a pooled violation rate of 11/60 at stations 2-FAC005.78, and 2-FAC003.85.

There was no new data for the 2014 cycle

During the 2018 cycle station 2-FAC003.85 Chlorophyll a is impaired with an exceedance rate of 2/2

No new data was collected in 2020 and 2022 cycle so the segment remains impaired.

James River Basin

Cause Group Code: **G01R-01-BAC** Goode Creek

Cause Location: Goode Creek from the confluence with Broad Rock Creek to its mouth at the James River.

Cause City/County: Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Goode Creek was initially assessed as not supporting the Recreation Use in the 2002 cycle based on sampling at 2-GOD000.07 and at 2-GOD000.77 (Commerce Road).

In the 2006 cycle, E. coli was added as an impairing cause based on exceedances at 2-GOD000.77. During the 2008 cycle, the impairment converted solely to E. coli.

The violation rate was 8/14 in the 2014 cycle at 2-GOD000.77.

The impairment was addressed in the report James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. Goode Creek is considered Category 4A.

Cause City/County: Richmond

Use(s): Fish Consumption

Causes(s)/VA Category: Polychlorinated biphenyls (PCBs)/5A

Cause Description: During the 2012 cycle, Goode Creek was impaired of the Fish Consumption Use due to two exceedances of the Human Health - Other Surface Waters WQS for water column PCBs. The samples were collected at 2-GOD000.77 as part of a 2009 source identification study for the VDH PCB advisory in the James River.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-02-BAC** **Almond Creek**

Cause Location: Almond Creek from its headwaters to its tidal limit.

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Almond Creek was initially assessed as not supporting of the Recreation Use support goal in the 1998 cycle based on fecal coliform standard exceedances recorded at the Route 5 bridge (2-ALM000.42). During the 2006 cycle, E. coli was added as an impairment. During the 2008 cycle, the impairment converted to E. coli.

The E. coli violation rate was 3/12 during the 2014 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Almond Creek was addressed in the James River and Tributaries - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/010; therefore, it is considered Category 4A.

James River Basin

Cause Group Code: **G01R-02-PH** XVO and XVP - Almond Creek, UT

Cause Location: Unnamed tributaries of Almond Creek.

Cause City/County: Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: In 2004, Almond Creek and tributaries XVO and XVP were considered impaired of the Aquatic Life Use due to pH exceedances at 2-ALM000.42 as well as pH exceedances at station located on UTs downstream of the BFI landfill (2-XVO000.10 and 2-XVP000.04).

Although there are numerous exceedances on the tributary, the pH violation rates were acceptable during the 2010 cycle on mainstem Almond Creek; therefore, Almond Creek was partially delisted.

During the 2012 cycle, the exceedance rates were as follows:

2-XVO000.10 - 8/27 (2008 cycle)

2-XVO000.16 - 0/2

2-XVP000.04 - 3/5

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-04-BAC** **Falling Creek**

Cause Location: Falling Creek from its headwaters downstream to the extent of backwater at Falling Creek Reservoir.

Cause City/County: Chesterfield County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Falling Creek from its headwaters downstream to Falling Creek Reservoir was initially assessed as not supporting the Recreation Use during the 2006 cycle based on the bacteria exceedances at the Route 651 bridge (2-FAC009.46) and at the Route 720 bridge (2-FAC017.80).

During the 2008 cycle, the impairment converted solely to E. coli. The segment shows a history of exceedances at 2-FAC009.46, 2-FAC012.96 (Rt. 360 bridge), and 2-FAC017.80.

The E. coli impairment on Falling Creek from the Falling Creek Reservoir Dam to the tidal limit was addressed in the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. As this segment is within the watershed, it was considered nested (Category 4A) and will be addressed during implementation.

New bacteria criteria were implemented during the 2022 cycle. The segment remained impaired at 2-FAC009.46 due to two or more STV exceedances within a 90-day period with <10 samples. Level II monitoring at 2-FAC-72-CWT showed no violations (0/12 - IN); therefore, DEQ follow up monitoring is recommended.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause Group Code: **G01R-04-DO** **Falling Creek**

Cause Location: Falling Creek from Gregorys Pond downstream to the confluence with Horners Run.

Cause City/County: Chesterfield County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: During the 2008 cycle, this segment of Falling Creek was assessed as not supporting of the Aquatic Life Use due to a dissolved oxygen exceedance rate of 3/22 at DEQ station 2-FAC012.96, which is located at the Route 360 bridge.

The dissolved oxygen impairment was confirmed in the 2016 cycle with exceedance rates of 5/6 at 2-FAC012.96 and 2/2 at 2-FAC013.25.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-05-BAC** **Kingsland Creek**

Cause Location: Kingsland Creek from its headwaters downstream to its mouth at the James River.

Cause City/County: Chesterfield County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2006 cycle, Kingsland Creek was assessed as not supporting of the Recreation Use based on E. coli exceedances at the Route 1 bridge (2-KSL002.62). During the 2008 cycle, the violation rate was 4/11.

Kingsland Creek is within the study area for the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. As this segment is within the watershed, it is considered nested (Category 4A) and will be addressed during implementation.

Additional monitoring was conducted during the 2016 cycle; the exceedance rate was 7/12 at 2-KSL004.42 (Hopkins Road).

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring has been conducted; therefore, the impairment is carried over.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-05-PH** **Kingsland Creek**

Cause Location: Kingsland Creek from its headwaters downstream to its mouth at the James River.

Cause City/County: Chesterfield County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: During the 2006 cycle, Kingsland Creek was assessed as not supporting the Aquatic Life Use based on pH exceedances at the Route 1 bridge (2CKSL002.62). The exceedance rate was 3/11 in the 2008 cycle. No additional data has been collected at that station.

A Natural Conditions Assessment was completed in February 2014. The report attributes the impairment to natural conditions and recommends that Kingsland Creek be reclassified as Class VII swampwaters. Due to an error, it remained 5C for the 2014 cycle.

Additional monitoring was conducted during the 2016 cycle. The exceedance rate was 2/13 at 2-KSL004.42 (Hopkins Road); however, the exceedance rate was acceptable at other stations.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G01R-06-BAC** Gillies Creek

Cause Location: Gillies Creek from its headwaters to its mouth at the James River.

Cause City/County: Henrico County; Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Gillies Creek was initially assessed as not supporting of the Recreation Use in 2004 based on monitoring at the Government Road Bridge (2-GIL001.00).

During the 2008 cycle, the impairment converted to E. coli.

During the 2020 cycle, the stations had the following violation rates: 2-GIL-GIL03-ACB - 3/5 (tidal) 2-GIL-STN01-ACB - 0/7 2-GIL-GIL02-ACB - 1/6 2-GIL000.42 - 11/26 (2018 cycle) 2-GIL001.00 - 6/12 (2010 cycle) 2-GIL001.77 - 19/27 (2012 cycle) 2-GIL002.84 - 2/12 (2010 cycle)

A Richmond CSO outfall is located on the creek. Gillies Creek was included in the James River and Tributaries - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/2010. The stream is considered Category 4A.

The TMDL addressed Gillies Creek down to its mouth, however it was later determined that the mouth of Gillies Creek can be slightly tidal influenced. Due to monitoring at 2-GIL-GIL03-ACB in the 2020 cycle, the tidal portion was added to the impairment.

New bacteria were implemented in the 2022 cycle. No additional data has been collected in the riverine portion; therefore, the impairment was carried over. The 2020 data remains impaired at tidal station 2-GIL-GIL003-ACB under the new criteria due to two or more STV exceedances within the same 90-day period with <10 samples.

James River Basin

Cause Group Code: **G01R-08-BAC XSZ - James River, UT (aka No Name Creek)**

Cause Location: UT to James River (a.k.a. No Name Creek) mainstem and tributaries

Cause City/County: Chesterfield County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: No Name Creek was assessed as not supporting the Recreation Use during the 2004 cycle based on the following fecal coliform exceedance rates:

2/2 at 2-XTC000.08 1/1 at 2-XUH000.01 2/2 at 2-XUI000.01

Additional monitoring was recommended. During the 2008 cycle, E. coli monitoring was conducted at station 2-XSZ001.58, which is located at the Route 1 bridge. The station had an E.coli exceedance rate of 7/13; therefore, the impairment was converted to E.coli.

The exceedance rate was 5/11 during the 2014 cycle.

The stream was addressed in the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. The impairment is considered Category 4A.

New bacteria criteria were implemented in the 2022 cycle. No additional data has been collected; therefore, the impairment is carried over.

James River Basin

Cause Group Code: **G01R-10-BAC** **Pocoshock Creek**

Cause Location: Pocoshock Creek from its headwaters to its mouth at Falling Creek Reservoir

Cause City/County: Chesterfield County; Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2006 cycle, Pocoshock Creek was considered impaired because of a fecal coliform violation rate of 2/12 at station 2-PSK000.23, which is located at a private road off Bemiss. Additional monitoring was conducted in the 2008 cycle and the impairment converted to E. coli. The violation rates were:

2-PSK000.23 - 3/12 2-PSK003.07 - 3/11 2-PSK006.53 - 3/12

Additional monitoring was conducted at 2-PSK-POC01-ACB, a level III citizen monitoring station, in the 2020 cycle. The exceedance rate was 5/8.

The E. coli impairment on Falling Creek from the Falling Creek Reservoir Dam to the tidal limit was addressed in the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. As Pocoshock Creek is within the watershed, it is considered nested (Category 4A) and will be addressed during implementation.

New bacteria criteria were implemented in the 2022 cycle. No new bacteria data were collected, however re-evaluation of the 2020 data indicates that the segment would remain impaired due to two or more STV exceedances within the same 90-day period with <10 samples.

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2006 cycle, Broad Rock Creek was assessed as not supporting the Recreation Use based on E. coli exceedances at 2-BDO000.38 (Columbia Street). During the 2008 cycle, the segment remained impaired due to an E. coli violation rate of 2/11 at 2-BDO000.38 and a violation rate of 3/11 at TMDL station 2-BDO000.46, which is located at Route 1. No additional data has been collected.

Broad Rock Creek is a tributary of Goode Creek, which was included in the James River and Tributaries - City of Richmond Bacterial TMDL. The TMDL was approved by the EPA on 11/4/2010. The impairment will be addressed during the implementation phase of the TMDL and is therefore considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-12-PH** **XYI - Coles Run, UT**

Cause Location: The unnamed tributary XYI from its headwaters to its mouth

Cause City/County: Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: The tributary has been assessed as impaired of the Aquatic Life Use based on a pH exceedance rate of 4/4 at USGS station 0203854210, which is located in the breastworks on the National Battlefield.

Additional data was collected during the 2016 cycle at station 2CXBX001.08. The exceedance rates was 4/4; therefore, the tributary will continue to be listed.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-13-BAC** XYA - Almond Creek, UT

Cause Location: UT XYA from its headwaters to its mouth at Almond Creek.

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, the segment was assessed as impaired of the Recreation Use due to an E. coli violation rate of 3/11 at TMDL station 2-XYA000.06, which is located at Bickerstaff Road. No additional data has been collected.

The stream is a tributary of Almond Creek, which was included in the James River and Tributaries - City of Richmond Bacterial TMDL. The TMDL was approved by the EPA on 11/4/2010. Although the tributary was not specifically addressed, it will be included in the implementation phase of the TMDL and is therefore considered a nested water (Category 4A).

James River Basin

Cause Group Code: **G01R-14-BAC** **Cornelius Creek**

Cause Location: The nontidal portion of Cornelius Creek.

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, Cornelius Creek was assessed as impaired of the Recreation Use due to an E. coli violation rate of 2/10 at TMDL station 2-CEL002.38, which is located at Old Osborne Turnpike.

No additional data has been collected at the original listing station. However, monitoring at 2-CEL001.56 in the 2014 cycle confirmed the impairment (4/12).

Cornelius Creek is within the study area for the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. Although not addressed in the report, the impairment will be addressed during the implementation phase and so is considered a nested water (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G01R-15-BAC** **Proctors Creek**

Cause Location: The nontidal mainstem of Proctors Creek.

Cause City/County: Chesterfield County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Proctors Creek was initially assessed as impaired of the Recreation Use in the 2008 cycle due to E. coli exceedances at the Route 1 bridge (2-PCT002.46). The violation rate was 4/24 during the 2014 cycle; however, continued monitoring is recommended because there were no recent exceedances.

The stream is within the study area for the James River and Tributaries - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. The impairment will be addressed in the implementation phase; therefore, it is considered a nested water (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. The stream remains impaired due to two or more STV exceedances within the same 90-day period with <10 samples.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: G02E-02-CHLA James River

Cause Location: The mainstem of the James River within the Lower Tidal Freshwater Estuary.

Cause City/County: Charles City County; Chesterfield County; Hopewell; Prince George County; Surry County

Use(s): Aquatic Life; Open-Water Aquatic Life

Causes(s)/VA Category: Chlorophyll-a/4A

Cause Description: The James River from the Appomattox River to the Chickahominy River was originally listed on the 1998 list as fully supporting but threatened of the Aquatic Life Use goal based on chlorophyll a exceedances. During the 1998 cycle, EPA extended the segment upstream to the fall line and downgraded the river to not supporting the Aquatic Life Use, citing nutrient concerns.

A special site-specific chlorophyll standard for the mainstem James River was adopted during the 2008 cycle. The lower tidal freshwater segment exceeds the summer seasonal mean in the 2022 cycle.

The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010; therefore, it is considered Category 4A.

James River Basin

Cause Group Code: **G02E-04-PCB James River**

Cause Location: Mainstem James River from the previous limit of PWS near Dutch Gap downstream to the JMSTFu/JMSTFl boundary at the Appomattox River.

Cause City/County: Charles City County; Chesterfield County; Henrico County

Use(s): Fish Consumption; Public Water Supply

Causes(s)/VA Category: Polychlorinated biphenyls (PCBs)/5A

Cause Description: During the 2012 cycle, the segment was impaired of the Fish Consumption Use due to two exceedances of the Human Health Water Quality Criteria for PCBs in water samples collected at 2-JMS087.01. The station was sampled in 2009 and is located at buoy 137.

Additional sampling in 2013 was insufficient for assessment.

Note: the segment extent for the Public Water Supply Use was shortened in the 2018 cycle due to a change in the Virginia Water Quality Standards. It previously extended to 5 miles above the old American Tobacco water intake but now stops 5 miles above City Point in Hopewell. The PCB impairment for the Public Water Supply Use in the upper extent of this segment was partially delisted; however, the segment remains impaired for the Fish Consumption Use.

James River Basin

Cause Group Code: **G02R-01-BAC** **Fourmile Creek**

Cause Location: Fourmile Creek watershed from its headwaters to the mouth at the James River.

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Fourmile Creek from Deerlick Branch to Griggs Pond was initially considered threatened in 1998 and downgraded to impaired in 2002 due to fecal coliform exceedances. However, the creek was mistakenly included on Attachment A Part 1 " Waters listed on Part 1 of Virginia's October 14, 1998 303(d) Report". The impairment has since expanded.

The watershed was assessed as not supporting of the Recreation Use support goal in the 2008 cycle based on an E. coli standard exceedance rate of 5/22 at the Route 5 bridge (2-FOM003.60). The bacteria impairment converted to E. coli. The bacteria TMDL for the Fourmile Creek watershed was completed and approved by the EPA on 9/20/2004. The segment is assessed as Cat. 4A.

The exceedance rate was 8/12 during the 2016 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring has been conducted so the impairment is being carried over.

James River Basin

Cause Group Code: G02R-07-BAC Western Run

Cause Location: Western Run from its headwaters to its mouth at the confluence with Turkey Island Creek

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Western Run was initially assessed as not supporting the Recreation use goals in the 2006 cycle based on bacteria sampling at the Route 156 bridge:

Fecal coliform exceedance rate of 2/3 at USGS station 0203874275

E. coli exceedance rate of 2/4 at DEQ station 2-WSN000.85

During the 2008 cycle, the bacteria impairment converted solely to E. coli based on an E. coli exceedance rate of 6/16 at 2-WSN000.85.

The bacterial TMDL for Western Run was approved by the SWCB on 10/1/2015 and by the EPA on 12/22/2015. The impairment will be considered Category 4A.

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring has been conducted so the impairment is being carried over.

James River Basin

Cause Group Code: **G03E-01-BAC** Bailey Creek (tidal), Cattail Creek (tidal)

Cause Location: Segment begins at Bailey Creek fall line and extends downstream to its mouth at the confluence with the James River. The segment includes the tidal portion of Cattail Creek.

Cause City/County: Hopewell; Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Tidal Bailey Creek was initially listed as impaired of the Recreation Use on the 1994 cycle 303(d) list because of excessive exceedances of the fecal coliform standards.

The TMDL was approved by the EPA on 7/10/2008 and by the SWCB on 4/28/2009. The segment is considered Category 4A.

New bacteria criteria were implemented in the 2022 cycle. Tidal Bailey Creek remained impaired due to two or more E. coli exceedances within the same 90-day period with <10 samples at station 2-BLY000.65.

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G03E-04-BAC James River**

Cause Location: The mainstem tidal James River from the confluence of the Appomattox River downstream to Powells Creek.

Cause City/County: Charles City County; Hopewell; Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River from the Appomattox River downstream to Powells Creek was initially listed as fully supporting but threatened of the Recreation Use during the 1998 cycle and was downgraded to impaired in the 2002 cycle. In 2006, the segment was extended downstream to Queens Creek and E. coli was added as an impairing cause. The impairment converted solely to E. coli in 2008.

The TMDL was approved by the EPA on 7/10/2008 and by the SWCB on 4/28/2009. Because the downstream-most station (2-JMS069.08) had an acceptable rate, the segment was shortened to end at Powell Creek and the TMDL was done for this portion only.

During the 2020 cycle, the violation rates were 7/65 at 2-JMS075.04 & 3/60 (S) at 2-JMS074.44.

New bacteria criteria were implemented in the 2022 cycle. The data were insufficient for assessment; therefore, the impairment is carried over.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G03L-01-DO** **Harrison Lake**

Cause Location: Harrison Lake in its entirety.

Cause City/County: Charles City County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: In 2006 the lake is also considered impaired Cat. 5A because the dissolved oxygen violation rate was unacceptable in the epilimnion/nonstratified periods. This was primarily due to DO violations during the September 2004 monitoring when the lake was not stratified.

In 2008 cycle no additional monitoring was collected, the lake nutrient criteria was developed, lake Harrison does not have a true lacustrine zone. The regional biologist recommended that this lake should be removed from the table of lakes to which the nutrient criteria standards apply during the next triennial review.

During the 2010 cycle the segment remained impaired aquatic life with a DO violation rate of 9/36 at station 2-WER000.02.

During the 2012 cycle the segment remained impaired for DO since there has been no new data since the 2010 cycle.

During the 2014 cycle the segment remained impaired for Aquatic life with a DO violation rate of 9/55 at station 2-WER000.02.

During the 2016 cycle the segment remained impaired for DO with a violation rate of 24/67 at station 2-WER000.02.

No new data since 2016 cycle.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G03R-02-BAC** Bailey Creek

Cause Location: Segment begins at the headwaters of Bailey Creek and extends downstream to the tidal limit.

Cause City/County: Hopewell; Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Bailey Creek was initially included on the 303(d) list in 1994 based on water quality monitoring performed at the Route 10 bridge (2-BLY000.65) and historical water quality problems in Bailey Bay. The causes of impairment were excessive DO and fecal coliform standard exceedances recorded at 2-BLY000.65.

A special study was performed in 1997 and 1998 to delineate the area of impact. Riverine Bailey Creek continued to show fecal coliform impairment.

During the 2008 cycle, the bacteria impairment converted to E. coli due to exceedances at 2-BLY003.42 and 2-BLY005.73. The TMDL was adopted by the EPA on 7/10/2008 and by the SWCB on 4/28/2009. The segment is considered Category 4A.

The violation rates during the 2014 cycle were 5/12 (2012 cycle) and 2/12, respectively.

New bacteria criteria were implemented in the 2022 cycle. No additional data has been collected so the impairment is carried over.

James River Basin

Cause Group Code: **G03R-02-BEN** Bailey Creek

Cause Location: Segment begins at the headwaters of Bailey Creek and extends downstream to the tidal limit.

Cause City/County: Hopewell; Prince George County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: During the 2014 cycle, Bailey Creek was impaired of the Aquatic Life Use due to an altered benthic community at 2-BLY005.73, which is located at Route 630.

The station was re-sampled in 2019-2020 and remained impaired.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause Group Code: **G03R-02-PCBFT** **Bailey Creek**

Cause Location: Segment begins at the headwaters of Bailey Creek and extends downstream to the tidal limit.

Cause City/County: Hopewell; Prince George County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: The non-tidal portion of Bailey Creek was assessed in the 2002 cycle as impaired of the Fish Consumption Use because of exceedances of the human health screening levels for PCBs in fish samples at station 2-BLY005.72 in 1997.

In addition, the VDH has issued a Fish Consumption Advisory for PCBs in Bailey Creek upstream to the Route 630 bridge.

Note: the CGC was changed from G03R-02-PCB to G03R-02-PCBFT in the 2022 cycle to differentiate it from the water column impairment.

James River Basin

Cause Group Code: **G03R-04-BAC** **West Run**

Cause Location: West Run from the confluence with East Run downstream to the backwater of Harrison Lake.

Cause City/County: Charles City County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2010 cycle, West Run was assessed as not supporting the Recreation Use based on an E. coli exceedance rate of 2/12 at the Route 625 bridge (2-WER001.93.)

The West Run impairment was addressed in the Turkey Island Creek Bacterial TMDL, which was approved by the SWCB on 10/1/2015 and by the EPA on 12/22/2015; therefore, the impairment is considered Category 4A.

The exceedance rate was 4/12 during the 2020 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G03R-07-BAC** **Walls Run**

Cause Location: Walls Run from its headwaters to its mouth at Powells Creek.

Cause City/County: Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Walls Run was initially assessed as not supporting the Recreation Use in 2006 based on E. coli exceedances at 2-WLR000.42, which is located at the Route 10 bridge. During the 2012 cycle, the segment remained impaired due to the following violation rates:

6/25 at 2-WLR000.42 2/12 at 2-WLR002.19 (Route 635) 6/12 at 2-WLR004.46 (Route 646)

However, Walls Run drains to Powell Creek, which was addressed in the James River - Hopewell to Westover Bacterial TMDL. The TMDL was approved by the EPA on 7/10/2008 and by the SWCB on 4/28/2009. Because Powell Creek requires an 86.1% reduction in bacterial loads, Walls Run is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. Walls Run remains impaired due to two or more STV exceedances in the same 90 day period with < 10 samples.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G03R-08-BAC** **Cattail Creek**

Cause Location: The nontidal portion of Cattail Creek.

Cause City/County: Hopewell

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, nontidal Cattail Creek was assessed as not supporting of the Recreation Use due to an E. coli violation rate of 5/12 at the Route 36 bridge (2-CTC001.42).

The James River - Hopewell to Westover bacterial TMDL was developed and addressed the Bailey Bay/tidal Bailey Creek/tidal Cattail Creek E. coli impairment. The watershed requires a 91.1% percent reduction of E. coli; therefore, the nontidal Cattail Creek impairment is considered nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data has been collected so the impairment has been carried over.

James River Basin

Cause Group Code: **G04E-05-CHLA** **James River**

Cause Location: The mainstem of the James River within segment JMSOHa.

Cause City/County: Charles City County; Isle Of Wight County; James City County; Newport News; Surry County; Williamsburg

Use(s): Aquatic Life; Open-Water Aquatic Life

Causes(s)/VA Category: Chlorophyll-a/4A

Cause Description: During the 2022 cycle, JMSOHa failed the summer seasonal chlorophyll a special standard. The spring criteria was met.

The Chesapeake Bay TMDL was approved by the EPA on 12/31/2010; therefore, the segment is considered Category 4A.

James River Basin

Cause Group Code: **G04L-01-BAC** **Sunken Meadow Pond**

Cause Location: Sunken Meadow Pond in its entirety.

Cause City/County: Surry County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: Sunken Meadow Pond was impaired of the Recreation Use during the 2016 cycle due to an E. coli exceedance rate of 2/12 at 2-SKC001.17, which is located at Rt. 626.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: G04L-01-DO Sunken Meadow Pond

Cause Location: Sunken Meadow Pond in its entirety.

Cause City/County: Surry County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: During the 2010 cycle, Sunken Meadow Pond was assessed as not supporting of the Aquatic Life Use due to dissolved oxygen violations at 2-SKC001.17, which is located at Rt. 626. The exceedance rate was 3/12 during the 2016 cycle.

Although the segment is a non-significant/non 187 lake, the TSI was not used because guidance states that only nutrient data collected in the lacustrine zone of the lake should be used. The station is located near the backwater of the pond. In previous cycles, the TSIs would have been 50 for chlorophyll a, 61 for total phosphorus, and secchi depth information was not collected.

James River Basin

Cause Group Code: **G04R-01-BAC** **Wards Creek**

Cause Location: Wards Creek from the headwaters to its tidal limit.

Cause City/County: Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2006 cycle, Wards Creek was assessed as not supporting of the Recreation Use support goal based on an E. coli exceedances at monitoring station 2-WRD005.40, which is located at the Route 10 bridge.

The impairment was addressed in the Turkey Island Creek and James River Westover Bacterial TMDL, which was approved by the SWCB on 10/1/2015 and by the EPA on 12/22/2015.

However, the exceedance rate was acceptable during the 2016 cycle (3/35) and the stream was delisted (Category 2C.)

It was relisted in the 2018 cycle (Category 4A) due to an exceedance rate of 4/34.

The exceedance rate was 7/34 in the 2020 cycle.

New bacteria criteria were implemented in the 2022 cycle. The station remains impaired due to two or more STV exceedances in the same 90-day period with <10 samples.

James River Basin

Cause Group Code: **G04R-04-BAC** XBB - Upper Chippokes Creek, UT

Cause Location: An unnamed tributary of Upper Chippokes Creek from the headwaters to its tidal limit.

Cause City/County: Surry County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2014 cycle, the tributary was assessed as not supporting of the Recreation Use based on an E. coli exceedance rate of 2/12 at monitoring station 2CXBB000.62, which is located at the Route 10 bridge.

The tributary is located in the Upper Chippokes Creek watershed, which was addressed in the Turkey Island Creek and James River Westover Bacterial TMDL. The TMDL was approved by the SWCB on 10/1/2015 and by the EPA on 12/22/2015. The impairment is considered nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

James River Basin

Cause Group Code: **G04R-05-BAC** **Flowerdew Hundred Creek**

Cause Location: The nontidal portion of Flowerdew Hundred Creek.

Cause City/County: Prince George County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2016 cycle, the nontidal portion of Flowerdew Hundred Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 3/7 at 2-FDH004.54, which is located at Route 614 (Wards Creek Road.)

Flowerdew Hundred Creek is located within the study area for the Turkey Island Creek and James River Westover Bacterial TMDL, which was approved by the SWCB on 10/1/2015 and by the EPA on 12/22/2015. The impairment will be addressed during implementation; therefore, the impairment is considered nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G05R-01-BEN** Chickahominy River, UT - Unnamed Tributary

Cause Location: Segment consists of the unnamed tributary of the Chickahominy River to which the Tyson Plant discharges.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A; pH/4A

Cause Description: Biological monitoring of the receiving stream identified a moderately impaired benthic community downstream of the Tyson Plant (VPDES Permit No. VA0004031) discharge when compared to the benthic community immediately upstream of the discharge. This resulted in this segment being assessed as impaired of the Clean Water Act's Aquatic Life Use Support Goal for the 1994 305(b) report.

The TMDL study for the watershed was completed during the 2006 cycle. Extensive biological and nutrient monitoring was conducted. The benthic impairment continued and a pH impairment was noted at stations 2-XDD000.32 and 2-XDD000.40. The past phosphorus screening value was exceeded at multiple stations. The past chlorophyll A screening value was exceeded at 2-XDD000.40 and 2-XDD000.32 as well.

The TMDL was approved by the EPA on 8/05/2004 and by the SWCB on 3/15/05. The study attributed the benthic impairment to excess phosphorus and high pH. The allocation was 432.69 lbs./year of phosphorus, divided between Tysons Foods (409.35 lbs./yr) and nonpoint sources (23.34 lbs./year).

The segment remained impaired for benthics as well as pH during the 2016 cycle due to exceedances at 2-XDD000.40 and at 2-XDD000.32. Additional pH sampling in the 2018 cycle at 2-XDD000.40 continued the pH impairment (26/57).

James River Basin

Cause Group Code: **G05R-01-NH3** XDD - Chickahominy River, UT

Cause Location: Tyson Plant discharge to mouth

Cause City/County: Hanover County

Use(s): Aquatic Life; Wildlife

Causes(s)/VA Category: Ammonia, Un-ionized/5A

Cause Description: Multiple exceedances of the chronic ammonia criteria had been noted in grab samples throughout the stream; therefore, a special study was conducted in July 2005 to investigate the ammonia levels in the stream. Based on the results of the study, the segment was impaired for ammonia because of 6 acute ammonia exceedances each at 2-XDD000.84 and at 2-XDD000.91. A fish kill was noted in the pond.

Although there were no acute ammonia exceedances in the 2014 cycle, there were multiple chronic exceedances at 2-XDD000.32, 2-XDD000.40, 2-XDD000.84, and 2-XDD000.91. The impairment will be carried over, but continued monitoring was recommended.

Additional monitoring was conducted in 2006 at 2-XDD000.84 (no exceedances) and 2-XDD000.40 (one chronic exceedance.)

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: G05R-02-BAC Upham Brook Watershed

Cause Location: Segment begins at the headwaters of Upham Brook and extends downstream to the confluence with the Chickahominy River, including all tributaries.

Cause City/County: Henrico County; Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Upham Brook has been impaired of the Recreation Use since the 1996 cycle based on violations at DEQ's Ambient Monitoring Station 2-UPM003.53, located at the Brook Road (Rt. 1) bridge over Upham Brook, as well as excessive fecal coliform violation rates at the Richmond Regional PDC special study stations.

The segment was extended in the year 2002 cycle to include the entire watershed. During the 2006 cycle, the bacteria impairment was converted to E. coli based on widespread exceedances in the watershed.

The Upham Brook and Tributaries bacterial TMDL was completed in the 2010 cycle. The report was approved by the EPA on 7/24/2008 and by the SWCB on 4/28/2009. The watershed is considered Category 4A.

The watershed remained impaired during the 2020 cycle (6/12 at 2-UPM001.35, 3/9 at ACB station 2CUPM-UB1-ALL, 3/3 at 2CXXQ-PRC03-CB, 6/16 at 2CJOP-JOR1-ACB, and 10/15 at 2CXXQ-PRC01-ACB). In addition, the violation rate was 3/4 at 2CPRI-PC-ACB in the 2018 cycle.

New bacteria criteria were implemented in the 2022 cycle. Stations 2-UPM001.35, 2CXXQ-PRC01-ACB, 2CXXQ-PRC03-ACB, 2CJOP-JOR1-ACB, and 2CJOP-JB1-HAWQS were impaired due to two or more STV exceedances in a 90 day period.

James River Basin

Cause Group Code: **G05R-03-BAC** **Chickahominy River**

Cause Location: The Chickahominy River from the confluence with UT XDD to the Route 360 bridge.

Cause City/County: Hanover County; Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, the segment of the Chickahominy from the unnamed tributary at approximately rivermile 76 downstream to the Route 360 bridge was assessed as not supporting of the Recreation Use due to the following E. coli exceedance rates:

2/12 at 2CCHK071.66 3/12 at 2-CHK067.30

The impairment was extended upstream to the confluence with XDD during the 2014 cycle due to an exceedance rate of 7/37 at 2-CHK076.59, which is located at Route 625. The segment is located within the study area for the Chickahominy River and Tributaries Bacterial TMDL report, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013. The upstream bacterial impairment is considered nested.

Subsequent monitoring has indicated impairment at 2-CHK071.75 as well.

New bacteria criteria were implemented in the 2022 cycle. There is insufficient information to assess the Recreation Use; however, the impairment will be carried over.

Cause Group Code: **G05R-04-BEN** Chickahominy River

Cause Location: The Chickahominy River from its headwaters to the confluence with unnamed tributary XDD.

Cause City/County: Hanover County; Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: During the 2010 cycle, the segment was assessed as not supporting of the Aquatic Life Use due to an impaired benthic community at station 2-CHK079.23, which is located at the Route 33 bridge.

Additional sampling in 2010, 2012, and 2013 confirmed the impairment at 2-CHK079.23 as well as at station 2-CHK081.80.

The Benthic TMDL was approved by the EPA on 11/7/2013 and by the EPA on 3/28/2014. The segment is considered Category 4A.

James River Basin

Cause Group Code: **G05R-05-BAC** **Stony Run**

Cause Location: Stony Run from the confluence with Lickinghole Creek downstream to its mouth at the Chickahominy River.

Cause City/County: Hanover County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The segment of Stony Run was initially assessed as impaired of the Recreation Use in 2004 because of fecal coliform exceedances at the Route 656 bridge (2-SNF000.04). E. coli monitoring was conducted during the 2010 cycle; the impairment converted to E. coli. The exceedance rate was 5/23 during the 2012 cycle.

The impairment was addressed in the Chickahominy River and Tributaries TMDL report, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013. The impairment is considered Category 4A.

New bacteria criteria were implemented in the 2022 cycle. DEQ has not re-sampled; however, the impairment will be carried over. Level II sampling at 2-SNF-STORUN0.04-ACB indicates that E. coli exceedances are still probable.

James River Basin

Cause Group Code: **G05R-06-DO** **Grassy Swamp Creek**

Cause Location: Grassy Swamp Creek from the pond at rivermile 0.99 to its mouth.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: Grassy Swamp Creek was assessed as impaired of the Aquatic Life Use in the 2008 cycle due to dissolved oxygen exceedances at 2-GRC000.96, which is located at the Route 660 bridge.

The exceedance rate was 19/61 in the 2014 cycle. No additional data has been collected.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G05R-07-DO** XDD - Chickahominy River, UT

Cause Location: The unnamed tributary XDD from its headwaters to the Tysons Foods discharge.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: The segment was initially assessed as not supporting of the Aquatic Life Use in the 2006 cycle due to dissolved oxygen exceedances at 2-XDD001.23. The impairment is suspected to be caused by low flow conditions potentially exacerbated by the excess phosphorus in the watershed. During the 2014 cycle, the segment had a DO violation rate of 14/38 at 2-XDD001.23.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G05R-07-PH** XDD - Chickahominy River, UT

Cause Location: The unnamed tributary XDD from its headwaters to the Tysons Foods discharge.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: The segment was initially considered impaired during the 2006 cycle due to pH exceedances at 2-XDD001.23. It was categorized as Category 4A because of the benthic/pH TMDL for the lower portion of the tributary. Since the pH at this station is low, not elevated as at the downstream stations, this impairment should not be considered addressed. Because it was initially impaired in 2006, a TMDL due date of 2018 was assigned.

The violation rate was 29/38 during the 2014 cycle.

James River Basin

Cause Group Code: G06R-03-BAC White Oak Swamp

Cause Location: White Oak Swamp from White Oak Swamp Creek downstream to its mouth at the Chickahominy River.

Cause City/County: Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: White Oak Swamp is assessed not supporting of the Recreation use support goal based on E. coli standard exceedances recorded at 2-WOS002.69. The segment had initially been considered impaired for fecal coliform but converted to E. coli during the 2006 cycle. The Bacteria TMDL for White Oak Swamp was completed and approved by the EPA on 9/20/2004.

During the 2010 cycle, the segment remained impaired with an E. coli exceedance rate of 6/18 at 2-WOS002.69; therefore, White Oak is considered a Cat. 4A water for bacteria.

Only one additional sample has been collected by the DEQ, which is insufficient for assessment.

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: Beaverdam Creek was assessed as not supporting of the Aquatic Life Use based on a pH standard exceedance rate of 3/4 at USGS station 02042433.

During the 2008 cycle, monitoring at DEQ station 2-BEV002.00 at the Route 156 bridge, only slightly upstream of the USGS station, had an acceptable exceedance rate of 0/11; therefore continued monitoring was recommended.

During the 2014 cycle, monitoring was conducted at 2-BEV002.00 as well as 2-BEV-RICH01-NPS, which is a National Park Service station. The NPS station had an acceptable violation rate (0/31), however the DEQ station was 3/26; therefore, the segment remained impaired.

During the 2016 cycle, widespread monitoring was conducted by the DEQ and the National Park Service. Although the majority of stations had acceptable pH, the upstream-most station, 2-BEV006.75 continued to have pH exceedances (7/13). The segment was shortened to end at tributary XBT and the downstream portion was partially delisted.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G06R-07-PH** **Boatswain Creek**

Cause Location: Boatswain Creek from its headwaters to its mouth at the Chickahominy River.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: Boatswain Creek was assessed as not supporting of the Aquatic Life Use during the 2008 cycle based on pH standard exceedance rates of 3/4 at USGS station 0204243830, 2/4 at USGS station 0204243790, and 7/15 at DEQ station 2-BTS002.62.

During the 2012 cycle, the exceedance rate at 2-BTS002.62 was 4/11. Monitoring at new National Park Service station 2-BTS-RICH-03-NPS was inconclusive (1/8).

During the 2014 cycle, the pH exceedance rate was acceptable (2/31) at 2-BTS-RICH-03-NPS; however, there was no additional monitoring at any of the other stations. Boatswain Creek remained impaired in the 2014 cycle until further monitoring could be conducted.

In the 2020 cycle, the creek remains impaired due to an exceedance rate of 5/12 at 2-BTS002.62 (2016 cycle) and 5/41 at 2-BTS-RICH-03-NPS.

Cause Group Code: G06R-11-PH Bloody Run

Cause Location: Bloody Run from its headwaters to the its mouth at Gaines Millpond.

Cause City/County: Hanover County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: Bloody Run was assessed as not supporting of the Aquatic Life Use during the 2004 cycle based on pH exceedance rates of 4/4 at USGS stations 0204243610 and 0204243650.

Additional monitoring was conducted during the 2016 cycle. Monitoring at National Park Service station 2-BDY-RICH-04-NPS, which is co-located with the previous USGS station 0204243650, had a pH violation rate of 33/51. DEQ station 2-BDY000.58 had an exceedance rate of 12/12.

During the 2020 cycle, the exceedance rate at 2-BDY-RICH-04-NPS was 28/42.

Cause Group Code: **G06R-12-BAC** Beaverdam Creek

Cause Location: Beaverdam Creek from its headwaters to its mouth.

Cause City/County: Hanover County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Beaverdam Creek was initially assessed as not supporting the Recreation Use in the 2006 cycle based on E. coli exceedances at the Route 156 bridge (2-BEV002.00). During the 2012 cycle, the exceedance rate was 3/14.

The impairment was addressed in the Chickahominy River and Tributaries Bacterial TMDL report, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013.

Monitoring by citizen monitoring groups in the 2018 cycle confirmed the impairments (3/13 at 2-BEV-BDC1-HCSWCD, and 4/13 at 2-BEV-BDC2-HCSWCD).

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring has been conducted; therefore, the impairment will be carried over.

James River Basin

Cause Group Code: **G06R-14-BAC** Chickahominy River

Cause Location: Segment begins at the Route 360 bridge over the Chickahominy River, and extends downstream to the Route 156 bridge.

Cause City/County: Hanover County; Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, the segment was considered not supporting of the Recreation Use due to E. coli exceedances at 2-CHK062.57, which is located at the Route 360 bridge.

The impairment was addressed in the Chickahominy River and Tributaries Bacterial TMDL, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013.

The exceedance rates were 9/36 at 2-CHK062.57 and 5/12 at 2-CHK055.04 during the 2020 cycle.

New bacteria criteria were implemented in the 2022 cycle. The segment remained impaired due to two or more exceedances within a 90 day period at DEQ stations 2-CHK055.04 and 2-CHK062.57 and citizen monitoring station 2-CHK-C05-JRA as well as geometric mean exceedances at 2-CHK-C05-JRA.

James River Basin

Cause Group Code: **G07R-01-BAC** **Collins Run**

Cause Location: Collins Run from the headwaters downstream to rivermile 0.99

Cause City/County: Charles City County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Collins Run from its headwaters downstream to rivermile 0.99 was assessed as not supporting of the Recreation Use in 2002 because of fecal coliform exceedances at two confined animal feeding operation special study locations, 2-CNR001.16 and 2-CNR001.54 (Route 614 bridge).

The impairment converted to E. coli in the 2010 cycle.

During the 2012 cycle, the exceedance rates were as follows: 1/12 at 2-CNR001.54 (fully supporting) 2/12 at 2-CNR001.58 4/12 at 2-CNR002.69

Collins Run was addressed in the Chickahominy River and Tributaries Bacterial TMDL report, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013; therefore, it is considered Category 4A.

Monitoring in the 2020 cycle at 2-CNR001.54 showed impairment (7/12). New bacteria criteria were implemented in the 2022 cycle. A review of the previous cycle's data at 2-CNR001.54 indicates that the monitoring would have been insufficient for assessment; however, the impairment is carried over.

James River Basin

Cause Group Code: **G07R-02-DO** Rumley Marsh

Cause Location: Rumley Marsh from XWS to Old Forge Pond. Below Old Forge Pond, the stream name is Jones Run.

Cause City/County: New Kent County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: Special studies conducted in Rumley Marsh and Jones Run in 1994 identified summertime DO exceedances in Rumley Marsh at station 2-RUM002.46.

Rumley Marsh downstream to Old Forge Pond was threatened in 1998 and downgraded in 2002. During the 2008 cycle, additional monitoring was conducted at 2-RUM004.38, which is located at the Route 617 bridge. The monitoring confirmed the impairment. In addition, station 2-RUM002.46 had a violation rate of 5/6 and station 2-RUM005.54 was 1/6 (IN).

During the 2014 cycle, the dissolved oxygen exceedance rates were as follows:

18/30 at 2-RUM002.46

11/27 at 2-RUM004.38 (2012)

3/12 at 2-RUM005.54

The Natural Conditions Assessment for Low pH and Low Dissolved Oxygen in Rumley Marsh, Pelham Swamp, and Tributaries was completed in January 2012. The report recommended that Rumley Marsh from its headwaters to its confluence with tributary XWS be reclassified as Class VII swampwater; until the WQS could be revised the upper portion was assessed as Category 4C. However, it indicates that the nutrients in lower Rumley Marsh are too high. It is believed that the Chesapeake Bay TMDL will reduce nutrients in nonpoint source runoff.

The upper watershed was reclassified as Class VII swampwaters during the 2018 cycle. Per Virginia's Water Quality Standards (9VAC25-260-50), numeric dissolved oxygen standards only apply to Class VII waters when there is sufficient evidence the narrative criterion is not protective of aquatic life uses. To date, this Class VII water has not exhibited a need for a site-specific DO criterion, so the dissolved oxygen impairment was removed (partial delist) in the upper portion.

James River Basin

Cause Group Code: G07R-02-PH Rumley Marsh

Cause Location: Rumley Marsh from XWS to Old Forge Pond. Below Old Forge Pond, the stream name is Jones Run.

Cause City/County: New Kent County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: During the 2010 cycle, the segment was assessed as not supporting of the Aquatic Life Use due to pH violations at 2-RUM002.46 and 2-RUM005.54. During the 2014 cycle, the pH exceedance rates were as follows:

6/30 at 2-RUM002.46

4/28 at 2-RUM004.38 (2012)

9/12 at 2-RUM005.54

The Natural Conditions Assessment for Low pH and Low Dissolved Oxygen in Rumley Marsh, Pelham Swamp, and Tributaries was completed in January 2012. The report recommends that Rumley Marsh from its headwaters to its confluence with tributary XWS be reclassified as Class VII swampwater; until the WQS could be revised the upper portion was assessed as Category 4C. However, it indicates that the nutrients in lower Rumley Marsh are too high for the current swampwater protocol. It is believed that the Chesapeake Bay TMDL will reduce nutrients in nonpoint source runoff.

The upper Rumley Marsh watershed was reclassified as Class VII swampwaters during the 2018 cycle. Although no additional pH data has been collected, a review of the previous pH data indicates that the upper watershed meets the newly designated Class VII watershed pH criteria of 3.7-8.0 SU. The Class VII portion of the pH impairment was partially delisted.

James River Basin

Cause Group Code: **G07R-08-BAC** Chickahominy River

Cause Location: The Chickahominy River from the confluence with Possum Run downstream to the limit of backwater for Lake Chickahominy.

Cause City/County: Charles City County; New Kent County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2016 cycle, the Chickahominy River from Possum Run to Chickahominy Lake was impaired of the Recreation Use due to E.coli exceedances at 2-CHK035.26, which is located at Route 618.

The segment is within the study area for the Chickahominy River and Tributaries Bacterial TMDL, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013. The impairment is considered nested (Category 4A.)

The exceedance rate was 12/7 in the 2020 cycle.

New bacteria criteria were implemented in the 2022 cycle. The segment remained impaired due to two or more hits in the same 90-day period with <10 samples.

James River Basin

Cause Group Code: **G07R-09-BAC** XTH - Chickahominy River, UT

Cause Location: The unnamed tributary XTH in its entirety.

Cause City/County: New Kent County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2018 cycle, XTH (UT to the Chickahominy River) was impaired of the Recreation Use due to an E. coli exceedance rate of 7/11 at 2CXTH000.86.

The stream is located within the study area for the Chickahominy River and Tributaries Bacterial TMDL, which was approved by the EPA on 9/19/2012 and by the SWCB on 3/25/2013. The impairment is considered nested (Category 4A.)

New bacteria criteria were implemented in the 2022 cycle. A review of the data indicates that the station would remain impaired under the new criteria due to two or more STV exceedances in a 90-day period with <10 samples.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G08E-01-BAC** Morris Creek

Cause Location: Morris Creek from its tidal limit at river mile 6.67 to its mouth.

Cause City/County: Charles City County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: Nontidal Morris Creek was previously assessed as not supporting of the Recreation use support goal based on fecal coliform exceedances recorded at 2-MOC005.97. The segment was listed as threatened in 1998, and then downgraded to impaired during the 2002 cycle. However, EPA mistakenly included it as impaired on the 1998 Consent Decree.

During the 2008 cycle, additional E. coli monitoring was conducted at stations 2-MOC005.97 and 2-MOC010.97. Although the upstream E. coli exceedance rate was acceptable (1/12), the segment remained impaired due to an exceedance rate of 4/17 at 2-MOC005.97. The impairment converted to E. coli.

However, in the 2010 cycle, it was determined that the tidal limit had been incorrectly determined and that the listing station 2-MOC005.97 was tidally influenced. That station was reassessed against the enterococci standard and remained impaired. The segment extent was corrected.

The TMDL was completed for the tidal enterococci impairment and was approved by the EPA on 12/3/2009.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G08E-01-PH** Morris Creek

Cause Location: Morris Creek from its tidal limit at river mile 6.67 to its mouth.

Cause City/County: Charles City County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/4C

Cause Description: Morris Creek was assessed as not supporting of the Aquatic Life use support (ALUS) goal based on water quality monitoring performed at the Route 623 bridge (2-MOC005.97).

During the 2008 cycle, additional monitoring was conducted. The impairment was confirmed with the following violation rates:

3/24 at 2-MOC005.97

pH 3/10 at 2-MOC010.97

However, based on analysis of station 2-MOC005.97 a Natural Conditions Assessment recommends that Morris Creek and its tributaries from the head of tide at river mile 5.97 upstream to its headwaters be reclassified as Class VII swampwaters.

The nontidal watershed above rivermile 5.97 was reclassified during the 2010 cycle and the segment was reassessed against the Class VII pH standard. However, it was determined that the tidal limit is actually located at rivermile 6.67; therefore, the original listing station, 2-MOC005.97, is located in the tidal Morris Creek segment. The violation rate was 7/33 in the 2010 cycle. Since the Natural Condition Report confirmed that the impairment at the station was a natural condition, the tidal portion of Morris Creek is considered Category 4C.

Monitoring at station 2CMOC001.95 was acceptable; therefore, further monitoring is recommended.

Cause Group Code: **G08E-03-BAC** **Diascund Creek**

Cause Location: The tidal Diascund Creek.

Cause City/County: James City County; New Kent County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: Diascund Creek from the dam to its mouth was assessed as not supporting of the Recreation Use during the 2010 cycle due to an enterococci exceedance rate of 4/23 at 2-DSC003.19.

Additional monitoring in the 2016 cycle confirmed the impairment (2/11 at 2-DSC003.19 and 5/12 at 2-DSC005.38.)

The impairment was addressed in the Lower Chickahominy River Bacterial TMDL, which was approved by the EPA on 8/11/2017 and the SWCB on 7/19/2017. It is therefore considered a Category 4A water.

James River Basin

Cause Group Code: **G08R-02-BAC** Mill Creek

Cause Location: Mill Creek from its headwaters downstream to its tidal limit

Cause City/County: James City County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Mill Creek was initially assessed as not supporting of the Recreation Use support goal in 2004 based on a fecal coliform violation rate of 3/13 recorded at 2-MCR002.38.

Additional monitoring was conducted during the 2012 cycle. The impairment converted to E. coli due to an exceedance rate of 2/12.

The impairment was addressed in the Lower Chickahominy River Bacterial TMDL, which was approved by the EPA on 8/11/2017 and the SWCB on 7/19/2017. It is therefore considered a Category 4A water.

The exceedance rate was 4/12 during the 2016 cycle.

New bacteria criteria were implemented in the 2022 cycle. The station was re-sampled once in 2019; however, that data is insufficient for assessment.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G09R-01-DO** Beaverdam Creek

Cause Location: Beaverdam Creek, a tributary to Diascund Reservoir.

Cause City/County: New Kent County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: Beaverdam Creek has been assessed as not supporting of the Aquatic Life use because of dissolved oxygen standard exceedances at the Route 632 bridge (2-BDM004.12). The segment was initially considered fully supporting but threatened in the 1998 cycle, but was downgraded to impaired in the 2002 cycle with a TMDL due date of 2014.

A Natural Conditions Assessment was completed for the Beaverdam Creek watershed on January 2012. The report indicates that the stream is not appropriate for Class VII designation because of excess nutrients. It is believed that the Chesapeake Bay TMDL will reduce nutrients in the watershed.

Additional monitoring has been conducted throughout the creek. The exceedance rates in the 2016 cycle were as follows: 2/11 at 2-BDM003.16 13/37 at 2-BDM004.12 (2014 cycle) 14/23 at 2-BDM004.60 0/23 at 2-BDM005.70 (fully supporting)

Although the upstream station was fully supporting and is upstream of a swampy area, dark water was seen at this station, so it will remain incorporated with the downstream stations.

In the 2020 cycle, the exceedance rate was 7/12 at 2-BDM004.60.

Additional monitoring was conducted in the 2022 cycle. Dissolved oxygen exceedances rates were 4/10 at 2-BDM004.12 and 0/1 at 2-BDM004.65.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G09R-01-PH** Beaverdam Creek

Cause Location: Beaverdam Creek, a tributary to Diascund Reservoir.

Cause City/County: New Kent County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: During the 2012 cycle, Beaverdam Creek was assessed as not supporting of the Aquatic Life use because of pH exceedances.

The exceedance rates in the 2016 cycle were as follows: 2/11 at 2-BDM003.16 2/37 at 2-BDM004.12 (2014 cycle - fully supporting) 5/23 at 2-BDM004.60 2/23 at 2-BDM005.70 (fully supporting)

Although the upstream station was fully supporting and is upstream of a swampy area, dark water was seen at this station, so it will remain incorporated with the downstream stations.

In the 2020 cycle, the exceedance rate was 2/12 at 2-BDM004.60.

Additional monitoring was conducted during the 2022 cycle. pH exceedance rates were 0/10 at 2-BDM004.12 and 0/1 at 2-BDM004.65. Although this is acceptable, the stream will remain impaired due to the previous exceedance rates at other stations within the segment. Continued monitoring is recommended.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **G09R-02-DO** **Diascund Creek**

Cause Location: Diascund Creek from its headwaters to the Diascund Reservoir.

Cause City/County: New Kent County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: During the 2008 cycle, Diascund Creek was assessed as not supporting of the Aquatic Life Use due to a dissolved oxygen violation rate of 4/25 at the Route 628 bridge (2-DSC012.68).

During the 2014 cycle, the exceedance rates were as follows:

5/11 at 2-DSC011.33

1/24 at 2-DSC012.67 (fully supporting)

5/11 at 2-DSC014.53

4/11 at 2-DSC015.32

Additional monitoring was conducted at 2-DSC012.67 during the 2016 cycle. The exceedance rate was acceptable (1/35). The segment will remain impaired due to the previous exceedances at the remaining stations in the stream; however, continued monitoring is recommended.

Cause Group Code: **G09R-06-BAC** XAH - Beaverdam Creek, UT

Cause Location: Unnamed tributary from its headwaters to its mouth at Beaverdam Creek

Cause City/County: New Kent County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, XAH was assessed as not supporting of the Recreation Use due to an E. coli exceedance rate of 2/6 at 2CXAH000.35.

The impairment was addressed in the Lower Chickahominy River Bacterial TMDL, which was approved by the EPA on 8/11/2017 and the SWCB on 7/19/2017. It is therefore considered a Category 4A water.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G10R-04-BAC** **Unnamed tributary to Mill Creek**

Cause Location: This cause encompasses the Unnamed tributary to Mill Creek. Located N of Lake Powell, between Jamestown Isl. and City of Williamsburg.

Cause City/County: James City County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Recreation Use is impaired based on E.coli data from Station 2-XZK000.06 that has 2 or more STV hits in the same 90-day period with < 10 samples. The impairment was nested within the Mill Creek tidal recreation impairment in the 2018 IR. EPA approved 4/28/2009.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAT-G10R_XZK01A10 / Unnamed tributary to Mill Creek / Unnamed tributary to Mill Creek. Located N of Lake Powell, between Jamestown Isl. and City of Williamsburg. Northeast branch, at confluence of Lake Powell and Mill Creek.	4A	Escherichia coli (E. coli)	2012	L	1.22

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G10R-05-BAC** **Dark Swamp**

Cause Location: The nontidal portion of Dark Swamp

Cause City/County: Surry County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: During the 2014 cycle, Dark Swamp was assessed as not supporting of the Recreation Use due to an E. coli exceedance rate of 4/12 at 2-DRK000.31, which is located at the Route 626 bridge.

New bacteria criteria were implemented in the 2022 cycle. Only one additional data point has been collected and is insufficient for assessment. Therefore, the impairment is carried over.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: G11E-01-BAC Warwick River - Middle Tidal Portion

Cause Location: This cause encompasses the Warwick River - Middle Tidal Portion, from approximately Denbigh Landing area downstream to Denbigh Park area. Located in Menchville area of Newport News. CBP segment JMSMH.

Cause City/County: Newport News

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The Recreation Use is impaired based on Enterococcus having 2 or more STV hits in the same 90-day period with less than 10 samples. Previous impairment based on data exceeding the single sample max criteria (9 viol/ 32 obs) measured at DEQ (AQM) monitoring station @ 2-WWK003.98. Considered NESTED under TMDL (35574) "Warwick River" EPA approved 2/29/2008.

James River Basin

Cause Group Code: **G11E-05-BAC** **Pagan River - Upper and Middle**

Cause Location: This cause encompasses the Upper and Middle Pagan River - from upper tidal influence downstream past Route 10. South shore tributary to James River. Located in Smithfield area. CBP segment JMSMH.

Cause City/County: Isle Of Wight County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The Recreation Use is impaired based on failure to meet the Enterococcus bacteria criteria at stations 2-PGN008.4(impaired with 2 or more STV hits in same 90-day period) and 2-PGN006.65 (retain impairment since station has insufficient data to analyze geomean and 1 STV hit in multiple 90-dayperiods) and 2-PGN005.46 (multiple geomean exceedances in any 90-day period).

James River Basin

Cause Group Code: G11E-20-SF Jones Creek - Tributary to Pagan River

Cause Location: Described in VDH Notice and Description of Shellfish Direct Harvesting Condemnation #061-064 B & M1 5/30/2018.

Cause City/County: Isle Of Wight County; Suffolk

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: The Shellfishing Use is not supported by the VDH DSS Shellfish Condemnation # 061-064 B and M1 effective date 20180530. Bacteria impairment covered under TMDL (35579) 'Pagan River & Jones Creek', EPA approved 2/12/2008.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAT-G11E_JOG02A08 / Jones Creek - Tributary to Pagan River / South shore trib. to Pagan R. near confluence with James R. From SR 669 to mouth, including tidal tributaries. CBP segment JMSMH. James River Basin

Cause Group Code: G11E-21-BAC James River - Huntington Beach Area

Cause Location: This cause encompasses the area north shore James R. near foot of James R. Bridge. Mainstem along north shoreline beach in Hilton Village area. CBP segment JMSMH.

Cause City/County: Newport News

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/5A

Cause Description: The Recreation Use is impaired based on Enterococcus bacteria data from the VDH-Beach station VA747813 with 2 or more STV exceedances in the same 90-day period and multiple short term swimming advisories.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **G12L-03-CHLA** **Speights Run Lake**

Cause Location: This cause encompasses the entirety of Speights Run Lake. Northwest of Suffolk Municipal Airport. Southwest of Lake Kilby. Most southwest branch and upstream of Lake Kilby/Lake Meade system (headwater impoundments of Nansemond River). Portion of Portsmouth PWS system.

Cause City/County: Suffolk

Use(s): Aquatic Life

Causes(s)/VA Category: Chlorophyll-a/5A

Cause Description: The Aquatic Life Use is impaired for nutrients, Chla. Speights Run pooled nutrients results are 2 viol / 2 obs for Chla in 2012 and 2015 (IM). There is no algaecide application during assessment years therefore only Chla is assessed.

James River Basin

Cause Group Code: **G12L-04-DO** **Lake Kilby**

Cause Location: This cause encompasses the entirety of Lake Kilby. Northwest of Suffolk Municipal Airport. South of Pitchkettle Creek. Most southwest branch of Lake Kilby/Pitchkettle Creek/Lake Meade system (headwater impoundments of Nansemond River). Portion of Portsmouth PWS system.

Cause City/County: Suffolk

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: The Aquatic Life Use is impaired based on dissolved oxygen concentrations below the DEQ minimum allowable instantaneous criteria. Pooled DO data violation rate is 32% (8 violates/ 25 obs.).

James River Basin

Cause Group Code: **G12L-04-TP** **Lake Kilby**

Cause Location: This cause encompasses the entirety of Lake Kilby. Northwest of Suffolk Municipal Airport. South of Pitchkettle Creek. Most southwest branch of Lake Kilby/Pitchkettle Creek/Lake Meade system (headwater impoundments of Nansemond River). Portion of Portsmouth PWS system.

Cause City/County: Suffolk

Use(s): Aquatic Life

Causes(s)/VA Category: Phosphorus, Total/5A

Cause Description: Aquatic Life Use impairment is maintained for nutrients - TP. Lake Kilby pooled TP results: 1 viol/ 2 obs 2015, 2018. TP median yearly values rotate between impairment and therefore not able to delist. TP from 2015 meets criteria however data collected in 2018 does not.

James River Basin

Cause Group Code: G12R-01-PH Eley Swamp

Cause Location: This cause encompasses the area located northeast of Myrtle. Segment is south of Rt 460 and traverses the N&W RR line. Segment extends 2.40 mi. upstream and 2.20 mi. downstream from Rt. 607 crossing. Portion of Portsmouth water supply reservoirs.

Cause City/County: Suffolk

Use(s): Aquatic Life

Causes(s)/VA Category: pH/4C

Cause Description: The Aquatic Life Use impairment, based on pH concentrations below the allowable DEQ minimum criteria (6.0 SU) from the 1998 303d listing is retained due to lack of more recent data. The Natural Conditions Report for pH was approved in Triennial Review.

James River Basin

Cause Group Code: G13E-07-PH Shingle Creek - Tributary to Nansemond R.

Cause Location: This cause encompasses the area NE of Suffolk, near Rt 642. From end of tidal waters (0.2 mi upstream of Portsmouth Blvd) downstream to confluence with Nansemond River. CBP segment JMSMH.

Cause City/County: Suffolk

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: The Aquatic Life Use is impaired (TMDL ID = VAT-G13E-07) based on a site specific failure to meet the minimum pH criteria.(4.0 SU) at station 2-SGL001.00 (11/32) and 8 / 75 obs at 2SGL-SSC000.24-SUF. Connection of upstream portions with canals associated with the Dismal Swamp may impart low pH waters into this segment.

James River Basin

Cause Group Code: **G13E-12-BAC** **Bennett Creek, Tributary to Nansemond River**

Cause Location: This cause encompasses from the headwaters to the mouth, including tidal tributaries. Portion of CBP segment JMSMH.

Cause City/County: Suffolk

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The Recreation Use impairment is retained. The impairment is based on exceedance of the instantaneous criteria for Enterococcus bacteria at stations 2-BEN001.42 (4 exc/ 26 obs) and Suffolk Station 2BEN-SBC000.35-SUF (18 exc / 84 obs). Current data at station 2- BEN001.42 evaluated with the revised bacteria criteria is assessed as insufficient based on one STV exceedance in one or multiple 90-day periods with insufficient data to analyze a geomean.

Nested in EPA approved TMDL for SF for Bennett, Bleakhorn and Knotts Creek 6/3/2010. TMDL ID (VAT-G13E-04) and due date (TMDL due date = 2016) same as original FC impairment.

James River Basin

Cause Group Code: **G14L-01-DO** **Lake Burnt Mills**

Cause Location: This cause encompasses the entirety of Lake Burnt Mills. West of Chuckatuck. Upper northwest portion of Western Branch Reservoir system. Upstream of Rt 603. Impounded headwaters tributary of the Nansemond River. Portion of Norfolk water supply reservoirs.

Cause City/County: Isle Of Wight County; Norfolk

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: The Aquatic Life Use is impaired based on dissolved oxygen concentrations below the DEQ minimum allowable instantaneous criteria. Pooled DO exceedance rate 20% (8 violates/ 40 obs).

Cause Group Code: G14R-02-BAC Carbell Swamp - Lower

Cause Location: This cause encompasses the lower portion of Carbell Swamp. Upstream tributary to the northwest branch of Lake Prince (near Holly Grove Church), including confluent trib. at station originating from the NW. Begins at Branch & Joyner Millpond downstream to

Cause City/County: Isle Of Wight County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Recreation Use impairment is retained based on exceedance of the E.coli bacteria instantaneous criteria (5 viol/ 23 obs) as monitored at the DEQ monitoring station 2-CRL001.83 in previous assessment. Their is insufficient data to assess the E.coli data in the current assessment with one STV exceedance in one a 90-day period with insufficient data to analyze geomean. Nested impairment is within existing Bacteria TMDL boundary with comparable sources and similar land use with reductions adequate for entire watershed.

Cause Location: This cause encompasses the area South of I-64 crossing of Southern Br. E shore trib to Southern Br. Mouth of Creek North of Interstate 64. CBP segment SBEMH. BIBI segment SBEMHa.

Cause City/County: Chesapeake

Use(s): Aquatic Life

Causes(s)/VA Category: Estuarine Bioassessments/5A

Cause Description: Segment listed as impaired in the 2018 IR based on 2016 WoE assessment at station 2-DEC000.58. The WoE analysis collected in 2016 is 5A: IM with high probability of cumulative chronic and acute effects of sediment PAHs and metals. Deep Creek was listed as impaired for benthics in the 2006 IR with CGC G15E-01-01-EBEN and later delisted in the 2012 IR. Station has Cat 5A assessment for both the 2006 and 2016 WoE.

DEQ (C2-2006, 2016) station @ 2-DEC000.58 indicates severe benthic impairment with data collected in 2016.

James River Basin

Cause Group Code: **G15E-02-05-BAC** **Indian River, tributary of Eastern Branch, Elizabeth River**

Cause Location: This cause encompasses the entirety of the Indian River. Located southwest of Broad Creek. Between Campostella Heights and Tanglewood. Entirety of creek including tribs. CBP segment EBEMH.

Cause City/County: Chesapeake

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The Recreation Use is impaired based on two or more STV hits in the same 90-day period with less than 10 samples at DEQ (AQM) monitoring station @ 2-IND000.98. Previously station had 23 exc/ 32 obs of the instantaneous criteria for Enterococcus bacteria. . Bacteria TMDL Development for the Elizabeth River Watershed EPA approved 7/20/2010.

Cause Location: This cause encompasses the area located along the shore of the Deep Water Terminal, south of Paradise Creek. CBP segment SBEMH.

Cause City/County: Chesapeake; Portsmouth

Use(s): Aquatic Life

Causes(s)/VA Category: Estuarine Bioassessments/5A

Cause Description: Aquatic Life Use is impaired based on the 2013 2CSBE003.65 WoE evaluation and assessment of the ALU for estuarine benthic communities. The 2013 assessment determined potential causes based on extremely high concentrations of Low Molecular Weight (LMW) PAHs in sediment. Elevated dissolved inorganic phosphorus and slightly depressed bottom DO.

Virginia Department of Environmental Quality

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H01R-01-BAC** Reed Creek

Cause Location: The upper limit is the headwaters in the Jefferson National Forest on the Sedalia Quad (intersection of State Routes 638 and 764). The impairment ends at the mouth of Reed Creek on the James River below Big Island, Virginia (Snowden, Sedalia and Big Island Quads).

Cause City/County: Bedford County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Reed Creek Bacteria TMDL Load Duration Study received U.S. EPA approval on 6/21/04 [Fed. ID. 7763 / 21565] and SWCB approval on 12/02/04 for these 1998 303(d) Listed waters for fecal coliform bacteria (formerly 2002 thru 2006 VAW-H01R-01). Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters].

Three stations are located within the 8.83 mile impaired waters (NHD mileage correction from 2002 Listing 12.27 miles). 2-RED000.16 (Off Route 501), the original listing station, and two additional stations 2-RED005.36 (Route 637 Bridge) and 2-RED008.32 (Route 122 Bridge).

2-RED008.22- (Rt. 122 Bridge) There are no additional data within the 2014 or 2016 data windows. 2012 results are one (1300 cfu/100 ml) of three samples in excess of the instantaneous criterion. The 2010 IR finds four of 14 E.coli samples exceed the 235 cfu/100 ml WQS instantaneous criterion. Values in excess of the criterion range from 350 to 1300 cfu/100 ml. 2008 IR reports five of 17 E.coli samples exceed. Values in excess of the criterion range the same as 2010.

2-RED005.36- (Rt. 637 Bridge) There are no additional data collected since the 2012 data window where three of three samples exceed the instantaneous criterion within the 2012 data window. 2010 E.coli exceedances of the instantaneous criterion are found in 10 of 14 samples. 2008 IR finds E.coli exceedances in 12 of 17 samples.

2-RED000.16- (Off Rt. 501) The 2020 data window finds two of 12 excursions of the 235 cfu/100 ml instantaneous criterion. The 2014 assessment finds six of 12 E.coli observations exceed the instantaneous criterion. E.coli data within the 2012 data window produce two of 12 excursions of the 235 cfu/100 ml instantaneous criterion. Seven of 33 E.coli samples exceed the instantaneous criterion within the 2010 data window. 2008 results in eight of 38 E.coli samples exceeding the instantaneous criterion and the same range as 2010.

James River Basin

Cause Group Code: **H01R-01-HG** **James River**

Cause Location: James River from Balcony Falls Dam downstream to Holcomb Rock Dam

Cause City/County: Amherst County; Bedford County; Rockbridge County

Use(s): Fish Consumption

Causes(s)/VA Category: Mercury in Fish Tissue/5A

Cause Description: This initial 2010 303(d) Listing is based on 2005 fish tissue collections and new Water Quality Standards effective 2/01/10. Mercury (Hg) exceedances of the DEQ 0.3 parts per million (ppm) tissue value cause impairment of the Fish Consumption Use. No VDH Fish Consumption or Drinking Water Advisories are issued for mercury for these waters. The Virginia Department of Health (VDH) level of concern is 0.5 ppm. Please visit <http://www.deq.virginia.gov/> for more information about mercury contamination and <http://www.vdh.virginia.gov> for VDH Advisories or Bans.

2-JMS279.41 (Blue Ridge Parkway Bridge) - The initial 2010 303(d) Listing is based on 2005 fish tissue analysis where mercury (Hg) is found in two species; smallmouth bass at 0.46 ppm and largemouth bass at 0.40 ppm; each in excess of the new WQS TV based 0.3 ppm. There are no additional data within the 2012, 2014, 2016, 2018, 2020, or 2022 data windows.

2-JMS277.30 - Anecdotal impairment information is found in 2017 fish tissue collections where mercury (Hg) is found in two species exceeding the WQS-based tissue value 0.3 ppm: smallmouth bass (7 fish) at 0.32 ppm; Carp (3 fish) at 0.42 ppm.

James River Basin

Cause Group Code: **H01R-02-BAC** James River

Cause Location: James River mainstem from the Balcony Falls Dam downstream to the mouth of Peters Creek (JM01).

Cause City/County: Rockbridge County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: These waters were previously Listed in 1998 and subsequently de-listed with the 2002 assessment. The Recreational Use impairment returns with the 2014 Integrated Report (IR) due to escherichia coli (E/coli) exceedances of the WQS instantaneous criterion. These waters are addressed in the E. coli TMDL for the James River and Tributaries near Lynchburg, VA which was SWCB approved 7/19/17 and EPA approved 9/27/17 (TMDL ID: 68323).

2-JMS282.28 (Rt. 501 Bridge - S.E. of Glasgow) There are no additional data beyond the 2014 IR. The 2014 IR finds six of 36 E.coli observations exceeding the 235 cfu/100 ml instantaneous criterion. Values in excess of the criterion range from 325 to 1225 cfu/100 ml.

James River Basin

Cause Group Code: H03R-01-BAC Blackwater Creek

Cause Location: Blackwater Creek from the confluence of Tomahawk and Burton Creeks to the mouth at the James River.

Cause City/County: Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (Blackwater Creek) received U.S. EPA approval on 11/4/07 [Fed. ID.35571] and SWCB approval on 12/04/07 for these 1996 and 2004 303(d) Listed waters for fecal coliform. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

Two stations are located within the 10.54 miles of impaired waters: 2-BKW000.40 (Blackwater Creek at Rivermont Ave) and 2-BKW000.40 (Blackwater Creek at Rivermont Ave).

2-BKW000.40 (Blackwater Creek at Rivermont Ave) 2022 results are two of 12 samples in excess of the Statistical Threshold Value. 2020 data window results are four of 12 samples in excess of the instantaneous criterion. 2018 results are four of 12 samples in excess of the instantaneous criterion. (exceedances range from 341 to 6131 cfu/100ml)

2-BKW005.95 (Blackwater Creek at Hill Street [South of Langhorne]) No NEW data in 2022 or 2022 for bacteria. Two of 12 samples in excess of the instantaneous criterion. (exceedances were 325 and 1525 cfu/100ml)

James River Basin

Cause Group Code: **H03R-01-BEN** **Blackwater Creek**

Cause Location: Blackwater Creek from the confluence of Tomahawk and Burton Creeks to the mouth at the James River.

Cause City/County: Lynchburg

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Blackwater Creek was initially impaired for Aquatic Life Use in 2010 due to benthic macroinvertebrate community data collections detailed below.

2-BKW000.40 (Blackwater Creek at Rivermont Ave) Bio impaired ('IM') from three VSCI scores (2011, 2015) averaging 60.3. Habitat assessment scores at this site were low for epifaunal substrate, sediment deposition, bank stability and bank vegetative protection. Blackwater Creek is an urban stream with many non-point sources of pollution, in addition to scouring and high sediment loads during rain events. It has a uniform stream bottom with little instream habitat. 2007 finds Bio 'IM'.

2-BKW004.87 (Blackwater Cr before Ivy Cr confluence) 2022 Cycle: Bio 'IM' from four VSCI scores (2019 IM 17.8; S 51.5; 2018 F 62.2, 2015 S 50.3). Bio 'IM' from three VSCI scores (2011, 2015) averaging 52.1. 2007, 2009-2010 finds Bio - 'IM'. This section of Blackwater Creek has an excellent riparian zone for an urban area, but has poor bank stability, increased embeddedness and sediment deposition, and marginal epifaunal substrate.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H03R-02-BAC** Fishing Creek

Cause Location: Fishing Creek mainstem from its confluence with the James River upstream to its headwaters.

Cause City/County: Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (Fishing Creek) received U.S. EPA approval on 11/4/07 [Fed. ID.35572] and SWCB approval on 12/04/07 for these 1996 and 2004 303(d) Listed waters for fecal coliform. These waters were incorporated in the E. coli TMDL Development for the James River and Tributaries near Lynchburg, VA located in the Counties of Amherst, Bedford, and Campbell and in the City of Lynchburg (EPA approved 9/27/17, SWCB approved 7/19/17) [TMDL IDs 68321,68326]. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

One station is located within the 6.32 miles of impaired waters: 2-FSG000.85 (Ambient, Lynchburg Area TMDL)(Fishing Creek at Winchester Rd) During the 2016 data window, five of 12 samples were observed in excess of the instantaneous criterion.

James River Basin

Cause Group Code: **H03R-03-BAC** Ivy Creek

Cause Location: Ivy Creek mainstem from its headwaters downstream to its confluence with Blackwater Creek.

Cause City/County: Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (Ivy Creek) received U.S. EPA approval on 11/4/07 [Fed. ID.35573] and SWCB approval on 12/04/07 for these 1996 and 2004 303(d) Listed waters for fecal coliform. These waters were incorporated in the E. coli TMDL Development for the James River and Tributaries near Lynchburg, VA located in the Counties of Amherst, Bedford, and Campbell and in the City of Lynchburg (EPA approved 9/27/17, SWCB approved 7/19/17) [TMDL IDs 68321,68326]. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

2-IVA000.22 (Ivy Creek at Business Rt 501) 2022 data window finds two of 12 samples in excess of the Statistical Threshold Value. Five of 12 samples in excess of the instantaneous criterion during the 2020 data window. The 2016 data window finds two of 12 samples in excess of the instantaneous criterion.

2-IVA005.43 (Peaks View Park - Admore Bridge) Two of 12 samples in excess of the instantaneous criterion during the 2016 data window.

2-IVA006.38 (Ivy Creek at Wigginton Rd) No current data. E.coli impairment carries from 2/12 exceedances from a previous cycle.

2-IVA012.13 (Ivy Creek at Route 662) Five of 12 samples in excess of the instantaneous criterion (excursion range: 250-350 cfu/100ml) during the 2018 data window.

2IVA-MJ-IC-ACB - No current data. One historical [Lv.2] elevated E.coli sample at 300.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H03R-03-BEN** Ivy Creek

Cause Location: Ivy Creek mainstem from its headwaters downstream to its confluence with Blackwater Creek.

Cause City/County: Lynchburg

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Ivy Creek was initially impaired for Aquatic Life Use in 2010 due to benthic macroinvertebrate community data collections detailed below.

2-IVA000.05 (upstream of confluence with Blackwater Cr.) - 2020 Cycle: Bio assessed as impaired ('IM') from two VSCI scores 62.6 (S 2015) & 71.5 (F 2018). Ivy Creek had numerous extreme high flows during 2018. 2018 Cycle: Bio 'IM' from three VSCI samples (2011, 2015) averaging 53. Ivy Creek is an urban stream with obvious dumping of trash and debris, including bricks, tires, and metal objects. The upstream portion of the sample reach has homes, lawns, and construction present up to the edges of the banks. This site was assessed as 'IM' in 2014. During the 2010 data window, Bio 'IM' from 2007 benthic macroinvertebrate community data collection. Ivy Creek had very low flow during the spring 2007 sampling event.

2-IVA005.75 (Peaks View - Tenbury bridge) - Bio Reserve Judgement ('J') from four VSCI scores averaging 58.3 (2011, 2015). Ivy Creek flows through a city park and has high sediment deposition. However, satellite imagery shows that much of the upstream riparian zone is wooded or consists of fields and medium intensity residential areas. In 2015, 2-IVA005.75 had VSCI scores near the assessment threshold with a benthic community indicative of pressure from scour and sediment. In 2014, 2-IVA005.75 was assessed as fully supporting ('FS') but a downstream station (2-IVA000.05) was assessed as 'IM'.

2-IVA012.13 (at Rt. 662) - Bio 'IM' from four VSCI scores (2011, 2015) averaging 49.3. Heavy, fresh sediment deposition noted in stream at time of sampling. Available habitat was heavily embedded in sediment. This watershed is being rapidly developed and will likely degrade further due to increased runoff from new neighborhoods. Sampling in 2007 found Bio 'IM'.

James River Basin

Cause Group Code: **H03R-04-BAC James River**

Cause Location: Holcomb Rock Dam to the Archer Creek confluence.

Cause City/County: Amherst County; Bedford County; Campbell County; Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (James River) received U.S. EPA approval on 11/4/07 [Fed. ID.35014] and SWCB approval on 12/04/07 for these 1996 and 2004 303(d) Listed waters for fecal coliform. These waters were incorporated in the E. coli TMDL Development for the James River and Tributaries near Lynchburg, VA located in the Counties of Amherst, Bedford, and Campbell and in the City of Lynchburg (EPA approved 9/27/17, SWCB approved 7/19/17) [TMDL IDs 68321,68326]. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

Two stations are located within the 10.53 miles of impaired waters: 2-JMS258.54 and 2-JMS270.84.

2-JMS258.54 (Under Route 29 Bridge - Percivals Island Lot) (2022 data window) Two of 34 samples in excess of the Statistical Threshold Value. (2020 data window) Eight of 34 samples in excess of the instantaneous criterion. (2018) Ten of 34 samples in excess of the instantaneous criterion.

2-JMS270.84 (At Power Plant at Holcomb Rock Dam) (2022 data window) Three of 36 samples in excess of the Statistical Threshold Value. (2020 data window) Five of 36 samples in excess of the instantaneous criterion. (2018 data window) Seven Two of 36 samples in excess of the instantaneous criterion.

James River Basin

Cause Group Code: **H03R-04-PCB James River, Slate River**

Cause Location: The James River from Big Island dam (below Blue Ridge Parkway) downstream to the I-95 bridge James River Bridge in Richmond including its tributaries Hardware River up to Rt. 6 bridge and Slate River up the Rt. 676 bridge.

Cause City/County: Albemarle County; Amherst County; Appomattox County; Bedford County; Buckingham County; Campbell County; Chesterfield County; Cumberland County; Fluvanna County; Goochland County; Henrico County; Lynchburg; Nelson County; Powhatan County; Richmond

Use(s): Fish Consumption; Wildlife

Causes(s)/VA Category: PCBs in Fish Tissue/5A; Polychlorinated biphenyls (PCBs)/5A

Cause Description: Fish tissue data are reviewed by the VDH in making an advisory determination. A detailed presentation of the data may be found using an interactive mapping application at <https://www.vdh.virginia.gov/environmental-health/public-health-toxicology/fish-consumption-advisory/>

2-JMS258.54 (Under Route 29 Bridge - Percival Island Lot) Three PCB water column samples collected during the 2020 data window (one excursion >640 pg/L): Dry Weather 222.03 pg/L (7/19/2017), Wet Weather 614.76 pg/L (2/8/2018), and Wet Weather 3215.95 pg/L (WW, 9/17/2018). 2005 four species analyzed - Redhorse sucker exceeds WQS TV of 20 ppb at 55.35 ppb. Remaining species analyzed Flathead catfish at 158.84 ppb, 554.07 ppb, and 29.78 ppb; Gizzard shad at 278.20 ppb; and Channel catfish at 51.01 ppb.

2-JMS213.00 (2005 FT/Sediment) (near Wingina at State Wildlife Management Area) 2005 three species analyzed - Flathead catfish exceeds WQS TV of 20 ppb at 228.28 ppb, 51.66 ppb, and 29.15 ppb. Remaining species analyzed Redhorse sucker at 81.11 ppb; and Channel catfish at 113.99 ppb.

2BJMS182.94 (2014 FT/Sediment) (Hardware River Wildlife Management Area) 2014 three species analyzed - American eel exceeds WQS TV of 20 ppb at 41.92 ppb and 34.98 ppb. Remaining species analyzed Channel catfish at 28.68 ppb; and Flathead catfish at 55.54 ppb and 61.18 ppb.

2-JMS189.31 (2014 FT/Sediment)(DGIF Boat Launch at G.S. below Route 20 Bridge) - Water column PCB samples find no exceedances of the 640 pg/L WQS at 123.57 pg/L (DW, 7/19/2017), 252.40 pg/L (WW, 2/8/2018), and 111.39 pg/L (WW, 8/23/2018). 2014 four species analyzed - American eel exceeds WQS TV of 20 ppb at 35.73 ppb and 38.79 ppb. Remaining species analyzed Flathead catfish at 116.44 ppb, 230.66 ppb, and 41.52 ppb; Gizzard shad at 77.40 ppb; and Carp at 133.62 ppb, 579.34 ppb, and 419.28 ppb.

2-JMS176.63 (2005 FT/Sediment)(Route 15 Bridge) 2005 two species analyzed - Channel catfish exceeds WQS TV of 20 ppb at 92.29 ppb. Remaining species analyzed Carp at 339.35 ppb. 2014 one species was analyzed - carp exceeds WQS TV of 20 ppb at 286.79 ppb.

2-FSG000.85 (Fishing Cr at Winchester Rd) The 2020 data window finds two Wet Weather exceedances of the 640 pg/L water column PCB criterion: 2845 pg/L (2/14/18) and 8907 pg/L (9/17/18).

In addition, the impairment is based on PCB fish tissue value exceedances at multiple stations including 2-JMS166.50, 2-JMS157.28, 2-JMS140.00, 2BJMS118.99, 2-JMS127.50, 2CJMS110.00, 2-SLT000.20, et al. An exceedance of the human health water quality standard for PCBs occurred at stations 2-JMS157.28, 2-JMS140.00, 2-JMS117.35, 2-JMS110.34, 2-BJMS111.17-S, 2-JMS110.44.

VDH Fish Advisory Information - Effective 12/13/04: James River main stem from Big Island dam downstream to the I-95 Bridge in Richmond to include a portion of the Hardware and Slate Rivers. The advisory recommends that no more than two meals/month of the following species be consumed. Gizzard Shad Carp American Eel Flathead Catfish Quillback Carpsucker Visit the VDH website for more details: <https://www.vdh.virginia.gov/environmental-health/public-health-toxicology/fish-consumption-advisory/>

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H03R-05-BAC** **Burton Creek**

Cause Location: Burton Creek from its headwaters to its mouth on Tomahawk Creek.

Cause City/County: Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (Burton Creek) received U.S. EPA approval on 11/4/2007 [Fed. ID.35017] and SWCB approval on 12/04/2007 for these 1996 and 2004 303(d) Listed waters for fecal coliform. These waters were incorporated in the E. coli TMDL Development for the James River and Tributaries near Lynchburg, VA located in the Counties of Amherst, Bedford, and Campbell and in the City of Lynchburg (EPA approved 9/27/17, SWCB approved 7/19/17) [TMDL IDs 68321,68326]. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

One station is located within the 3.48 miles of impaired waters:

2-BUN001.64 (Off Fort Ave., Below Rub's Rest.) No new data since the 2016 data window where one of 12 samples was found in excess of the instantaneous criterion. One of 12 samples in excess of the instantaneous criterion within the 2014 data window. Ten of 24 samples in excess of the instantaneous criterion during the 2012 data window.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H03R-05-BEN** **Burton Creek**

Cause Location: Burton Creek from its headwaters to its mouth on Tomahawk Creek.

Cause City/County: Lynchburg

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Burton Creek was listed for Aquatic Life Use impairment during the 2006 data window based on benthic macroinvertebrate community data collected at the following station.

2-BUN000.04 - (off Rhonda Rd near Tomahawk Cr. confluence) Bio impaired ('IM') during the 2022 data window from five VSCI Scores: Fall 49.85, S 22.78 (2019); Fall 58.19 (2018); Fall 40.8, S 42.55 (2015). The stream has an urban watershed characterized by unstable banks and fine sediment deposition resulting in poor habitat quality. Previous data window (2018) found Bio 'IM' from four VSCI scores (2011, 2015) averaging 41.8. Biologist noted during 2007 sampling that Burton Creek suffers from heavy algal growth in addition to fine sediments covering the stream bottom. Habitat assessment scores were low for bank stability and bank vegetative protection. An abundance of trash was noted in the stream at the time of sampling.

James River Basin

Cause Group Code: H03R-06-BAC Judith Creek

Cause Location: Judith Creek from its headwaters to the confluence with the James River.

Cause City/County: Bedford County; Lynchburg

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River Bacteria TMDL Study (Judith Creek) received U.S. EPA approval on 11/4/07 [Fed. ID.35015] and SWCB approval on 12/04/07 for these 1996 and 2004 303(d) Listed waters for fecal coliform. These waters were incorporated in the E. coli TMDL Development for the James River and Tributaries near Lynchburg, VA located in the Counties of Amherst, Bedford, and Campbell and in the City of Lynchburg (EPA approved 9/27/17, SWCB approved 7/19/17) [TMDL IDs 68321,68326]. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. In 2019, new criterion states that E. coli bacteria shall not exceed a geometric mean of 126 counts/100ml and shall not have greater than a 10% excursion frequency of a statistical threshold value (STV) of 410 counts/100 ml, both in an assessment period of up to 90 days [9VAC25-260-170].

Two stations are located within the 11.1 miles of impaired waters: 2-JTH001.52 (Rt. 645 (Trents Ferry Road)) 2016 data window finds one of 12 samples in excess of the instantaneous criterion. One of 12 samples in excess of the instantaneous criterion and three of 27 samples in excess of the instantaneous criterion within the 2014 and 2012 data windows, respectively.

2-JTH006.53 (crossing of 761 & 647 just off 501 past Boonsboro) (2018 data window) Eight of 12 samples in excess of the instantaneous criterion.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H03R-06-BEN** **Judith Creek**

Cause Location: Judith Creek from its headwaters to the confluence with the James River.

Cause City/County: Bedford County; Lynchburg

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: The entire length of Judith Creek is impaired for the Aquatic Life Use based on benthic macroinvertebrate community data collection.

2-JTH006.53 (crossing of 761 & 647 just off 501 past Boonsboro) Bio impaired ('IM') from four VSCI scores (2015, 2019) averaging 59.8 during the 2022 data window. Parts of banks were scoured and failing; sediment deposition was impacting habitat. Habitat scores indicate a high probability of stress to aquatic life from lack of available suitable habitat. Bio 'Reserve Judgement ('J') from four VSCI scores (2011, 2015) averaging 66.2 during the 2018 and 2020 data windows. This stream is small and has unstable banks with little vegetative protection. 2008 data was assessed as impaired. This station has shown some improvement in VSCI score. Further monitoring is required.

2-JTH001.52 (Rt. 645, Trents Ferry Rd.) - 2008-2010 Bio fully supporting ('FS').

Cause Location: Buffalo River from its confluence with Long Branch downstream to its confluence with Franklin Creek.

Cause City/County: Amherst County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: The Long Branch and Buffalo River (Buffalo River) Sediment TMDL for a Benthic Impairment received U.S. EPA approval on 11/21/2013. [Fed. ID.55241] and SWCB approval on 3/28/20104 for these 2008 303(d) Listed impairments to the benthic community.

Station ID:

2-BUF026.43 (Bio)(Buffalo River @ Rt 60) - No additional data since the 2014 data window:

IM - Three 2011 Virginia Stream Condition Index (VSCI) surveys average 54.9. This stream has good riffles but algae are dominant, indicating potential nutrient enrichment. It also has excessive sediment deposition, likely due to its location in an agricultural watershed with pasture adjacent to the left bank.

James River Basin

Cause Group Code: **H21R-01-BAC** **Horsepen Creek**

Cause Location: Horsepen Creek from its headwaters to its mouth on the Slate River

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2016 cycle, Horsepen Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 2/12 at

2BHOX0.62.

The impairment is considered nested within the James River (Slate River) Bacterial TMDL; therefore, it is considered a Category 4A water.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H21R-01-BEN** **Horsepen Creek**

Cause Location: Horsepen Creek from its headwaters to its mouth on the Slate River

Cause City/County: Buckingham County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Horsepen Creek was impaired of the Aquatic Life Use due to benthic monitoring at 2BHOX000.62 during 2009 and 2012.

Biologist notes from 2009 indicated that the riffles were highly embedded and unstable, which was likely a result of relatively unstable stream banks and heavy local watershed erosion. Sediment is a likely stressor in this stream.

Further monitoring in 2017 was variable and an assessment could not be determined.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: H21R-02-BAC Walton Fork

Cause Location: Walton Fork from its confluence with Ripley Creek to its mouth on the Slate River

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Walton Fork downstream of the confluence with Ripley Fork was impaired of the Recreation Use during the 2018 cycle due to an E. coli exceedance rate of 4/12 at 2-WTN002.50.

The segment is located within the study area for the James River (Slate River) Watershed Bacterial TMDL, which was approved by the EPA on 9/20/2007 and by the SWCB on 7/31/2008. TMDL implementation would be expected to bring Walton Fork into compliance; therefore, the segment is considered nested.

The exceedance rate was 6/24 in the 2022 cycle; in addition, it was 6/17 at 2-WTN001.23.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H21R-02-BEN** **Walton Fork**

Cause Location: Walton Fork from its confluence with Ripley Creek to its mouth on the Slate River

Cause City/County: Buckingham County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Lower Walton Fork was impaired of the Aquatic Life Use in the 2016 cycle to benthic monitoring at 2-WTN002.50. This stream had riffles consisting of mostly gravel and a little cobble. There was excessive sedimentation throughout the stream and an abundance of periphyton.

2016 benthic monitoring at 2-WTN002.08 was inconclusive.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H21R-03-BAC** **North River**

Cause Location: The North River from the confluence with an unnamed tributary near Route 56 to its headwaters

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The North River from its headwaters at Meadow Creek to its mouth was impaired of the Recreation Use in the 2002 cycle. The impairment was subsequently addressed in the James River Watershed (Slate River) Bacterial TMDL which was approved by the EPA on 9/20/2007 and by the SWCB on 7/31/2008. The lower portion was later partially delisted in the 2008 cycle due to an acceptable E.coli exceedance rate (2/23) at 2-NTH001.65.

During the 2016 cycle, the E. coli exceedance rate was 4/12 at 2-NTH003.88. No additional data has been collected.

Note: the segment was shortened in the 2018 cycle to correct the location of the headwaters.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H21R-04-BAC** **Slate River**

Cause Location: The Slate River from the confluence with North Fork downstream to its confluence with Walton Fork

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: A portion of the Slate River was first listed for the Recreation Use in the 2002 IR. The segment length was adjusted to Grease Creek downstream to Walton Fork in the 2004 cycle. The segment was addressed in the James River (Slate River Watershed) Bacterial TMDL which was approved by the EPA on 9/20/2007. A portion was partially delisted in the 2008 cycle and the impairment now extended from the North River to Walton Fork.

The E. coli exceedance rate was 3/12 at 2-SLT024.72 during the 2020 cycle.

NOTE:

During the 2008 cycle, a downstream portion of the Slate River from Walton Fork to Joshua Creek was considered impaired due to an E. coli exceedance rate of 3/22 at 2-SLT018.85. The segment was mistakenly combined with the upstream TMDL segment. It was split off in the 2018 cycle and considered nested. See fact sheet H21R-05-BAC

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H22R-01-BAC** **Slate River**

Cause Location: Slate River from its confluence with Joshua Creek to its mouth at the James River.

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Slate River from the confluence with Sharps Creek downstream to its mouth was initially listed as impaired of the Recreation Use in the 2002 cycle due to fecal coliform exceedances at 2-SLT003.88.

The Slate River Bacterial TMDL was approved by the EPA on 9/20/2007 and by the SWCB on 7/31/2008.

The impairment was later converted to E. coli and was extended upstream to the confluence with Joshua Creek because of additional exceedances at 2-SLT014.52.

The E. coli exceedance rates during the 2022 cycle were: 10/36 at 2-SLT003.68 3/11 at 2-SLT014.52 (2018 cycle)

It remains impaired due to 2 or more STV hits in the same 90-day period with < 10 samples.

James River Basin

Cause Group Code: **H22R-02-BAC** Muddy Creek

Cause Location: Muddy Creek from its headwaters to its mouth on the Slate River

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Muddy Creek was impaired of the Recreation Use in the 2008 cycle due to E. coli exceedances at 2-MYC000.50. The exceedance rate was 6/12 in the 2014 cycle; no additional monitoring has been conducted.

The creek is located within the study area for the James River (Slate River) Watershed Bacterial TMDL, which was approved by the EPA on 9/20/2007 and by the SWCB on 7/31/2008. The impairment is considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H22R-04-BAC** **Hunts Creek**

Cause Location: Hunts Creek from its headwaters to its mouth on the Slate River.

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Hunts Creek was impaired of the Recreation Use in the 2014 cycle due to an E. coli exceedance rate of 2/12 at 2-HUS002.24. The stream is located within the study area for Slate River Bacterial TMDL, which was approved by the EPA on 09/20/2007, and is considered nested (Category 4A.) No additional E. coli monitoring has been conducted.

The stream extent was corrected in the 2020 cycle.

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: This segment is impaired due to exceedances of the e-coli WQS at station: 2-IVC008.09 (4 exceedances of 12 samples for e-coli, no new data 2022). In 2022, there is insufficient E.coli data at 2-IVC005.19 to assess recreation use with one STV exceedance in multiple 90-day periods but insufficient data to analyze geomean (analysis based on the revised E.coli WQS). Initial Listing Date: 2014

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-H26R_IVC02A00 / Ivy Creek / Ivy Creek from its confluence with Little Ivy Creek downstream to the 5 mile upper limit of the PWS designation for the RWSA-SF Rivanna River Public Water Intake.	5A	Escherichia coli (E. coli)	2014	L	4.02

James River Basin

Cause Group Code: H28R-10-BAC Biscuit Run

Cause Location: Biscuit Run and tributaries from the confluence with the tributary at the mobile home park downstream to its confluence with Moores Creek.

Cause City/County: Albemarle County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli bacteria WQS at Rivanna Conservation Alliance level III station 2-BSC-BSC01-RCA (revised WQS- Two STV exceedances in the same 90-day period with less than 10 samples = Impaired). Initial Listing Date: 2022. This assessment unit is nested into the EPA approved Moores Creek bacteria TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H33R-01-BAC** **Solomons Creek**

Cause Location: Solomons Creek from its headwaters downstream to its mouth at the James River.

Cause City/County: Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Solomons Creek was assessed as not supporting of the Recreation Use goal in the 2010 cycle based on an E. coli exceedance rate of 7/12 at 2-SOL001.00 (Route 621.)

As this impairment is within the study area for the James River - Piedmont Region TMDL, which was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009, Solomons Creek is considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H33R-02-DO** Deep Creek

Cause Location: Segment begins at the confluence of Deep Creek with Sallee Creek, and extends downstream to the Route 684 bridge.

Cause City/County: Powhatan County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: During the 2008 cycle, Deep Creek from Maxey Mill Creek to the Route 684 bridge (rm 3.00) was assessed as impaired of the Aquatic Life Use because of a dissolved oxygen exceedance rate of 2/12 at 2-DCR003.00. The TMDL was due in 2020, but natural conditions are suspected.

The DO exceedance rates at other stations were acceptable in the 2010 cycle (2/26 at 2-DCR007.93 and 1/11 at 2-DCR013.89); therefore, the upstream segment was shortened to the confluence with Sallee Creek.

The exceedance rate at 2-DCR003.00 was 3/23 during the 2016 cycle.

Additional monitoring is recommended.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause Group Code: **H33R-06-BAC** **James River**

Cause Location: The James River from its confluence with the Rivanna River downstream to the confluence with Big Lickinghole Creek.

Cause City/County: Cumberland County; Fluvanna County; Goochland County; Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2016 cycle, the James River from the Rivanna River downstream to Big Lickinghole Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 8/48 at 2-JMS157.28, which is located at the Route 45 bridge at Cartersville.

The exceedance rate was acceptable in the 2020 cycle (4/84); however, it was 2/12 at station 2-JMS166.50, and 4/12 at 2BJMS144.63. Therefore, the segment remained impaired.

The new bacteria criteria were implemented in the 2022 cycle, 2BJMS144.63 was impaired due to 2 or more STV hits in the same 90-day period with < 10 samples. There was insufficient information to assess 2-JMS166.50, so the impairment at that station was carried over.

The TMDL was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009 and the segment is considered Category 4A.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-H33R_JMS01A98 / James River / The James River from its confluence with the Rivanna River at river mile 166.61 downstream to the confluence with Big Lickinghole Creek at river mile 143.35.	4A	Escherichia coli (E. coli)	2016	L	23.09

James River Basin

Cause Group Code: **H33R-07-DO** **Muddy Creek**

Cause Location: Muddy Creek from the confluence with Davis Creek downstream to its mouth at the James River.

Cause City/County: Cumberland County; Powhatan County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: Muddy Creek was assessed as not supporting of the Aquatic Life Use in the 2018 cycle due to a dissolved oxygen exceedance rate of 4/12 at 2-MUY01.23, which is located at the Route 684 bridge.

The exceedance rate was 6/24 in the 2022 cycle.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H33R-08-BAC** Steger Creek

Cause Location: Steger Creek from its headwaters to the extent of backwater from Upper Powhatan Lake.

Cause City/County: Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The upper portion of Steger Creek was impaired of the Recreation Use during the 2018 cycle due to an E. coli exceedance rate of 4/12 at monitoring station 2-STG002.00, which is located at the Route 684 bridge.

The new bacteria criteria were implemented in the 2022 cycle. Although the data from the 2018 cycle would have been assessed as insufficient for assessment under the new criteria, the impairment is carried over.

It is considered nested in the upper James River TMDL in the James River and Tributaries - Lower Piedmont report, which was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H33R-09-BAC** Gaddes Creek

Cause Location: Gaddes Creek from its headwaters to its mouth at the James River.

Cause City/County: Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Gaddes Creek was impaired of the Recreation Use during the 2018 cycle due to an E. coli exceedance rate of 2/12 at monitoring station 2BGAD001.12, which is located at the Cosby Road (Rt. 621) bridge.

The new bacteria criteria were implemented in the 2022 cycle. Although the data from the 2018 cycle would have been assessed as insufficient for assessment if the new criteria had been effective at that time, the impairment is carried over as per guidance.

It is considered nested in the upper James River TMDL in the James River and Tributaries - Lower Piedmont report, which was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H34R-01-BAC** Byrd Creek

Cause Location: Segment comprises all of Byrd Creek, from its headwaters to its mouth at the Little River.

Cause City/County: Fluvanna County; Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Byrd Creek was initially considered fully supporting but threatened of the Recreation Use in 1998. It was later identified by the EPA for listing consideration. In the 2002 cycle, the segment was downgraded to impaired of the Recreation Use support goal based on fecal coliform standard exceedances recorded at the Route 603 bridge (2-BYR003.35); therefore the TMDL was due in 2010.

During the 2008 cycle, the impairment was converted to E. coli and the segment length was corrected.

Byrd Creek was impaired during the 2010 cycle: 2-BYR000.50 (2/10) 2-BYR003.35 (2/12) 2-BYR018.04 (1/11 - FS) 2-BYR021.58 (6/25)

Byrd Creek remained impaired during the 2020 cycle with the following violation rates: 2-BYR003.35 (0/10 - FS) 2-BYR021.58 (3/11)

The new bacteria WQS were implemented in the 2022 cycle. Although the 2020 result would have been insufficient information if it had been analyzed under the current criteria, the impairment will be carried over.

The TMDL was completed as part of the James River and Tributaries - Lower Piedmont Bacterial TMDL, which was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009. The segment is therefore considered a Category 4A water.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-H34R_BYR01A98 / Byrd Creek / Byrd Creek from its headwaters at the confluence of Kent Branch and Venable Creek to its mouth at the Little River (branch of the James River) at Elk Island.	4A	Escherichia coli (E. coli)	2008	L	19.36

James River Basin

Cause Group Code: **H34R-03-BAC** **Venable Creek**

Cause Location: Venable Creek from its headwaters to its mouth at Byrd Creek.

Cause City/County: Fluvanna County; Louisa County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, Venable Creek was assessed as impaired of the Recreation Use due to an E. coli violation rate of 3/12 at the Route 601 bridge (2-VNB001.89).

Venable Creek is a tributary of Byrd Creek, which is also impaired due to bacteria. The TMDL for Byrd Creek was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009. The TMDL requires a 100% reduction in anthropogenic direct loads, 99% reductions for agriculture, residential and urban loads, and a 71% reduction in wildlife loads; therefore, Venable Creek is considered a nested water (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H35R-01-BAC** **Willis River**

Cause Location: Willis River from its headwaters to its confluence with Little Willis River

Cause City/County: Buckingham County; Cumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 1998 cycle, Willis River from the confluence with Reynolds Creek downstream to its mouth was impaired of the Recreation Use due to fecal coliform exceedances. The impairment was addressed in the Willis River Fecal Coliform TMDL, which was approved by the EPA on 5/31/2002 and by the SWCB on 6/17/2004.

The Willis River from its headwaters to the confluence with the Little Willis River was first listed for a bacterial TMDL in the 2004 cycle (fecal coliform). It converted to an E. coli impairment in the 2016 cycle. The exceedance rates were as follows in the 2022 cycle:

2-WLS042.78 - 12/36 2-WLS055.54 - 4/12 (2016 cycle)

It remains impaired due to 2 or more STV hits in the same 90-day period with < 10 samples.

NOTE: In older cycles, the Recreation Use impairments on upstream Willis River were considered addressed in the TMDL. In the 2018 cycle, the upstream impairment was changed to nested.

James River Basin

Cause Group Code: H35R-02-BAC XQM - Willis River, UT

Cause Location: An unnamed tributary to the Willis River near Route 638

Cause City/County: Buckingham County

Use(s): Recreation

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: XQM, an unnamed tributary of the Willis River, was initially considered impaired of the Recreation Use due to a fecal exceedance rate of 3/9 at station 2-XQM000.03 in the 2004 cycle.

The stream is located within the study area for the Willis River Fecal Coliform TMDL, which was approved by the EPA on 5/31/2002 and by the SWCB on 6/17/2004.

In previous cycles, it was considered part of the TMDL, however in the 2018 cycle it was determined that the stream itself was not specifically addressed so the impairment is considered nested.

Cause Location: Willis River from the confluence of Reynolds Creek to its mouth.

Cause City/County: Cumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 1998 cycle, Willis River from the confluence with Reynolds Creek downstream to its mouth was impaired of the Recreation Use due to fecal coliform exceedances. The impairment was addressed in the Willis River Fecal Coliform TMDL, which was approved by the EPA on 5/31/2002 and by the SWCB on 6/17/2004.

During the 2020 cycle, the E. coli exceedance rate was 8/35 at 2-WLS004.27.

NOTE:

In previous cycles, the Recreation Use impairments on upstream Willis River were considered addressed in the TMDL. In addition, fact sheet H36R-01-BAC extended from the northern Cumberland State Forest boundary to the mouth. In the 2018 cycle, the length of this fact sheet is shortened to match the original TMDL segment (also see fact sheet H36R-07-BAC) and the upstream areas were changed to nested.

James River Basin

Cause Group Code: **H36R-04-BAC** **Hatcher Creek**

Cause Location: Hatcher Creek from the headwaters to its mouth at the Willis River

Cause City/County: Buckingham County; Cumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Hatcher Creek was considered impaired of the Recreation Use in the 2010 cycle due to E. coli exceedances at 2-HCH004.81.

The stream is located within the study area for the Willis River Fecal Coliform TMDL, which was approved by the EPA on 5/31/2002 and by the SWCB on 6/17/2004, and is considered nested.

The exceedance rate was 2/12 during the 2016 cycle. No additional monitoring has been conducted.

James River Basin

Cause Group Code: **H36R-05-BEN** Reynolds Creek

Cause Location: Reynolds Creek from its headwaters to its mouth at the Willis River

Cause City/County: Cumberland County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Reynolds Creek was impaired of the Aquatic Life Use in the 2014 cycle due to monitoring at 2-RLD000.48 in 2009 and 2012.

This stream is in the Cumberland State Forest. It is characterized by marginal bank stability, excessive sediment deposition, and marginal epifaunal substrate. Biologist notes from 2009 and 2012 indicate very unstable habitat, mostly consisting of leaf packs and woody debris that were covered in sediment. Heavy local watershed erosion was also noted. In 2012 there was noted beaver activity affecting habitat availability.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H36R-07-BAC** **Willis River**

Cause Location: Willis River from the southern boundary of the Cumberland State Forest downstream to the confluence of Reynolds Creek.

Cause City/County: Cumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 1998 cycle, Willis River from the confluence with Reynolds Creek downstream to its mouth was impaired of the Recreation Use due to fecal coliform exceedances. The impairment was addressed in the Willis River Fecal Coliform TMDL, which was approved by the EPA on 5/31/2002 and by the SWCB on 6/17/2004.

In older cycles, all of the Recreation Use impairments on upstream Willis River were considered addressed in the TMDL. In addition, fact sheet H36R-01-BAC extended from the southern Cumberland State Forest boundary to the mouth. In the 2018 cycle, the length of this fact sheet is shortened to match the original TMDL segment and the upstream areas were changed to nested. This impairment now extends from the southern boundary of the Cumberland State Forest downstream to Reynolds Creek.

The E. coli exceedance rates were as follows in the 2020 cycle: 2-WLS025.32 - 11/35 (IM) 2BWLS017.93 - 1/1 (W) 2-WLS030.32 - 5/11 (IM)

There was insufficient information to assess E.coli during the 2020 cycle due to the new bacteria criteria (one STV exceedance in one or multiple 90-day periods but insufficient data to analyze geomean); therefore, the impairment will be carried over.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H37R-01-BAC** **Big Lickinghole, Little Lickinghole, and White Hall Creeks**

Cause Location: The mainstems of Big Lickinghole Creek downstream of Old Miss Branch, Little Lickinghole Creek, and White Hall Creek.

Cause City/County: Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The creeks were initially considered impaired of the Recreation Use support goals during the 2002 cycle based on water quality monitoring performed at the confluence of Big Lickinghole Creek and Little Lickinghole Creek (2-BLG002.60).

During the 2008 cycle, TMDL monitoring for E. coli was conducted throughout the watershed. Although several stations on the creeks had acceptable violation rates, including the original listing station 2-BLG002.60 which had a violation rate of 2/23, the original segmentation was maintained. The impairment converted to E. coli. It was determined that a portion of Little Lickinghole Creek that had been included in the original impairment is actually called White Hall Creek. Since a TMDL station on White Hall Creek showed impairment, the stream continued to be included in the segment.

The TMDL was completed during the 2010 cycle as part of the James River and Tributaries - Lower Piedmont Region TMDL, which was adopted by the EPA on 6/11/2008 and by the SWCB on 4/28/2009 (Category 4A.)

The following were the violation rates on the streams during the 2010 cycle. 2-BLG002.60 - 2/23 2-BLG006.41 - 3/12 (IM) 2-BLG008.60 - 1/12 2-BLG011.41 - 0/1 2-BLG012.33 - 0/12 2-LIH005.28 - 4/24 (IM) 2-WHC000.46 - 2/12 (IM)

Based on the acceptable violation rates on Big Lickinghole Creek at the upstream stations, the portion of the stream upstream of Old Miss Branch were delisted and classified as Category 2C.

The segment remained impaired in the 2014 cycle based on an E. coli exceedance rate of 3/12 at 2-LIH005.28. Monitoring in the 2016 cycle at station 2-WHC000.46 was acceptable (0/11); therefore, further monitoring was recommended.

Monitoring at 2-BLG002.60 during the 2020 cycle continued to show impairment (3/12).

New bacteria criteria were implemented in the 2022 cycle. Monitoring was conducted at 2-BLG002.60, 2-LIH005.28, and 2-BLG006.41, however all three stations had insufficient information for assessment.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-H37R_BLG01A98 / Big Lickinghole Creek/Little Lickinghole Creek/White Hall Creek / Big Lickinghole (BLG), Little Lickinghole (LIH) and White Hall Creeks (WHC), excluding BLG upstream of Old Miss Branch.	4A	Escherichia coli (E. coli)	2008	L	22.53

James River Basin

Cause Group Code: H37R-02-BAC Tarred Rat Creek

Cause Location: The mainstem of Tarred Rat Creek.

Cause City/County: Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, Tarred Rat Creek was monitored for E. coli as a part of the Big Lickinghole and Little Lickinghole Creeks' TMDL. The creek was assessed as not supporting of the Recreation Use based on an E. coli exceedance rate of 3/11 at the Route 687 bridge (2-TRT001.23).

The TMDL was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009. The Big and Little Lickinghole Creeks require a 100% reduction in anthropogenic direct loads, 99% reductions in agricultural, residential, and urban loads, and a 53% reduction in wildlife loads. Due to the large reductions, implementation is expected to address the Tarred Rat Creek impairment as well; therefore, the segment is considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause Group Code: **H38R-03-BAC** Beaverdam Creek

Cause Location: Segment comprises all of Beaverdam Creek.

Cause City/County: Goochland County; Louisa County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Beaverdam Creek was considered impaired of the Recreation Use goal during the 2004 cycle based on a fecal coliform violation rate of 4/21 at the first bridge downstream of Route 6 (2-BDC000.79).

During the 2008 cycle, additional monitoring was conducted and the impairment converted to E. coli. The exceedance rate was 6/22 at 2-BDC000.79 and 2/12 at the Route 639 bridge (2-BDC003.52) during the 2010 cycle.

The TMDL was completed as part of the James River and Tributaries - Lower Piedmont Region Bacterial TMDL which was approved by the EPA on 6/11/2008 and by the SWCB on 4/29/2009. The impairment is considered Category 4A.

Additional monitoring was conducted during the 2020 cycle at 2-BDC000.79; the exceedance rate was 3/11.

The new E. coli criteria were implemented in the 2022 cycle. No monitoring has been conducted.

James River Basin

Cause Group Code: **H38R-06-BAC** Courthouse Creek

Cause Location: Segment comprises all of Courthouse Creek from its headwaters to the confluence with Beaverdam Creek.

Cause City/County: Goochland County; Louisa County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Courthouse Creek was initially assessed as impaired of the Recreation Use in the 2006 cycle due to E. coli exceedances at the Route 634 bridge (2-CTS003.23.)

During the 2008 cycle, the exceedance rate was 3/22 at 2-CTS003.23 and 6/12 at station 2-CTS007.27, which is located at the Route 633 bridge.

The TMDL for Beaverdam Creek, to which Courthouse Creek flows, was completed as part of the James River and Tributaries - Lower Piedmont Region Bacterial TMDL. The TMDL was approved by the EPA on 6/11/2008 and by the SWCB on 4/28/2009. Because the Beaverdam Creek impairment requires a 100% reduction in anthropogenic direct sources, 99% reductions in agricultural, residential, and urban sources, and a 77% reduction in wildlife sources within the watershed, it is believed that the implementation will also address the Courthouse Creek impairment. The segment is considered nested (Category 4A).

James River Basin

Cause Group Code: **H39R-01-PH** **Broad Branch**

Cause Location: Broad Branch from its headwaters to the dam above Route 623.

Cause City/County: Goochland County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: In 2006, Broad Branch was assessed as not supporting the Aquatic Life Use due to three high pH exceedances in the summer of 2003 at 2-BOD003.31, which is located downstream of a pond draining a golf course.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-02-BAC** **Tuckahoe Creek and Major Tributaries**

Cause Location: Various streams within the Tuckahoe Creek watershed

Cause City/County: Goochland County; Henrico County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A; Fecal Coliform/4A

Cause Description: Tuckahoe Creek from Route 6 to its mouth at the James River was fully supporting but threatened of the Swimmable Use during the 1998 cycle due to fecal coliform exceedances at 2-TKO004.69. The creek was mistakenly included on Attachment A Part 1 of the Consent Decree.

In 2002, the portion of Tuckahoe Creek from the Route 6 bridge upstream to the confluence with Little Tuckahoe Creek, Little Tuckahoe Creek, and the upper portion of Deep Run were added to the impaired waters list. The TMDLs (13.75 total miles) were due by 2014.

Pre-TMDL monitoring in the watershed was conducted of the impaired- and previously threatened segments during the year 2004 cycle. Broad Branch was added as an impairment.

Tuckahoe Creek upstream of Little Tuckahoe Creek was impaired in the 2006 cycle based on monitoring at 2-TKO010.24.

During the 2008 cycle, several of the impairments converted to E. coli.

In the 2010 cycle, the exceedance rate at 2-TKO004.69 fell to 4/40; therefore, Tuckahoe Creek from Little Tuckahoe Creek downstream to its mouth was partially delisted (8.98 miles).

During the 2014 cycle, there was no additional monitoring conducted at Broad Branch; therefore, the fecal coliform impairment was carried over. E. coli monitoring confirmed the lower Deep Run impairment with an exceedance rate of 5/12 at 2-DPR001.00. Upper Deep Run remained impaired of the Recreation Use due to an E. coli violation rate of 4/10 at both stations 2-DPR002.46 and 2-DPR004.38 during the 2010 cycle; there had been no additional monitoring; therefore, the impairment is carried over. The exceedance rate on the upper portion of Tuckahoe Creek was 4/12 at 2-TKO010.64. Tuckahoe Creek from Little Tuckahoe Creek downstream to its mouth was relisted in the 2014 cycle based on an exceedance rate of 3/23 at 2-TKO004.69. Little Tuckahoe Creek remains impaired for E. coli with exceedances at 2-LIY001.73 and is assessed as Cat. 4A; the exceedance rate was 6/11 during the 2014 cycle.

The “Bacteria TMDL for Tuckahoe Creek, Little Tuckahoe Creek, Anderson, Broad, Georges, and Readers Branches, and Deep Run Henrico, Goochland, and Hanover Counties, Virginia” was approved by the EPA on 9/20/2004 and by the SWCB on 7/31/2008. The report allocates E. coli between nonpoint source, municipal (MS4) urban runoff, and a municipal discharger. The TMDL includes the entire watershed. All bacteria-impaired segments are assessed as Cat. 4A.

In the 2020 cycle, monitoring was conducted at 2-LIY001.73. Little Tuckahoe Creek remained impaired (7/11.) New bacteria criteria were implemented in the 2022 cycle. No additional monitoring was conducted in the 2022 cycle; however, the stream would remain impaired if the data were re-analyzed due to two or more STV hits in the same 90-day period with <10 samples.

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H39R-02-DO** **Tuckahoe Creek Watershed**

Cause Location: Various streams within the Tuckahoe Creek watershed

Cause City/County: Goochland County; Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/4C

Cause Description: There have been widespread dissolved oxygen exceedances on separate segments within the watershed.

The Tuckahoe Creek Natural Conditions Assessment report was completed in November 2005 to determine the source of the dissolved oxygen impairments. The report recommends delisting Deep Run and Little Tuckahoe Creek, reclassifying Tuckahoe Creek from Little Tuckahoe Creek to its mainstem as Class VII waters due to swamp conditions, and assessing multiple streams within the watershed as Category 4C waters due to natural low flow conditions. A portion of Tuckahoe Creek was delisted in the 2006 cycle due to acceptable dissolved oxygen exceedance rates.

Tuckahoe Creek was reclassified as Class VII swampwaters during the 2010 cycle.

Additional field data was collected in the 2016 cycle at 2-XUT000.62. The dissolved oxygen exceedance rate was acceptable (1/11); therefore, it was partially delisted. The Class VII portion of Tuckahoe Creek was delisted in the 2016 cycle. Per Virginia's Water Quality Standards (9VAC25-260-50), numeric dissolved oxygen standards only apply to Class VII waters when there is sufficient evidence the narrative criterion is not protective of aquatic life uses. To date, this Class VII water has not exhibited a need for a site-specific DO criterion, so the DO impairment has been removed.

The report attributes the low dissolved oxygen in Stony Run to natural low-flow conditions and recommends the segment be assessed as a Cat. 4C water. Additional monitoring was conducted at 2-SNJ000.19 in the 2016 cycle; however, there was insufficient data for assessment (1/9). One additional sample was collected at 2-SNJ001.41 (DO 0/1.) The exceedance rate was acceptable during the 2018 cycle (1/21 at 2-SNJ000.19); therefore, Stony Run was partially delisted.

James River Basin

Cause Group Code: **H39R-04-BAC** **Rattlesnake Creek**

Cause Location: The mainstem of Rattlesnake Creek from its headwaters to its mouth at the James River.

Cause City/County: Chesterfield County; Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2010 cycle, Rattlesnake Creek was assessed as not supporting of the Recreation Use due to an E. coli violation rate of 4/11 at station 2-RTL000.04, which is located at Riverside Drive.

The creek is within the study area for the James River and Tributaries - City of Richmond TMDL, which was approved by the EPA on 11/4/2010 and by the SWCB on 6/29/2012. Although the impairment was not specifically addressed, it will be included in the implementation phase of the TMDL and is therefore considered nested (Category 4A.)

In the 2020 cycle, monitoring at Alliance for the Chesapeake Bay station 2BRTL-RSC02-ACB confirmed the impairment.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-05-BEN** Powwhite Creek

Cause Location: Powwhite Creek from its headwaters to its mouth at the James River.

Cause City/County: Chesterfield County; Richmond

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: During the 2008 cycle, Powwhite Creek was assessed as not supporting of the Aquatic Life Use goal due to impairment of the benthic community at station 2-PWT001.97, which is a freshwater probabilistic monitoring station.

The station was replaced by 2-PWT001.23 because the location is a more appropriate stream type (non-swampy). Monitoring at 2-PWT001.23 in 2012-2013 also indicated impairment, as did 2016 monitoring at 2-PWT001.40.

James River Basin

Cause Group Code: **H39R-06-BAC** **Reedy Creek**

Cause Location: Segment comprises Reedy Creek from its headwaters to its mouth at the James River.

Cause City/County: Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Reedy Creek was initially listed as threatened of the Recreation Use during the year 1998 cycle due to fecal coliform exceedances. The segment was downgraded to impaired in the year 2002 assessment based on exceedances at Riverside Drive in the City of Richmond (2-RDD000.19). The impairment converted to E. coli in the 2006 cycle.

Additional E. coli monitoring was conducted in preparation for the TMDL. During the 2010 cycle, the segment remained impaired with the following violation rates: 2-RDD000.19 - 10/34 2-RDD000.99 - 5/12 2-RDD001.57 - 22/24 2-RDD002.61 - 5/12 2-RDD003.61 - 5/12

The Reedy Creek impairment was addressed in the James River and Tributaries - City of Richmond TMDL, which was approved by the EPA on 11/4/2010. The stream is considered Category 4A.

In addition, 2-RDD000.76 was impaired in the 2020 cycle (4/22.) The creek remains impaired during the 2022 cycle due to two or more STV exceedances in a 90-day period at stations 2-RDD-RC3-ACB, 2-RDD-RC4-ACB, and 2-RDD-J21-ACB, as well as geometric mean exceedances at 2-RDD-J21-ACB.

James River Basin

Cause Group Code: **H39R-06-PH** Reedy Creek

Cause Location: Reedy Creek from the tributary upstream of Roanoke Street downstream to Roanoke Street.

Cause City/County: Richmond

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: During the 2010 cycle, the portion of Reedy Creek around station 2-RDD000.99 was assessed as impaired of the Aquatic Life Use due to elevated pH levels.

The source of the pH impairment was considered unknown. However, the pH exceedances were 9.6 and 9.8 SU, which is substantially higher than at other stations on Reedy Creek and may be due to pooled water in the channelized stream.

The segment length was adjusted in the 2014 cycle to end at Roanoke Street because sampling at all other stations within Reedy Creek remain acceptable, including ACB station 2-RDD-RC1-ACB which is just downstream.

No additional pH data has been collected at 2-RDD000.99.

James River Basin

Cause Group Code: **H39R-08-BAC** **James River**

Cause Location: Segment begins at the Boulevard Bridge at river mile 113.20 and extends downstream to the fall line of the James River.

Cause City/County: Richmond

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River was initially assessed not supporting of the Recreation use support goal in 1998 based on the results of a summer special study in the fall zone. The special study was designed to monitor the effects of summertime rain and combined sewer overflow (CSO) events on water quality in the James River and to monitor the effects of Richmond's CSO abatement efforts. The special study data used representative conditions before completion of CSO abatement projects.

New bacteria criteria were implemented in the 2022 cycle. The segment remains impaired at stations 2-JMS110.37, 2-JMS111.17, and 2-JMS112.33 due to two or more STV hits in the same 90-day period with < 10 samples. There was insufficient information to assess several other stations.

The James River - City of Richmond Bacterial TMDL was approved by the EPA on 11/4/2010; therefore, the segment is considered Category 4A.

Cause Location: The south channel of the James River around Belle Isle.

Cause City/County: Richmond

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: In the 2012 cycle, the James River from the Boulevard Bridge downstream to the fall line was assessed as not supporting of the Aquatic Life Use because of low dissolved oxygen at 2-JMS111.48. The station is located on the south channel of the James River below the Canoe Run CSO outfall.

All other stations within the segment had acceptable exceedance rates. Therefore, the south channel was separated during the 2014 cycle. The impairment is limited to the south channel between the Belle Island Dam and the Brown's Island dam. The north channel was partially delisted.

The exceedance rate was 9/58 at 2-JMS111.48 during the 2020 cycle.

Cause Group Code: **H39R-10-BAC** **Bernards Creek**

Cause Location: The mainstem of Bernards Creek.

Cause City/County: Chesterfield County; Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Bernards Creek was initially assessed as impaired of the Recreation Use during the 2004 cycle based on fecal coliform exceedances at the Route 711 bridge (2-BOR001.73).

During the 2008 cycle, E. coli monitoring at 2-BOR001.73 was acceptable (1/11), however monitoring at the Route 607 bridge (2-BOR003.61) had an exceedance rate of 2/12 and the impairment was converted to E. coli.

In the 2014 cycle, exceedance rates were 4/27 at 2-BOR001.73 and 3/3 at downstream station 2-BOR000.02.

The TMDL was approved by the EPA on 11/4/2010. Bernards Creek is considered a Category 4A water.

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H39R-10-DO** **Bernards Creek**

Cause Location: The mainstem of Bernards Creek.

Cause City/County: Chesterfield County; Powhatan County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5A

Cause Description: During the 2014 cycle, Bernards Creek was impaired of the Aquatic Life Use due to dissolved oxygen exceedances at 2-BOR001.73, which is located at the Route 711 bridge. Monitoring near the mouth was acceptable (0/3 at 2-BOR000.02).

The exceedance rate was 4/27 during the 2016 cycle.

Upstream monitoring was conducted in 2020 at station 2-BOR003.61; the station was acceptable (0/9). The dissolved oxygen impairment will be carried over; however, additional monitoring is suggested.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-11-HG** **James River**

Cause Location: The James River from the rivermile 128.14 near the confluence with Norwood Creek downstream to the confluence with Tuckahoe Creek.

Cause City/County: Goochland County; Powhatan County

Use(s): Fish Consumption

Causes(s)/VA Category: Mercury in Fish Tissue/5A

Cause Description: The segment was assessed as not supporting of the Fish Consumption Use in the 2010 cycle due to mercury exceedances in redbreast sunfish and quillback carpsucker in 2003 and smallmouth bass in 2005. The monitoring occurred at station 2-JMS127.50, which is located at the end of Route 652 at Watkins Landing.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-12-BAC** Salles Creek

Cause Location: The mainstem of Salles Creek from its headwaters to its mouth at the James River.

Cause City/County: Chesterfield County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2010 cycle, Salles Creek was assessed as not supporting of the Recreation Use due to E. coli violations at station 2-SAL000.12, which is located at the Chesterfield County sewer line.

During the 2012 cycle, the violation rate was 9/22.

The creek is within the study area for the James River and Tributaries - City of Richmond TMDL, which was approved by the EPA on 11/4/2010. Although the impairment was not specifically addressed, it will be included in the implementation phase of the TMDL and is therefore considered nested (Category 4A.)

James River Basin

Cause Group Code: **H39R-13-BAC** **Genito Creek**

Cause Location: Genito Creek from its headwaters to its mouth at the James River.

Cause City/County: Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2008 cycle, Genito Creek was assessed as not supporting of the Recreation Use due to an E. coli violation rate of 2/10 at the Route 6 bridge (2-GEN000.69). The exceedance rate was 4/12 during the 2014 cycle.

Genito Creek is located within the study area for the James River - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/2010. Although the impairment was not specifically addressed, all bacterial impairments within the study area will be addressed during implementation; therefore, it is considered nested (Category 4A).

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **H39R-13-BEN** **Stony Run**

Cause Location: Stony Run from its headwaters to the extent of backwater at the pond.

Cause City/County: Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: During the 2008 cycle, upper Stony Run was assessed as impaired of the Aquatic Life Use due to impairment of the benthic community at 2-SNJ001.77 (downstream of Church Road). Additional sampling in 2012 and 2019 confirmed the impairment.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-15-BEN** **XYT - Stony Run, UT**

Cause Location: The unnamed tributary from its headwaters to its mouth at Stony Run.

Cause City/County: Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: During the 2008 cycle, the tributary was assessed as impaired of the Aquatic Life Use due to impairment of the benthic communities at stations 2-XYT000.04 and 2-XYT000.29, which were located downstream and upstream of the Barrington pipeline spill.

Station 2-XYT000.29 was re-sampled in the 2022 cycle and remained impaired.

James River Basin

Cause Group Code: **H39R-16-HG** **James River**

Cause Location: The tidal James River from the fall line near Mayos Bridge to river mile 108.76.

Cause City/County: Richmond

Use(s): Fish Consumption

Causes(s)/VA Category: Mercury in Fish Tissue/5A

Cause Description: During the 2010 cycle, the James River from the Boulevard Bridge to the fall line at approximately the railroad trestle above Mayos Bridge was assessed as not supporting of the Fish Consumption Use due to the following mercury exceedances:

2-JMS109.98 - 1 sp. in 2004 2-JMS110.00 - 3 sp. in 2003, 2 sp. in 2004, & 2 sp in 2006

The fall line has subsequently been determined to be slightly upstream of those locations. In the 2022 cycle, the impairment has been moved from riverine AUs VAP-H39R_JMS03A98 and -JMS03B14 to tidal AU VAP-G01E_JMS01A02. The upper segments are considered delisted.

James River Basin

Cause Group Code: **H39R-18-BAC** XHP - Tuckahoe Creek, UT

Cause Location: Headwaters to mouth at tributary XCZ

Cause City/County: Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Tributary XHP has been assessed as not supporting of the Recreation Use since the 2006 cycle based on E. coli exceedances at 2-XHP000.42.

The “Bacteria TMDL for Tuckahoe Creek, Little Tuckahoe Creek, Anderson, Broad, Georges, and Readers Branches, and Deep Run Henrico, Goochland, and Hanover Counties, Virginia” was approved by the EPA on 9/20/2004 and by the SWCB on 7/31/2008. The report allocates E. coli between nonpoint source and urban runoff. The allocation includes the entire watershed. The segment is considered nested (Category 4A).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-19-DO** **Deep Run**

Cause Location: Deep Run from the dam at river mile 1.47 to its mouth at Tuckahoe Creek.

Cause City/County: Henrico County

Use(s): Aquatic Life

Causes(s)/VA Category: Dissolved Oxygen/5C

Cause Description: Deep Run was impaired of the Aquatic Life Use during the 2012 cycle due to a dissolved oxygen exceedance rate of 2/12 at 2-DPR001.00, which is located at the Route 6 bridge.

Additional monitoring was conducted in the 2022 cycle. The stream remained impaired (2/11).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: **H39R-20-BAC** **Norwood Creek**

Cause Location: Norwood Creek from the confluence with Woodberry Pond to its mouth at the James River

Cause City/County: Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, Norwood Creek from Dutoy Creek to mouth was assessed as impaired of the Recreation Use due to an E. coli exceedance rate of 2/13 at 2-NWD002.27, which is located at Route 711. Monitoring at station 2-NWD005.84 was acceptable.

In the 2014 cycle, there were E. coli exceedances as well at station 2-NWD005.84 (3/12). The impairment was extended upstream to Woodberry Pond dam.

The stream is located within the study area for the James River - City of Richmond Bacterial TMDL, which was approved by the EPA on 11/4/2010. The impairment will be addressed during the implementation phase of the TMDL; therefore, it is considered nested (Category 4A.)

The stream was re-sampled in 2018; however, there is insufficient information to assess it using the new bacteria criteria.

Cause Location: Headwaters to the extent of backwater of Dover Lake

Cause City/County: Goochland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2020 cycle, upper Dover Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 4/12 at 2-DOV003.96, which is located at the Rt. 644 bridge.

Dover Creek is located within the study area for the James River - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/2010 and by the SWCB on 6/29/2012. Although the impairment was not specifically addressed, all bacterial impairments within the study area will be addressed during implementation; therefore, it is proposed for nesting (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring has been conducted. Although the 2020 data would have been considered insufficient information had the new criteria been in place at the time, the impairment will be carried over.

James River Basin

Cause Group Code: **H39R-31-BAC** **James River**

Cause Location: The James River from rivermile 130.14 downstream to the confluence with Tuckahoe Creek

Cause City/County: Goochland County; Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2020 cycle, the James River from rivermile 130.14 downstream to Tuckahoe Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 2/11 at 2-JMS127.50, which is located at Watkins Landing.

The segment is located within the study area for the James River - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/2010 and by the SWCB on 6/29/2012. Therefore, it is considered nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional monitoring was conducted. The 2020 data would have been insufficient for assessment if the criteria had been implemented at the time; however, the impairment will be carried over.

James River Basin

Cause Group Code: **H39R-32-BAC** **Roberts Branch**

Cause Location: Headwaters to mouth at Bernards Creek

Cause City/County: Chesterfield County; Powhatan County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2020 cycle, Roberts Branch was impaired of the Recreation Use due to an E. coli exceedance rate of 5/12 at 2-ROB000.31.

Roberts Branch is located within the Bernard Creek watershed in the James River - City of Richmond Bacterial TMDL which was approved by the EPA on 11/4/2010 and by the SWCB on 6/29/2012. Although the impairment was not specifically addressed, all bacterial impairments within the study area will be addressed during implementation; therefore, it is considered nested (Category 4A).

When the data is re-analyzed using the new bacteria criteria, which were implemented in the 2022 cycle, the stream remains impaired because there were 2 or more STV hits in the same 90-day period with < 10 samples.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

James River Basin

Cause Group Code: I04R-01-TEMP Falling Spring

Cause Location: Falling Spring Creek mainstem from its mouth to confluence of an unnamed tributary located at 37°52'48" / 79°54'52" (JU10).

Cause City/County: Alleghany County

Use(s): Aquatic Life

Causes(s)/VA Category: Temperature/4C

Cause Description: The 2018 data window finds the initial Aquatic Life Use listing for exceedances of the Class VI 20°C Natural Trout Waters criterion. The impairment is categorized '4C' (Impaired or threatened for one or more designated uses but does not require a TMDL because the water is a suspected swampwater awaiting applicable aquatic life criteria or because the impairment is determined to be caused by natural conditions. This category also includes impairments not caused by a pollutant) due to the influence from a thermal cave. Coldwater springs enter this stream which support the presence of trout further downstream.

2-FAS002.75 (Upstream of Hydro Diversion) - Three of eleven temperature observations exceed the Class VI Natural Trout Waters criterion within the 2018 data window. Excursions are: 20.8°C (8/13/15), 20.4°C (8/26/15), and 21.2°C (9/1/15).

2-FAS002.67 (Downstream of Hydro Diversion) - Three of eleven temperature observations exceed the Class VI Natural Trout Waters criterion within the 2018 data window. Excursions are: 20.8°C (8/13/15), 20.2°C (8/26/15), and 21.0°C (9/1/15).

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: The Jackson River General Standard - Benthic TMDL was approved on 7/21/10 (EPA) and 12/9/10 (SWCB). Federal IDs: 38981, 39001, 39017, 39022, 39003, 39004, 39002, 39005, 39006, 38996, 38997, 38995, 38998, 38999. The original 1996 VAW-I04R and VAW-I09R impairments were combined in 2002. The 1996/1998 originally 303(d) Listed impairments were 24.18 miles. Partial delist (Category 2C) of 9.81 miles from Karnes Creek mouth downstream to Cowpasture R and Jackson R confluence based on VSCI scores >60 at station 2-JKS006.67. 2007-10 VSCI scores from four surveys have an average (avg) of 64.10. Benthic trend analysis shows improving conditions at 2-JKS006.67 (+10 points) 1994-2010. Nutrient data and trends are detailed in previous cycle fact sheets but are not included here due to character limitations.

2-JKS023.61 (City Park, Gage) Bio 'IM' from 4 fall VSCI scores avg 37 (2015-17, 20) during the 2022 data window. The invertebrate community at this site has been dominated by taxa that are tolerant of environments with low dissolved oxygen and high levels of organic pollution (i.e. Tubificidae, Tricladida, Chironomidae, Lumbriculidae, and Simuliidae). The VSCI scores display a negative alteration in the taxonomic diversity and pollution sensitivity of the benthic community. The 2020 Integrated Report (IR) adds one 2017 VSCI Score of 39.2. 2018 IR finds 6 VSCI surveys (2011-16 Fall) averaging 34.3. The 2016 IR finds 6 VSCI surveys (2010-14) with an avg score of 32.8. Seven VSCI surveys (2007-08 & 2010-12) within the 2014 IR score an avg of 34.4. The 2012 IR reports an avg VSCI score of 35.95 from 5 surveys (2006-08, 2010). Seven VSCI surveys (2003-08) for 2010 have an avg score of 45.15. 2008 IR: 7 VSCI surveys (2001-06) with an avg score of 34.36.

2-JKS020.41 (Upper Horse Shoe at Rayon Terrace) 2007 probability station. Two VSCI surveys (2007), avg 48.13.

2-JKS018.68 (Rt. 18 Bridge) - 2022 IR: The 2 year average (2017 and 2020) VSCI score improved to a 65.0 which is above the impairment threshold. Fall 2017 VSCI score is 58.5. Fall 2015 and 2016 VSCI surveys within the 2018 IR result in an avg VSCI of 52.4. Five fall VSCI surveys (2010-14) within the 2016 IR avg 49.8. Six VSCI surveys (2007-08 & 2010-12) within the 2014 IR produce an avg score of 49.4. The 2012 IR finds (2006-08 & 2010) an avg score of 50.37 (5 surveys). Five VSCI surveys within the 2010 IR (2004, 2006-08) have an avg score of 54.28. The 2008 IR reports 2 VSCI scores from the fall of 2004 (67.3) and 2006 (51.8).

2-JKS013.29 (Lowmoor cave) - From 2015 to 2020 the VSCI scores were generally improving. Lower VSCI scores in 2016 are the result of the lower taxonomic diversity and lack of pollution sensitive taxa and increased Chironomidae. The 2 year average (2017 and 2020) VSCI score improved to a 64.8 which is above the impairment threshold. The VSCI avgs 57.7 including one additional Fall 2017 score (60.9) within the 2020 IR. The 2018 IR includes 5 Fall VSCI surveys (2012-16) averaging 56.8. The 2016 avg VSCI score is 56.6. Four surveys conducted in the fall (2010-14) scores range from 54.59 to 58.10. The 2014 IR reports 5 VSCI surveys (2007-08, 2010, 2012) with an avg of 53.1. The avg VSCI score within the 2012 IR (2006-08 & 2010) is 54.04. 2010 results also find impairment with the lowest at 38.6; fall 2004 and the highest 61.26; fall 2006 from 6 VSCI survey scores (2003, 2004, 2006-07). 2008 IR: 4 impaired VSCI surveys (2003-04, 2006). The Lowmoor station through the 2008 IR had lower scores and higher numbers of pollution tolerant organisms than 2-JKS018.68.

James River Basin

Cause Group Code: I09R-01-PCB Jackson River

Cause Location: The Jackson River from the Covington water intake downstream to just above the Lowmoor community.

Cause City/County: Alleghany County; Covington

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: The 2008 Integrated Report (IR) produces the initial 303(d) Listing of these waters for a total of 12.63 miles.

2-JKS023.88 (Covington City Park) 2005 fish tissue collections find exceedances above the former WQS based PCB TV of 54 ppb (VDH 50) from a single species. Two carp are found with tissue values of 66.4 (68.0 cm) and 71.3 ppb (61.31 cm). Application of the new WQS of 20 ppb adds three additional carp sizes (63.9 cm) exceeding at 28.81 ppb, (63.2 cm) at 35.96 and (51-58 cm) at 37.48 ppb. There are no additional data.

2-JKS023.61 (near Covington City Park at Gage) reports anecdotal data in support of the fish tissue impairment. The 2020 data window includes 2017 fish tissue collections where Carp exceeds the WQS based PCB TV of 20 ppb from a three fish composite (56.0-66.0 cm) at 28.553 ppb. In addition, one water column PCB sample exceeds the 640 pg/L criterion at 806.40 pg/L (9/17/18, wet weather).

James River Basin

Cause Group Code: I09R-02-BAC Jackson River

Cause Location: Jackson River mainstem from the Covington water intake downstream to just below the Lexington Avenue Bridge.

Cause City/County: Alleghany County; Covington

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: The original 3.38 mile waters were 1998 303(d) listed for fecal coliform (FC) bacteria and delisted for bacteria October 2005 as approved by the U.S. EPA (Fed. ID - NA) where only one exceedance from 24 observations are reported via the 2006 Integrated Report (IR) for escherichia coli (E. coli) bacteria.

The bacteria impairment returned with the 2008 Integrated Report (IR) based on E. coli excursions at 2-JKS023.61. Data within the 2010 data window results in an additional extension of the impairment from stations 2-JKS018.68 and 2-JKS015.60. The impairment extends a total of 12.63 miles.

2-JKS023.61 (Covington City Park) - The 2022 data window finds one Statistical Threshold Value (STV) exceedance (>410 CFU/100 mL) in one or multiple 90-day periods but insufficient data to analyze geomean from 6 excursions in 42 total samples. Seven of 43 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion during the 2020 data window. Seven of 35 E.coli samples exceed within the 2018 data window and fourteen of 36 E.coli observations exceed the WQS instantaneous criterion of 235 cfu/100 ml in 2016. The 2014 IR records 16 of 36 E.coli samples in excess of the instantaneous criterion. Seventeen of 37 E.coli samples exceed the instantaneous criterion within the 2012 data window. 2010 results produce nine of 33 E. coli observations in excess of the instantaneous criterion. 2008 IR found four of 27 E. coli observations in excess of the instantaneous criterion.

2-JKS018.68 (Rt. 8 Bridge at Covington) The 2022 data window finds E.coli impaired based on 2 or more STV hits in the same 90-day period with < 10 samples from 3 excursions out of 35 samples. E.coli exceeds the 235 cfu/100 ml in 10/36 samples (range: 259 to >3000 cfu/100 ml) collected during the 2020 data window. Nine of 36 E.coli samples exceed during the 2018 data window. Six of 24 E.coli samples exceed the instantaneous criterion within the 2016 data window. The 2014 data window finds E.coli exceeds 235 cfu/100 ml instantaneous criterion in seven of 24 samples. There are no additional E.coli data within the 2012 data window. Three of 12 E. coli observations exceed the instantaneous criterion in 2010.

2-JKS015.60 (K-Mart Parking Lot, SE corner) The 2022 data window finds one STV exceedance in one or multiple 90-day periods but insufficient data to analyze geomean based on two excursions out of 17 samples. The 2020 data window finds one of six E.coli samples in excess of the 235 cfu/100 ml instantaneous criterion at 10,462 cfu/100 ml (9/27/18). Prior to 2020, were no additional E.coli data within the 2012, 2014 or 2016 data windows. 2010 E. coli observations exceed the 235 cfu/100 ml criterion in two of 12 observations.

Cause Group Code: I09R-03-BAC Jackson River

Cause Location: Jackson River mainstem from the US 60 crossing downstream to the Jackson River confluence with the Cowpasture River.

Cause City/County: Alleghany County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: The 5.27 mile 2020 303(d) listing of the Jackson River is a result of Escherichia coli data in exceedance of the 235 cfu/100 ml Escherichia coli (E.coli) instantaneous criterion. This section was previously listed (2012 IR) and delisted (2014 IR).

2-JKS000.38 (Rt. 727 Bridge Iron Gate) - The 2022 data window finds insufficient information due to one Statistical Threshold Value (STV) exceedance in one or multiple 90-day periods but insufficient data to analyze geomean from 3 samples >410 cfu/100 ml out of 35 total samples. The 2020 data window finds E.coli impairment from six exceedances of the 235 cfu/100 ml criterion out of 36 total samples. Exceedances range from 246 to 933 cfu/100 ml.

Cause Location: Potts Creek mainstem from its confluence on the Jackson River upstream to an unnamed tributary draining Kimberlin Flat; PWS end (JU20).

Cause City/County: Alleghany County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: This initial 5.09 mile 2018 303(d) Listing is a result of escherichia coli (E.coli) samples in excess of the WQS 235 cfu/10 ml instantaneous criterion. The Recreational Use is not being met in this section of Potts Creek.

2-POT000.12 (Rt. 18 Bridge near Covington, VA) - The Recreation Use impairment carries during the 2022 data window. One STV exceedance in one or multiple 90-day periods but insufficient data to analyze geomean. Four of 34 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion during the 2020 data window. The 2018 data window finds excursions of the E.coli criterion in four of 36 samples. Exceedances range from 323 to greater than 1,000 cfu/100 ml.

James River Basin

Cause Group Code: **I17R-02-PH** North Branch Simpson Creek

Cause Location: North Branch Simpson Creek from the headwaters downstream to its confluence with Simpson Creek (JU36).

Cause City/County: Alleghany County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5C

Cause Description: The 3.93 mile extent of North Branch Simpson Creek is 303(d) listed for Aquatic Life Use during the 2022 cycle based on pH data collections. 2-SPO002.00 (Along North Br Trail) - the 2022 data window finds pH 'IM' from two of two excursions of the Class VI Natural Trout Waters pH 6.0 criterion at 4.8 (3/4/20) and 4.0 (6/1/20). Regional Biologist notes: The watershed is 100% national forest and used for hiking and hunting. The low pH (avg. 4.4) appears to be natural as the specific conductance is very low (avg. 12.0) due to low buffering capacity. Total habitat scores averaged 198 and are some of the highest recorded in BRRO.

James River Basin

Cause Group Code: **I19R-01-BAC** **Craig Creek**

Cause Location: Craig Creek mainstem from the mouth of Turnpike Creek extending downstream to the Rt. 311 crossing located downstream of the Abbott community.

Cause City/County: Craig County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The 2004 initial Listing basis is three of 27 fecal coliform (FC) samples exceeding the former 400 cfu/100 ml WQS instantaneous criterion. The maximum reported is 1100 cfu/100 ml with the remaining values at 900 and 500. These 2004 7.91 mile 303(d) Listed waters remain impaired for bacteria. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters.

2-CRG062.29- (Rt. 311 Bridge nearest New Castle) No new data since the 2018 data window where nine of 23 E.coli samples exceed the 235 cru/100 ml instantaneous criterion. Excursions range from 243 to 1050 cfu/100 ml. The 2014 data window produces seven of 24 escherichia coli (E.coli) samples exceeding the 235 cfu/100 ml WQS instantaneous criterion. The exceeding values range from 280 to 1050 cfu/100 ml. The 2010 and 2012 assessments find two of 12 Escherichia coli (E.coli) samples exceeding the current 235 cfu/100 ml WQS instantaneous criterion. E.coli exceeding values are 280 and 400 cfu/100 ml. Data within the 2006 and 2008 data windows find one FC excursion (1100 cfu/100 ml) of the former instantaneous criterion of 400 cfu/100 ml from 15 samples.

James River Basin

Cause Group Code: I22R-01-BAC Barbours Creek

Cause Location: Barbours Creek from just downstream of the Rt. 617 and 611 junction at the mouth of Valley Branch on downstream to its mouth on Craig Creek. (New Castle Quad).

Cause City/County: Craig County

Use(s): Recreation

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: The 7.15 mile bacteria impairment initially 303(d) Listed in 2004 remains. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters.

2-BAR000.60- (Rt. 614 Bridge) E.coli exceeds the 235 cfu/100 ml instantaneous criterion in two of 11 samples within the 2018 and 2020 data windows. Excursions are 359 cfu/100 ml and 368 cfu/100 ml. The 2004 IR reports the maximum fecal coliform (FC) of 1100 cfu/100 ml and a second at 500; both exceed the former WQS instantaneous criterion of 400 cfu/100 ml from 18 samples. The 2006 IR finds no excursions of the former WQS FC instantaneous criterion from nine samples. The 2008 data window finds no excursions of the aforementioned from 3 samples. There are no bacteria data within the 2010, 2012, 2014 or 2016 assessment data windows.

James River Basin

Cause Group Code: **I22R-01-TEMP** Barbours Creek

Cause Location: Barbours Creek from its mouth on Craig Creek upstream to the I23 Watershed Boundary located just downstream of the Rt. 617 and 611 junction at the mouth of Valley Branch.

Cause City/County: Craig County

Use(s): Aquatic Life

Causes(s)/VA Category: Temperature/5C

Cause Description: The original 7.15 mile temperature impairment continues with the 2014 Integrated Report (IR). The 2006 IR extended the impairment 6.29 miles (2-BAR010.10 - I23R) from the initial 2002 303(d) Listing (2-BAR000.60 - I22R). The 6.29 mile upstream extension is de-listed with the 2012 Integrated Report with station 2-BAR010.10 recording no exceeding Class VI temperatures of the 20°C WQS criterion from 15 observations.

2-BAR000.60- (Rt. 614 Bridge) There is no additional data during the 2020 data window; the 2022 data window adds one more excursion at 21°C (7/27/20). The 2018 data window finds two of 11 observations exceed the Class VI 20°C natural trout waters criterion at 21°C (6/15/15) and 21°C (8/10/15). Prior to the 2018 IR, there are no additional data beyond the 2004 IR. The 2004 assessment finds temperature exceeds the WQS 20°C natural trout water criterion in three of 18 observations with a maximum of 22°C on 7/10/00. Each of the remaining two temperature excursions occur on 7/08/98 (20.6°C) and 7/12/99 (20.5°C). The 2006 IR data window reveals one of nine temperature measurements in excess of the Class VI criterion. The 2008 data window finds no excursions from three measurements. There are no additional data within the 2016 assessment data window.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I22R-02-BAC** **Craig Creek**

Cause Location: Craig Creek from an unnamed tributary downstream of Abbott and the Rt. 311 crossing downstream to Barbours Creek confluence with Craig Creek.

Cause City/County: Craig County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The initial bacteria impairment on Craig Creek in this section was 303(d) listed in 2012. During the 2020 data window, the impairment is extended upstream based on data collection at station 2-CRG053.15. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters.

2-CRG053.15 (Rt 311 Bridge nearest New Castle) - The 2020 data window finds two of 12 samples in exceedance of the 235 cfu/100 ml instantaneous Escherichia coli (E.coli) criterion.

2-CRG048.53 (Below New Castle STP) - Data collection associated with this station ID was actually collected at the following two station locations as described below.

2ACRG049.51 (Rt. 616 Bridge above confluence with Johns Cr.) - There is no new data since E.coli exceedances were found in two of 12 samples within the 2018 data window. Values in excess of the 235 cfu/100 ml instantaneous criterion are 355 and 638 cfu/100 ml.

2ACRG048.20 (Off Rt. 615 below New Castle STP) - Note that this station was historically coded incorrectly as 2-CRG048.53. The 2012 initial 303(d) Listing results from E.coli exceedances from two of 12 samples within the 2012 data window. Values in excess of the 235 cfu/10 ml instantaneous criterion are 320 and 700 cfu/100 ml. A downstream station 2-CRG042.34 (Rt. 614 Bridge) records a single exceedance of greater than 2000 cfu/100 ml from 24 samples within the 2014 data window. The exceedance indicates potential for impairment although not impaired via Guidance.

James River Basin

Cause Group Code: I22R-03-BEN Crawford Branch

Cause Location: Crawford Branch mainstem from its headwaters downstream to its confluence with Craig Creek

Cause City/County: Botetourt County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4C

Cause Description: A Level 3 US Forest Service site 6570 located approximately 0.19 miles from the Crawford Branch mouth on Craig Creek finds the benthic community impaired. A single 1999 MAIS survey score is 11; rating Poor/Fair or moderately impaired; there are no additional data beyond the 2004 Integrated Report (IR). These data are outside the 2006, 2008, 2010, 2012 and 2014 assessment data windows. Comments provided by the US Forest Service recommends not listing this site as drought conditions produced results indicating impairment thus Category 4C.

James River Basin

Cause Group Code: I22R-04-BAC Little Patterson Creek

Cause Location: Little Patterson Creek from just upstream of the Rt. 684 (Sugar Tree Hollow Rd.) crossing downstream to its confluence with Patterson Creek.

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The 2004 Integrated Report (IR) initially 303(d) Lists the 4.24 mile fecal coliform (FC) bacteria impairment. Escherichia coli replaces the fecal coliform impairment with the 2012 IR. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters.

Station 2-LIP001.00 (Rt. 682 Bridge - Sugartree Hollow Rd.) There are no new data since the 2018 data window. Seven of 12 escherichia coli (E.coli) samples exceed the 235 cfu/100 ml instantaneous criterion within the 2018 data window. There are no additional data within the 2014 or 2016 data windows. Five of 12 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion within the 2012 data window. Exceeding values range from 250 to 1300 cfu/100 ml. The 2004 IR reports FC exceeds the former 400 cfu/100 ml WQS instantaneous criterion in two of nine samples. The two exceedances are 2800 (2001) and 2100 cfu/100 ml (2001). In both the 2006 and 2008 assessments FC exceeds in two of 12 samples with the same excursions as in previous cycles. No additional data extended into the 2010 data window where three observations did not exceed.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAW-I22R_LIP01A04 / Little Patterson Creek / Little Patterson Creek from just upstream of the Rt. 684 (Sugar Tree Hollow Rd.) crossing downstream to its confluence with Patterson Creek (JU49).	4A	Escherichia coli (E. coli)	2012	L	4.25

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I22R-05-BAC** Craig Creek

Cause Location: Craig Creek mainstem from the mouth of Wilson Branch downstream to the Craig Creek confluence with the James River.

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This 2016 303(d) initial Listing is due to impairment of the Recreational Use based on escherichia coli (E.coli) bacteria excursions of the WQS instantaneous criterion. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters.

2-CRG016.90 (Rt. 817 pull off from Rt. 615) No new data since the 2018 data window where three of 22 E.coli samples exceed the instantaneous criterion of 235 cfu/100 ml. Values in excess of the criterion range from 546 to greater than 2,000 cfu/100 ml. The 2016 Integrated Report (IR) finds two of 11 E.coli samples exceed the instantaneous criterion of 235 cfu/100 ml. Values in excess of the criterion are 546 and 650 cfu/100 ml.

2-CRG001.20 (Rt. 818 Bridge) The 2022 data window finds E.coli insufficient from one Statistical Threshold Value (STV) exceedance in one or multiple 90-day periods but insufficient data to analyze geomean based on 1 excursion of the 410 cfu/100 ml STV out of 32 samples. E.coli exceed the 235 cfu/100 ml instantaneous criterion in four of 35 and four of 23 samples within the 2020 and 2018 data windows, respectively. The 2016 data window reveals two of 11 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion. Values in excess of the criterion are 325 and 830 cfu/100 ml.

James River Basin

Cause Group Code: **I23R-01-PH** Cove Branch

Cause Location: Cove Branch mainstem from its confluence with Barbours Creek upstream to its headwaters (JU47).

Cause City/County: Craig County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/4C

Cause Description: This 2018 data window initial pH listing is based on data collection during at station 2-CVA002.15. The benthic macroinvertebrate community was sampled in order to validate initial 2008 data window findings by the U.S. Forest Service and results in a de-list for benthic macroinvertebrate communities within the 2018 data window. The pH measurements collected result in this 6.04 mile listing.

2-CVA002.15 (Cove Branch at Potts Arm Trail Crossing, Craig Co.) - There are no new data since the 2018 data window where four of four pH measurements are below the pH 6.0 SU water quality criterion. The excursions are 5.3 (5/25/16), 4.7 (11/2/16), 5.6 (4/1/2015), and 5.5 (10/27/2015).

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I24R-01-BAC** **Lapsley Run**

Cause Location: Lapsley Run from its confluence with the James River upstream to its headwaters.

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters. Lapsley Run was 303(d) listed in 2016 for the Recreational Use based on Escherichia coli (E.coli) data collection.

2-LAP001.20 (Rt. 726 Bridge) One E.coli sample collected during the 2022 data window finds E.coli insufficient due to no Statistical Threshold Value (STV) exceedances but insufficient data to analyze geometric mean. No new data since the 2016 Integrated Report (IR) which found six of 12 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion. Excessive values range from 275 to 1325 cfu/100 ml. There were no additional data within the 2010, 2012 or 2014 assessment cycles. E.coli exceed the WQS instantaneous criterion in three of nine samples within the 2008 data window. These excursions cause the 2008 initial 303(d) Listing of these waters for 9.01 miles. E.coli values in excess of the criterion are: 800, 420 and 250 cfu/100 ml.

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I25R-01-BAC** Catawba Creek

Cause Location: Catawba Creek from the confluence of Buchanan Branch downstream to the mouth on the James River (JU53) .

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters. Three Catawba Creek stations find nonsupporting fecal coliform (FC) bacteria results through the 2008 - 2012 data windows. In previous cycles two of the stations below (2-CAT000.34 & 2-CAT023.83) have sufficient escherichia coli (E.coli) data to assess. Escherichia coli (E.coli) replaces fecal coliform (FC) bacteria as the indicator as per Water Quality Standards [9 VAC 25-260-170. Bacteria; other waters]. This impaired segment is extended downstream to the mouth of Catawba Creek based on collections at 2-CAT000.34. The 2018 data window extended the E.coli impairment upstream 3.23 miles.

2014 E.coli data are sufficient to partially delist the lower portion of Catawba Creek from the Town of Fincastle POTW downstream to the confluence of Catawba Creek with the James River (11.71 miles). Station 2-CAT000.34 (Bridge near Salisbury Furnace) records two of 24 E.coli samples exceeding the WQS instantaneous criterion with a exceedance rate of 8.30%. The remaining waters exhibit impairment for the Recreational Use.

The original 2002 FC bacteria impairment was extended both upstream and downstream with the 2004 assessment. The extension downstream is from the Fincastle POTW to the Catawba Creek confluence with the James River (11.71 miles); now delisted. The upstream extension is from the confluence of Little Catawba Creek downstream to the Roanoke Cement outfalls on Catawba Creek (0.81 miles). The original 2002 11.87 mile impairment began at the Roanoke Cement Co. water intake on Catawba Creek (37°28'12"/80°00'18") extending downstream to the Town Branch confluence with Catawba Creek (37°31'01"/79°52'45").

2-CAT027.64 (Hogan Hollow Rd.) - The 2018 IR finds 13 of 17 Escherichia coli samples in excess of the 235 cfu/100 ml instantaneous criterion.

2-CAT023.83- (Rt. 779 Bridge near Gage) 2022 data window find E.coli insufficient. Nine E.coli samples exceed the 235 cfu/100 ml instantaneous criterion within the 2018 data window. There are no additional data within the 2016 data window where six of 12 E.coli remaining samples exceed the WQS instantaneous criterion of 235 cfu/100 ml. The 2014 assessment finds eight of 24 escherichia coli (E.coli) samples exceed the instantaneous criterion. Excursions range from 280 to 1950 cfu/100 ml. There are no additional data within the 2012 data window. 2010 data report two of 12 E.coli observations in excess of the 235 cfu/100 ml instantaneous criterion with data through 2008. Exceeding values are 280 and 480 cfu/100 ml. FC exceeds in four of 12 observations with additional data through May 2003 in 2008. Each excursion is in excess of the former WQS 400 cfu/100 ml instantaneous criterion. The maximum exceedance is 1900 cfu/100 ml and the minimum is 500 (2004 upstream extension). The 2006 Integrated Report (IR) finds FC exceeds in four of 12 observations. The maximum exceedance is 1900 cfu/100 ml and the minimum is 500. Exceedance range is the same as in 2004 where FC exceeds in three of nine observations.

2-CAT014.63- (Rt. 606 Bridge, Botetourt Co.) There are no additional E.coli data within the 2014 data window. The 2008 IR finds FC exceeds the former WQS criterion in four of 14 observations with additional data through May 2003. The 2006 IR reports FC exceeds in six of 20 observations. Exceedances range from 500 to the maximum of 1300 cfu/100 ml (original 2002 303(d) Listing). FC exceeds in seven of 27 observations ranging from 500 to the maximum of 2000 cfu/100 ml in 2004.

2-CAT000.34 (Bridge near Salisbury Furnace, Botetourt Co.) The 2020 assessment cycle finds two of 12 E.coli samples in exceedance of the 235 cfu/100 ml instantaneous criterion. Excursions are 345 (4/27/17) and 860 cfu/100 ml (10/31/17).

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: I25R-01-BEN Catawba Creek

Cause Location: Catawba Creek from Buchanan Branch downstream to the mouth of Little Catawba Creek (JU52).

Cause City/County: Botetourt County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: The impaired waters were partially delisted for 9.16 miles with the 2012 assessment; 3.23 miles remain impaired. The James River and Tributaries, Botetourt and Craig Counties Benthic (Sediment) TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Aquatic Life Use impaired waters.

These remaining waters were considered for delist with additional macroinvertebrate data collection. Both upstream (2-CAT028.98) and downstream (2-CAT025.14) sites indicate non-impaired conditions. Additional sites were sampled (2-CAT026.29 & 2-CAT027.64) within the 2018 data window indicating Aquatic Life Use impairment. A Total Maximum Daily Load study was initiated in 2017 to address the Recreational and Aquatic Life Use impairments.

2-CAT027.64 (Hogan Hollow Rd. (Rt. 737) Botetourt, Co.) Bio 'IM' from 2 2017 VSCI scores: 64.3 (Spring) and 53.4 (Fall); and two 2016 VSCI scores: Spring 54.4, Fall 61.3. Two 2016 VSCI surveys (Spring 54.4, Fall 61.3) average 57.9 and indicate Aquatic Life Use impairment within the 2018 data window. Both the riparian zone and the banks are impacted by livestock. The limestone geology increases productivity of algae, macroinvertebrates and fish.

2-CAT026.55 (Off Rt. 779 North of Catawba) There are no additional data beyond the 2008 Integrated Report (IR). This 2008 initial 303(d) Listing for General Standard (Benthic) impairment is based on two 2003 Virginia Stream Condition Index (VSCI) surveys scoring spring 36.4 and fall 56.9. More taxa, including a higher percentage of mayflies were collected in the fall sample. Also, fewer midge larvae (Chironomidae) were present in the fall sample helping to improve the benthic community score. The land use adjacent to and immediately upstream of the station is open pasture. The riparian zone is impacted by the pastures and bank erosion due to cattle access as well as poor bank vegetative protection.

2-CAT026.29 (Off Rt. 779 upstream of Haymaker Br) This station was established as part of the 2016 Probabilistic monitoring network. The 2018 data window finds Aquatic Life use impaired from two 2016 VSCI scores: Spring 57.7, Fall 55.5. The average Stream Condition Index (SCI) score at this station was 56.59. The benthic assemblage in this reach of Catawba Creek has a mix of macroinvertebrates that are both tolerant and sensitive to pollution but is dominated by tolerant taxa.

James River Basin

Cause Group Code: I25R-02-BAC Haymaker Branch

Cause Location: Haymaker Branch mainstem from its confluence with Catawba Creek upstream to its headwaters. This drainage lies wholly within the WQS public water supply (PWS) designation (JU52).

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The 2020 data window finds the initial Recreational Use listing for Haymaker Branch. The James River and Tributaries, Botetourt and Craig Counties Bacteria TMDL is EPA approved 7/12/19 and SWCB approved 6/27/19 and addresses these Recreational Use impaired waters (NESTED 2022 cycle).

2-HAM000.37 (Along Rhodes Ln. [Rt. 663]) - The 2022 data window adds a datapoint and applies the new E.coli criterion to find impairment due to 2 or more Statistical Threshold Value (STV) hits in the same 90-day period with < 10 samples. The 2020 data window finds five of 38 E.coli samples in exceedance of the 235 cfu/100 ml instantaneous criterion. The minimum excursion is 488 cfu/100 ml and the maximum is 1,722 cfu/100 ml.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Virginia Department of Environmental Quality

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: I26R-01-BAC Looney Creek Drainage

Cause Location: The Looney Creek portion of the overall impairment begins at the confluence of Mill and Back Creek (37.498181 / -79.727131) on Looney Creek northeast of Lithia, Virginia, (Montvale Quad) at river mile 2.48. The original 1998 impairment (2.48 miles) ends at the mouth of Looney Creek on the James River. Note: Bacteria collections on Mill Creek (8.29 miles) and Ellis Run (1.60 miles) cause expansion of the original 1998 impairment to include portions of the aforementioned creeks for a total of 12.37 miles. The TMDL Study encompassed these additional drainages and are described in a separate Fact Sheet (I26R-02-BAC).

Cause City/County: Botetourt County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Looney Creek Bacteria TMDL Load Duration Study is U.S. EPA approved on 06/21/04 [Fed ID: 20103] and SWCB approved 12/02/04 (formerly VAW-I26R-01). The TMDL Implementation Plan is SWCB approved 4/28/09. Fecal coliform (FC) bacteria exceedances cause the original 1998 2.66 mile Recreational Use impairment in Looney Creek.

2-LMC000.40 (Rt. 625 Bridge) The 2022 data window finds E.coli Insufficient from one STV exceedance in one or multiple 90-day periods; insufficient data to analyze geomean. The 2020 and 2018 data windows find seven of 36 and ten of 36 E.coli samples exceeding the 235 cfu/100 ml instantaneous criterion, respectively. Nine of 36 escherichia coli (E.coli) observations exceed the instantaneous criterion within the 2016 data window. Values in excess of the criterion exhibit the same range of excursions as found in 2014. The 2014 data window produces eight of 24 E.coli samples exceed the Water Quality Standards (WQS) 235 cfu/100 ml instantaneous criterion. Values in excess of the criterion range from 450 to greater than 2000 cfu/100 ml. Additional data within the 2012 data window find nine of 24 E.coli samples exceeding the WQS instantaneous criterion. Values in excess of the criterion range from 250 to 1400 cfu/100 ml. The 2010 Integrated Report (IR) finds 13 of 31 E.coli samples exceed the instantaneous criterion. Exceeding values range from 250 to 570 cfu/100 ml. The 2008 IR reports 13 of 33 samples exceed the instantaneous criterion. And in 2006 seven of 19 E.coli samples exceed the instantaneous criterion with the same range of exceedance as 2008 and 2010.

In conducting the TMDL Study two tributary streams within the watershed find the Recreational Use impaired for bacteria (E.coli) as well (2004 Assessment-fecal coliform). Nested bacteria impairments on Ellis Run and Mill Creek are described in a separate fact sheet (I26R-02-BAC).

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I26R-01-BEN** Mill Creek, UT (XUL)

Cause Location: Mill Creek, UT (XUL) from just downstream of the Rt. 11 crossing upstream to its headwaters.

Cause City/County: Botetourt County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: The 2010 data window finds the initial 303(d) listing on the Unnamed Tributary to Mill Creek (XUL) from benthic macroinvertebrate community data collected in 2008.

2-XUL001.67 (Downstream of Rt. 799 (Ammen Rd.) crossing)- No additional data within the 2020 or 2022 data windows. The 2016 and 2018 data windows include more recent VSCI surveys (2013-2014) with an average score of 55.2. This additional data results in an assessment of 'Reserve Judgement' until additional data can be collected. There are no additional information beyond the 2010 Integrated Report (IR). The benthic community is impaired for 5.37 miles from two 2008 Virginia Stream Condition Index (VSCI) surveys. 2008 VSCI scores are spring 33.9 and fall 50.9. This is a small second order tributary to Mill Creek. The average VSCI score for all samples was 42.4 indicating a benthic community with many organisms that are tolerant of pollution. Habitat scores indicate a stream reach with badly eroded stream banks, poor vegetative protection on the banks and in the riparian zone excessive deposits of sand and fine sediment on the stream bottom. The watershed consists of pastures, crop fields, and some residential areas.

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The Looney Creek Bacteria TMDL Load Duration Study is U.S. EPA approved on 06/21/04 [Fed ID: 20103] and SWCB approval on 12/02/04 (formerly VAW-I26R-01). The TMDL Implementation Plan received SWCB approval 4/28/2009. Fecal coliform (FC) bacteria exceedances cause the original 1998 2.48 mile recreational use impairment in Looney Creek. Additional sample collection associated with TMDL development finds recreational impairment on Ellis Run and Mill Creeks. These bacteria impairments were not specifically addressed by the approved TMDL but are nested within the overall TMDL Watershed. Allocation scenario development is for the entire drainage to provide pollutant reductions for all watersheds contributing to the bacteria impairment. The entirety of the approved TMDL and allocations can be viewed at <http://www.deq.virginia.gov>.

Ellis Run (1.69 miles) and Mill Creek (8.89 miles), tributaries to Back Creek and Looney Creek, originally listed in 2004 for fecal coliform (FC) bacteria remain impaired for the Recreational Use with escherichia coli (E.coli) replacing fecal coliform.

2-ELS000.08- (Rt. 643 Bridge) No new data since five of 18 E.coli samples exceeded the instantaneous criterion within the 2018 data window. The 2016 Integrated Report (IR) finds three of 12 escherichia coli (E.coli) samples exceed the instantaneous criterion. Excessive values range from 265 to greater than 2000 cfu/100 ml. There are no additional data within the 2014 data widow. There are no additional data within the 2012 data window where one of three E.coli samples exceed at 450 cfu/100 ml. Nine of 12 E.coli samples exceed the WQS 235 cfu/100 ml instantaneous criterion. Values in excess of the criterion range from 250 to greater than 2000 cfu/100 ml within the 2010 data window. The 2008 IR reveals 14 of 18 E.coli samples exceeding the instantaneous criterion. Values in excess of the criterion range from 250 to greater than 2000 cfu/100 ml. In 2006 13 of 15 E.coli samples exceed the instantaneous criterion with the same range of exceeding values. Five of six E.coli samples exceed the criterion ranging from 350 to >800 cfu/100 ml in 2004.

2-MIA000.79- (Junction of Routes 11 & 722) No additional data since the 2018 data window where three of 18 E.coli samples exceed the 235 cfu/100 ml instantaneous criterion. The 2016 IR finds one of 12 E.coli samples in excess of the instantaneous criterion at greater than 2000 cfu/100 ml. The Recreational Use remains impaired due to the magnitude of the single observation in excess of the WQS instantaneous criterion of 235 cfu/100 ml. There were no additional data within the data windows for 2010, 2012 or 2014 IRs. The 2008 IR finds eight of 18 E.coli samples in excess of the instantaneous criterion. Excursions range from 450 cfu/100 ml to 1700. In 2006 E.coli exceeds the instantaneous criterion in seven of 16 samples. Values in excess of the criterion ranged from 300 to 700 cfu/100 ml. The 2004 IR reports two of six E.coli samples exceed the instantaneous criterion at 470 and 700 cfu/100 ml.

James River Basin

Cause Group Code: **I27R-01-BAC James River**

Cause Location: James River from the Looney Cr. mouth downstream to the confluence Cedar Creek (JU58).

Cause City/County: Botetourt County; Rockbridge County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/5A

Cause Description: This initial 7.15 mile 2014 303(d) Listing is a result of escherichia coli (E.coli) samples in excess of the WQS 235 cfu/10 ml instantaneous criterion. The Recreational impairment is extended downstream 9.53 miles with the 2016 Integrated Report (IR). There is no additional data collected at the following stations since the 2016 IR window.

2-JMS309.13 (Gage - Foot Bridge Buchanan) Six of 24 E.coli samples exceed the 235 cfu/100 ml WQS instantaneous criterion within the 2016 data window. Excessive values range from 600 to 1800 cfu/100 ml. The 2014 Integrated Report (IR) finds three E.coli samples exceed the instantaneous criterion from 24 samples. Values in excess of the instantaneous criterion are 600, 1000 and 1475 cfu/100 ml.

2-JMS298.17 (Pull off of Rt. 608) No additional data beyond the 2016 IR where two of 12 E.coli samples in excess of the WQS instantaneous criterion. Excessive values are 265 and 275 cfu/100 ml.

James River Basin

Cause Group Code: **I27R-02-PCB James River**

Cause Location: James River mainstem near Iron Gate (at the confluence of Jackson River and Cowpasture River) downstream to Balcony Falls Dam (historically located at 37.623, -79.444) near the Maury River.

Cause City/County: Botetourt County; Rockbridge County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: The 2022 data window extends the James River PCB in fish tissue impairment from the initial 2020 data window 303(d) Impaired Waters Listing based on fish tissue data collection and a 2020 VDH fish consumption advisory. The initial 2020 fish tissue listing included a 9.52 mile segment of the James River (from the Jennings Creek mouth downstream to its confluence with Cedar Creek) and was based on data collected in 2017. The updated fish tissue 303(d) Impaired Waters listing is 59.3 miles in length and extends the listing both upstream and downstream from the initial 2020 303(d) listing.

2020 VDH Fish Consumption Advisory for Upper James River from the head of the James near Iron Gate (at the confluence of Jackson River and Cowpasture River) to Balcony Falls Dam downstream of Glasgow (near the Maury River); Carp: no more than 2 meals / month.

2-JMS345.73 (Route 220- 1st Bridge below Cowpasture) - 2019 one species analyzed for PCB - Carp exceeds DEQ's screening value of 18 ppb; (3 fish composite [70.7-81.7 cm]) at 39.75 ppb, (3 fish composite [75.7-90.1 cm]) at 61.60 ppb, (3 fish composite [85.0-90.2 cm]) at 191.10 ppb, and (3 fish composite [76.8-81.9 cm]) at 62.80 ppb. One of the collection species (Carp) exceeds the VDH "Lower" level of concern of 100ppb.

2-JMS298.70 (near Alpine Landing above Natural Bridge Station) - No new data since 2020 cycle. The 2020 data window finds PCB in fish tissue impaired from 2017 collections. Three species analyzed for PCB: Carp exceeds WQS TV of 20 ppb and VDH "lower" level of concern of 100 ppb; (3 fish composite [74.6-80.0 cm]) at 101.805 ppb and Carp (3 fish composite [77.3-79.5 cm]) at 170.358 ppb. Flathead Catfish exceeds WQS TV of 20 ppb; (1 fish [96 cm]) at 32.705 ppb (Remaining species analyzed Smallmouth Bass (6 fish composite [32.3-41.2 cm]) at 0.00 ppb).

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: **I38L-01-PH** **Lexington Reservoir**

Cause Location: Lexington Reservoir

Cause City/County: Rockbridge County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/5A

Cause Description: The lake is impaired due to excursions of the pH WQS at 2-MOR003.60 (18 excursions of 66 samples for pH in 2014, no new data in 2022).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-I38L_MOR01A10 / Lexington Reservoir / Lexington Reservoir	5A	pH	2010	L	22.6

Lexington Reservoir

Aquatic Life

	Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
pH - Total Impaired Size by Water Type:		22.6	

Sources: Atmospheric Deposition - Acidity; Natural Sources

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: I38R-01-BAC Buffalo Creek

Cause Location: Buffalo Creek from its confluence with North/South Fork Buffalo Creek downstream to its confluence with the Maury River. (Start Mile: 16.10 End Mile: 0.00 Total Impaired Size: 16.10 Miles)

Cause City/County: Rockbridge County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli bacteria WQS at stations: 2-BLD000.22 (2022 cycle, new WQS: 4 exceedances of 22 sample periods: 2 or more STV hits in the same 90-day period with < 10 samples) , 2-BLD004.25 (2014 cycle- 2 exceedances of 12 samples for e-coli), and 2-BLD011.90 (2020 cycle- 2 exceedances of 36 samples for e-coli). Initial Listing Date: 2004. This impairment is included in the EPA Approved Buffalo Creek Bacteria TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-I38R_BLD01A00 / Buffalo Creek / Buffalo Creek from its confluence with an unnamed tributary near Buffalo Bend downstream to its confluence with the Maury River.	4A	Escherichia coli (E. coli)	2008	L	3.96
VAV-I38R_BLD02A04 / Buffalo Creek / Buffalo Creek from its confluence with Colliers Creek downstream to its confluence with an unnamed tributary near Buffalo Bend.	4A	Escherichia coli (E. coli)	2010	L	9.14
VAV-I38R_BLD03A10 / Buffalo Creek / Buffalo Creek from its confluence with South/North Fork Buffalo Creek downstream to its confluence with Colliers Creek.	4A	Escherichia coli (E. coli)	2010	L	2.99

Buffalo Creek

Recreation

Escherichia coli (E. coli) - Total Impaired Size by Water Type:	Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
			16.09

Sources: Agriculture; Non-Point Source; On-site Treatment Systems (Septic Systems and Similar Decentralized Systems); Wildlife Other than Waterfowl

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: I38R-02-BAC Colliers Creek

Cause Location: Colliers Creek from the headwaters downstream to its confluence with Buffalo Creek. (Start Mile: 15.11 End Mile: 0.00 Total Impaired Size: 15.11 Miles)

Cause City/County: Rockbridge County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the E.coli WQS at station: 2-CLL001.99 (2022 cycle, new WQS: 5 STV exceedances of 24 sampling periods- Impaired- 2 or more STV hits in the same 90-day period with < 10 samples). Initial Listing Date: 2006. This segment is included in the EPA Approved Colliers Creek Bacteria TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-I38R_CLL01A00 / Colliers Creek / Colliers Creek and headwater tributaries from the headwaters downstream to its confluence with Buffalo Creek.	4A	Escherichia coli (E. coli)	2010	L	15.11

Colliers Creek

Recreation

	Estuary (Sq. Miles)	Reservoir (Acres)	River (Miles)
Escherichia coli (E. coli) - Total Impaired Size by Water Type:			15.11

Sources: Agriculture; Non-Point Source; On-site Treatment Systems (Septic Systems and Similar Decentralized Systems); Wildlife Other than Waterfowl

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: I38R-03-BAC South Fork Buffalo Creek

Cause Location: South Fork Buffalo Creek from the headwaters downstream to its confluence with Buffalo Creek.
 (Start Mile: 14.48 End Mile: 0.00 Total Impaired Size: 14.48 Miles)

Cause City/County: Botetourt County; Rockbridge County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli WQS at station: 2022 cycle- 2-BSF000.15: New WQS: 2 or more STV exceedances in the same 90-day period with < 10 samples; 2018 cycle- 2-SBF-8-NBM (2 exceedances of 12 samples for e-coli - Level II data) and 2-SBF-9-NBM (4 exceedances of 12 samples for e-coli - Level II data). Initial Listing Date: 2010. This impairment is included in the EPA Approved South Fork Buffalo Creek Bacteria TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-I38R_SBF01A00 / Buffalo Creek South Fork / South Fork Buffalo Creek from the headwaters downstream to its confluence with Buffalo Creek.	4A	Escherichia coli (E. coli)	2010	L	14.48

South Fork Buffalo Creek

Recreation

Estuary (Sq. Miles) Reservoir (Acres) River (Miles)
 Escherichia coli (E. coli) - Total Impaired Size by Water Type: 14.48

Sources: Agriculture; Non-Point Source; On-site Treatment Systems (Septic Systems and Similar Decentralized Systems); Wildlife Other than Waterfowl

Impaired (Category 4 or 5) Waters in 2022

James River Basin

Cause Group Code: J01R-01-BAC Appomattox River

Cause Location: Appomattox River from the Suanee Creek confluence to the Deep Creek confluence.

Cause City/County: Amelia County; Appomattox County; Buckingham County; Chesterfield County; Cumberland County; Powhatan County; Prince Edward County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A; Fecal Coliform/4A

Cause Description: The segment remained impaired for E.coli.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-J01R_APP02A02 / Appomattox River / Appomattox River from Fishpond Creek to Vaughans Creek (JA03)	4A	Escherichia coli (E. coli)	2006	L	12.09
VAP-J01R_APP03A02 / Appomattox River / Appomattox River from Vaughans Creek to a point 5 miles upstream of Farmville's raw water intake.	4A	Escherichia coli (E. coli)	2006	L	6.83
VAP-J01R_APP04A02 / Appomattox River / Appomattox River from Farmville's raw water intake to a point 5 miles upstream	4A	Escherichia coli (E. coli)	2006	L	5.01
VAP-J01R_APP05A04 / Appomattox River / Farmville's raw water intake downstream to JA05/JA09 watershed boundary	4A	Escherichia coli (E. coli)	2006	L	2.66
VAP-J01R_APP05B14 / Appomattox River / Appomattox River from the JA05/JA09 watershed boundary to the confluence with Sandy River	4A	Escherichia coli (E. coli)	2014	L	6.56
VAP-J06R_APP05A02 / Appomattox River / The portion of the Appomattox River within J06.	4A	Escherichia coli (E. coli)	2006	L	21.06
