

# PCB Cleanup Study For the James, Maury, and Jackson Rivers

## Final Public Meeting

---

Mark Richards

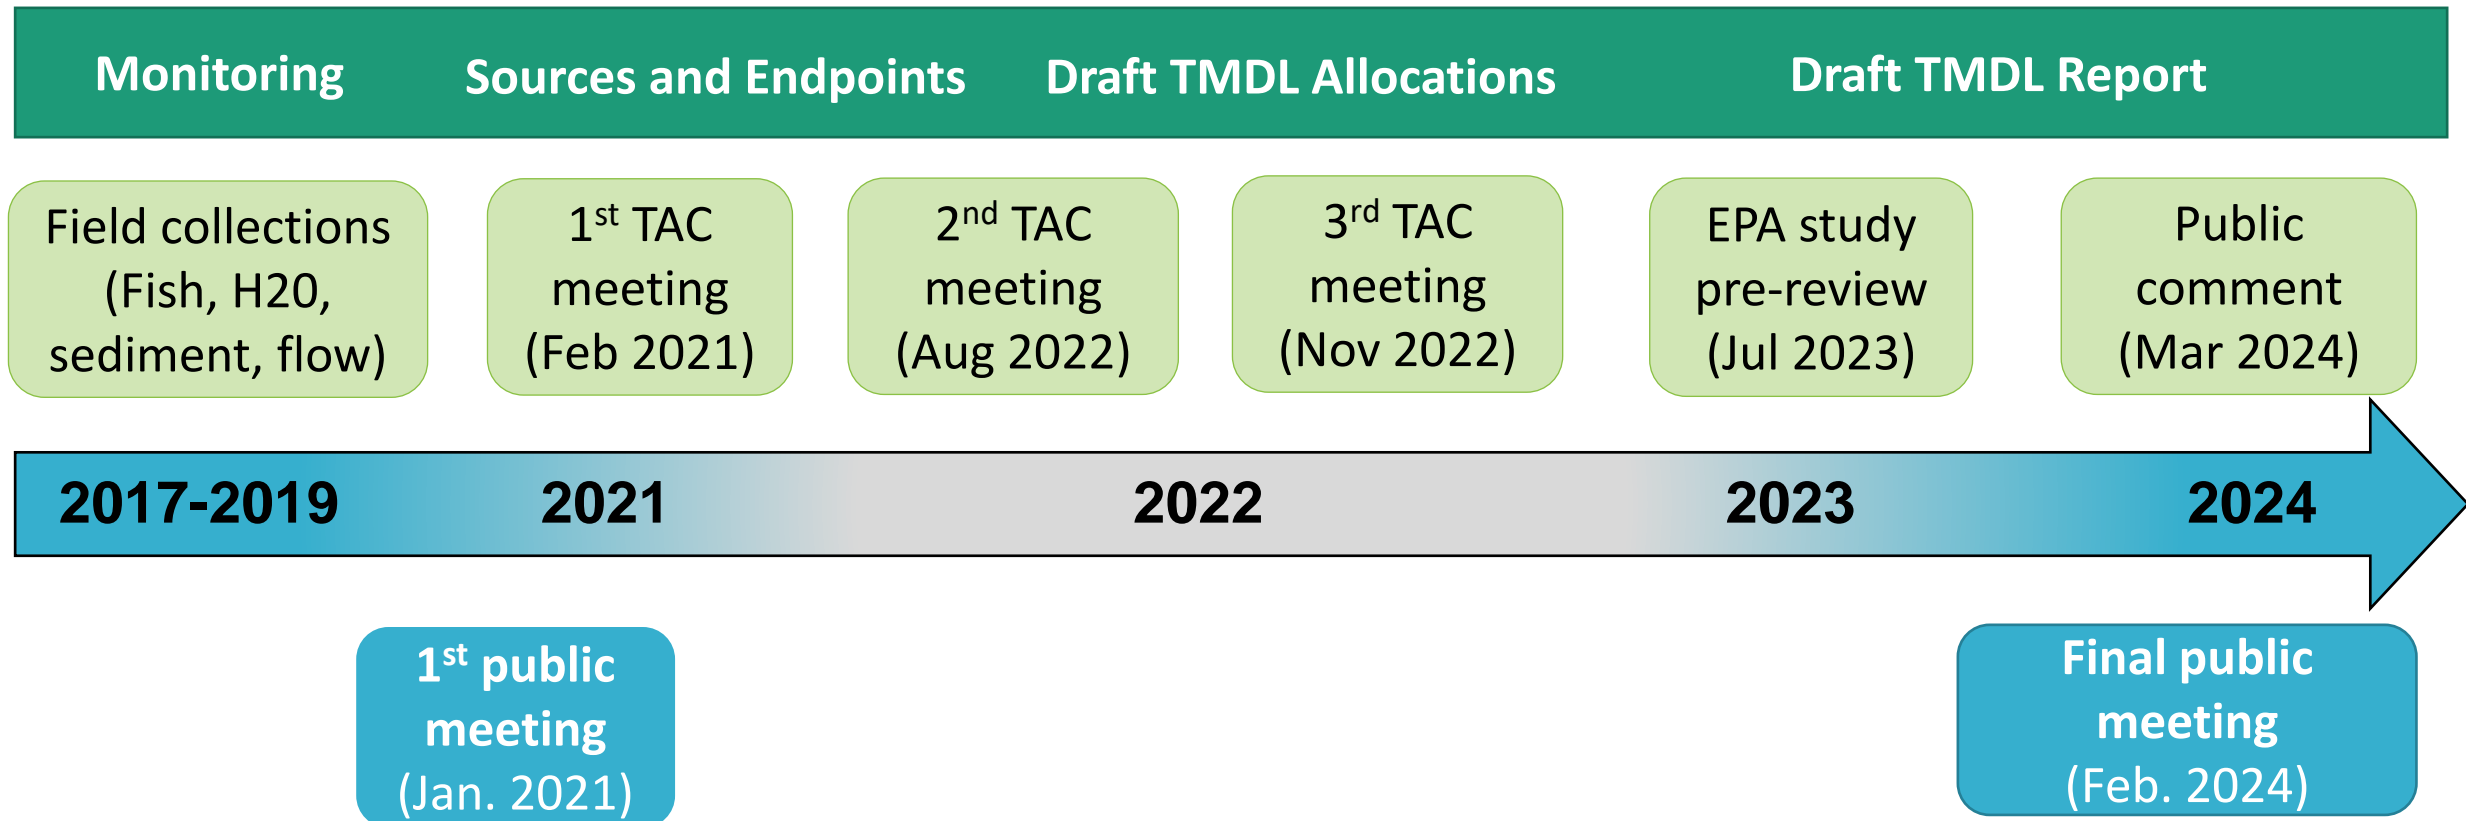

Watersheds Program Team Lead

Virginia Department of Environmental Quality

February 15, 2024

# TMDL Study Timeline

# Background: PCBs

- Biphenyl molecule (1-10 chlorine atoms)
- 209 distinct PCB Compounds
- Regulated by DEQ as Total PCB (tPCB) = 209 compounds summed
- Referred to as PCB Aroclors (Monsanto tradename) = mixture of PCB compounds

# Background: PCBs

- Over 1.5 billion lbs. manufactured in the U.S. until 1977
- Legacy contaminant
- Very stable, heat resistant, persistent in the environment
- Common uses: transformers, circuit breakers, PVC products, caulking material, paints, etc.

# Toxics Substances Control Act

- 1976 law regulates PCBs
  - Bans manufacture, processing, use and distribution
  - Non-PCB Transformer defined as containing  $< 50$  ppm PCB
  - Inadvertent manufacture of PCBs – products up to 50 ppm allowed to leave site as long as annual average is  $< 25$  ppm
    - **Unintentional** by-products of manufacturing processes

50 ppm  
compared to  
0.00000058 ppm  
Water Quality  
Criteria

# Virginia's Water Quality Criterion – Total PCBs

Agency	Fish Tissue Threshold (ppb)	WQC (pg/l)
VDH	100 (Fish Consumption Advisory)	--
DEQ	18 (Tissue Value)	*580 <small>*Applied on a long-term average</small>

- DEQ's Water Quality Assessment (Integrated Report)
  - VDH - Consumption Advisory = impairment
  - DEQ - two or more fish samples exceed screening value at a site or two water samples exceed criterion at a site = impairment

*From: DEQ's 2024 Water Quality Assessment Guidance Manual*

# Virginia's PCB Water Quality Criterion =

Concentration of PCBs in the water that is low enough to ensure that fish are safe to eat

580 pg/L

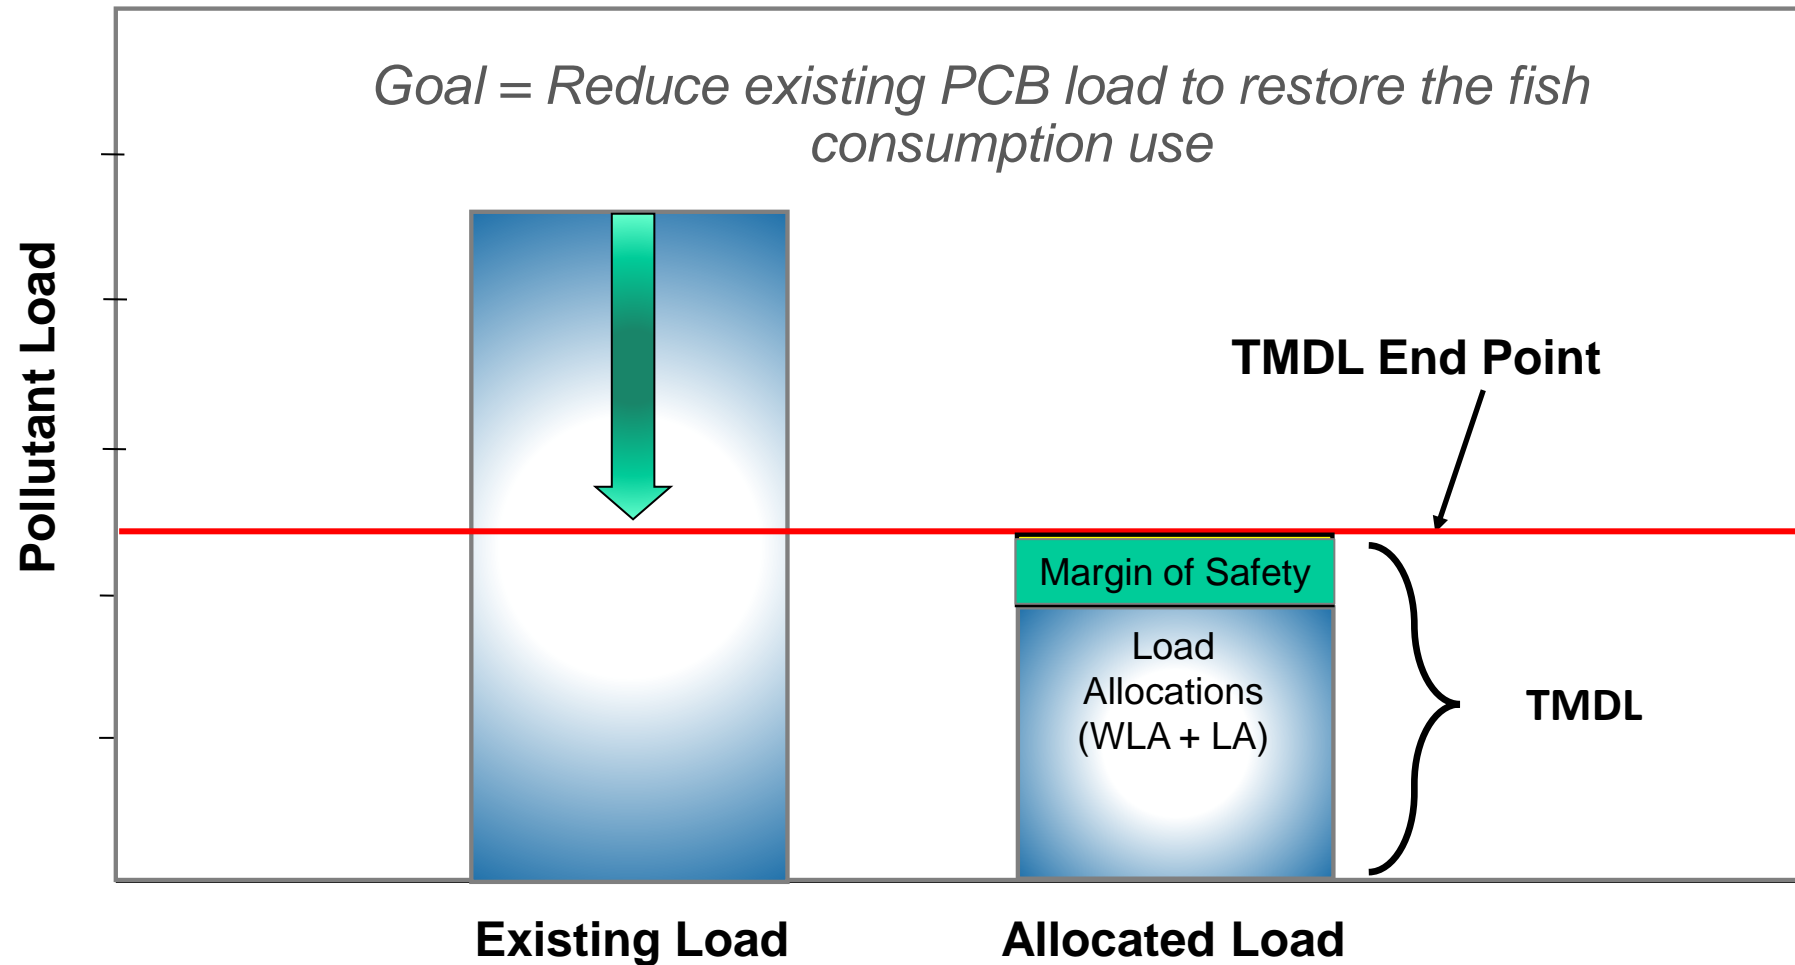

One drop in 33  
Olympic-sized  
swimming pools

# Total Maximum Daily Load (TMDL)

For restoration the waterbody must meet two thresholds: 1) Numeric WQC or site-specific value and 2) fish tissue threshold.

# Why PCBs Continue to be an Issue

- Human health concern
  - Fish consumption significant exposure pathway
  - Suspected carcinogen
  - Immunotoxicity, hepatotoxicity (liver)
  - Affects reproduction and development
- Persistent, bioaccumulates at a low conc. (pg/L) & biomagnifies
- Confirmed on-going releases

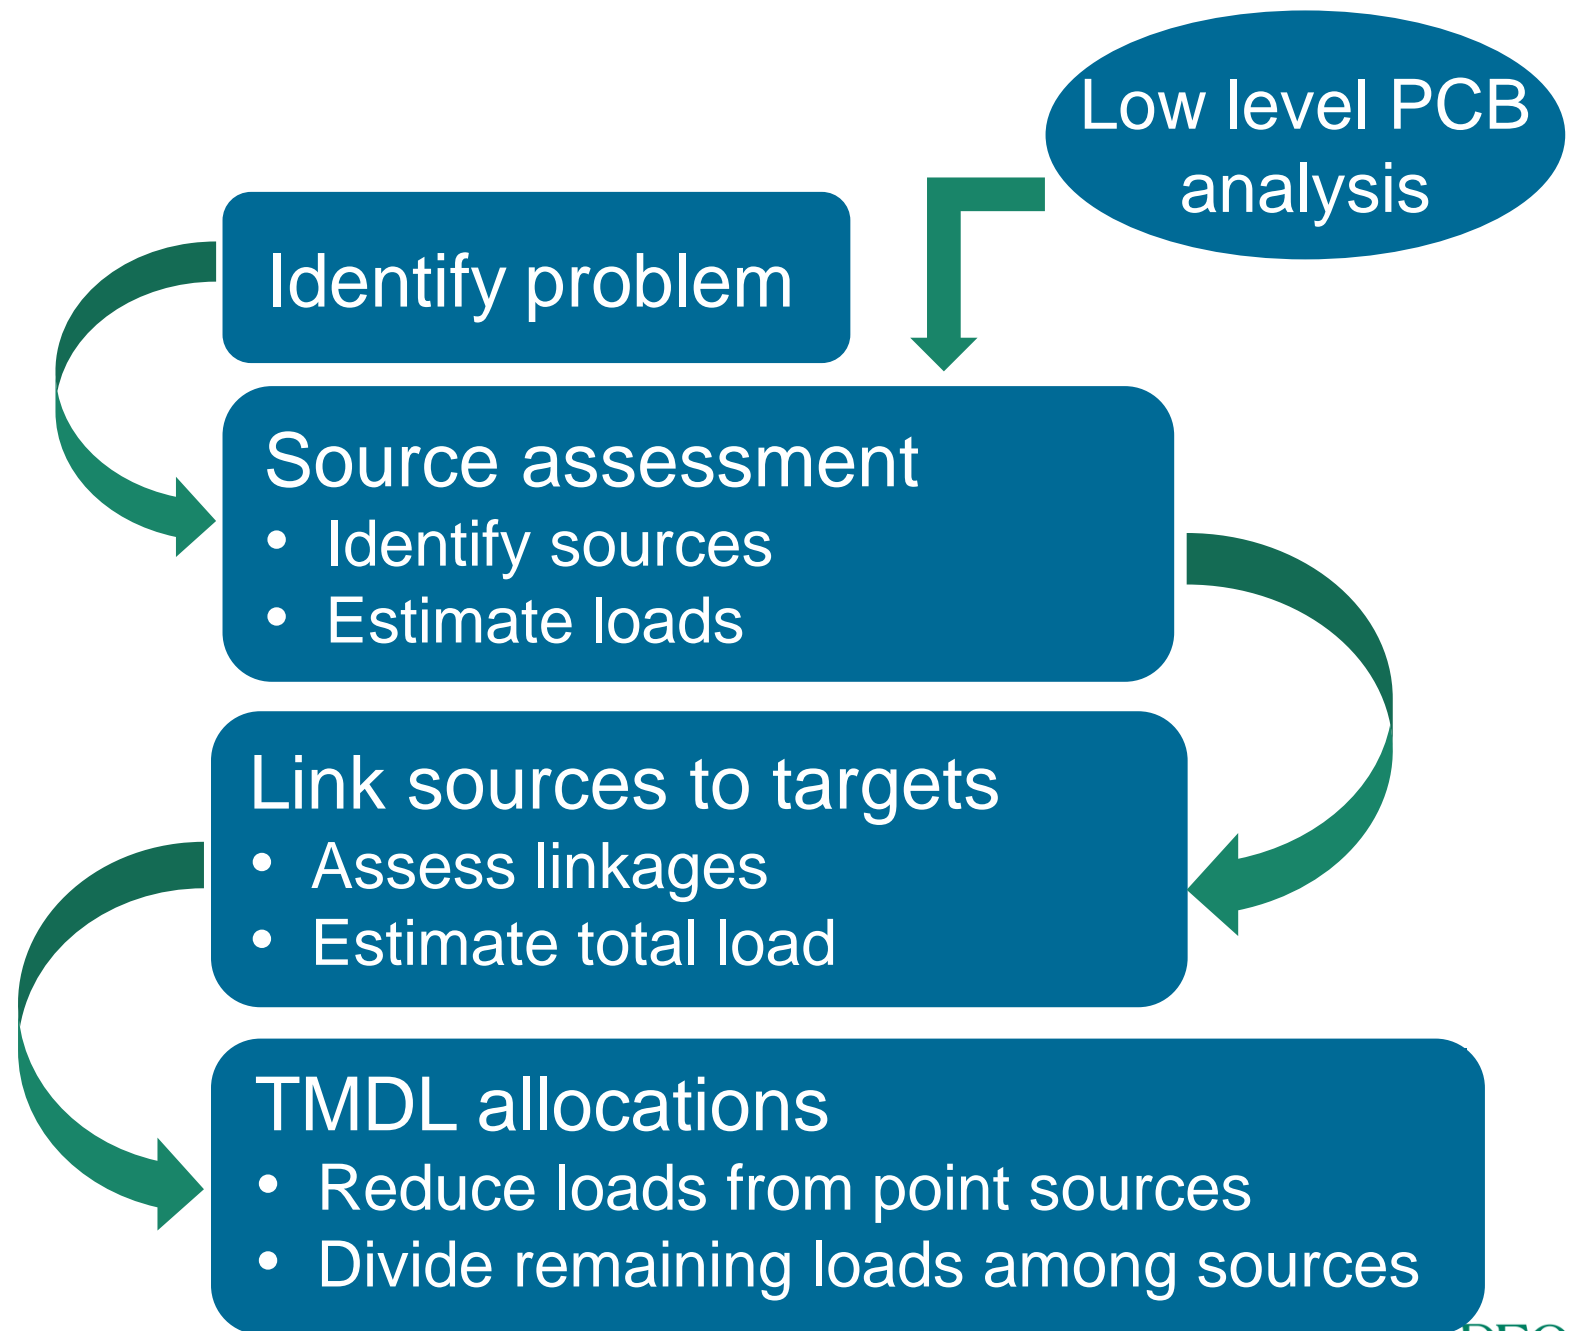

# The TMDL Process

## Fish Consumption Advisory

# 303(d) Listing Date

# Problem Identification

## Additional PCB Impairments Identified by DEQ\*

Affected Water Body	Affected Localities	Listing Year	Length
Jackson River	City of Covington and Alleghany County	2008	12.63 mi
Hardware River	Fluvanna and Albemarle counties	<i>2022 (revised)</i> 2008	<i>(now) 7.21 mi</i> (was) 23.24 mi
Slate River	Buckingham County	2008	3.88 mi
Fishing Creek	City of Lynchburg	2020	6.32 mi
Reedy Creek	City of Richmond	2020	1.08 mi

\*Does not affect swimming

 James, Maury, Jackson River PCB TMDL Watershed

Sources: Esri, USGS, NOAA

# Average Jackson River Fish Tissue Concentrations (1995 – 2017)\*

\*Note, all distances between sites are not equal

# Average Maury River Fish Tissue Concentrations (1995 – 2019)\*

\*Note, all distances between sites are not equal

# Average James River Fish Tissue Concentrations (1995 – 2019)\*

\*Note, all distances between sites are not equal

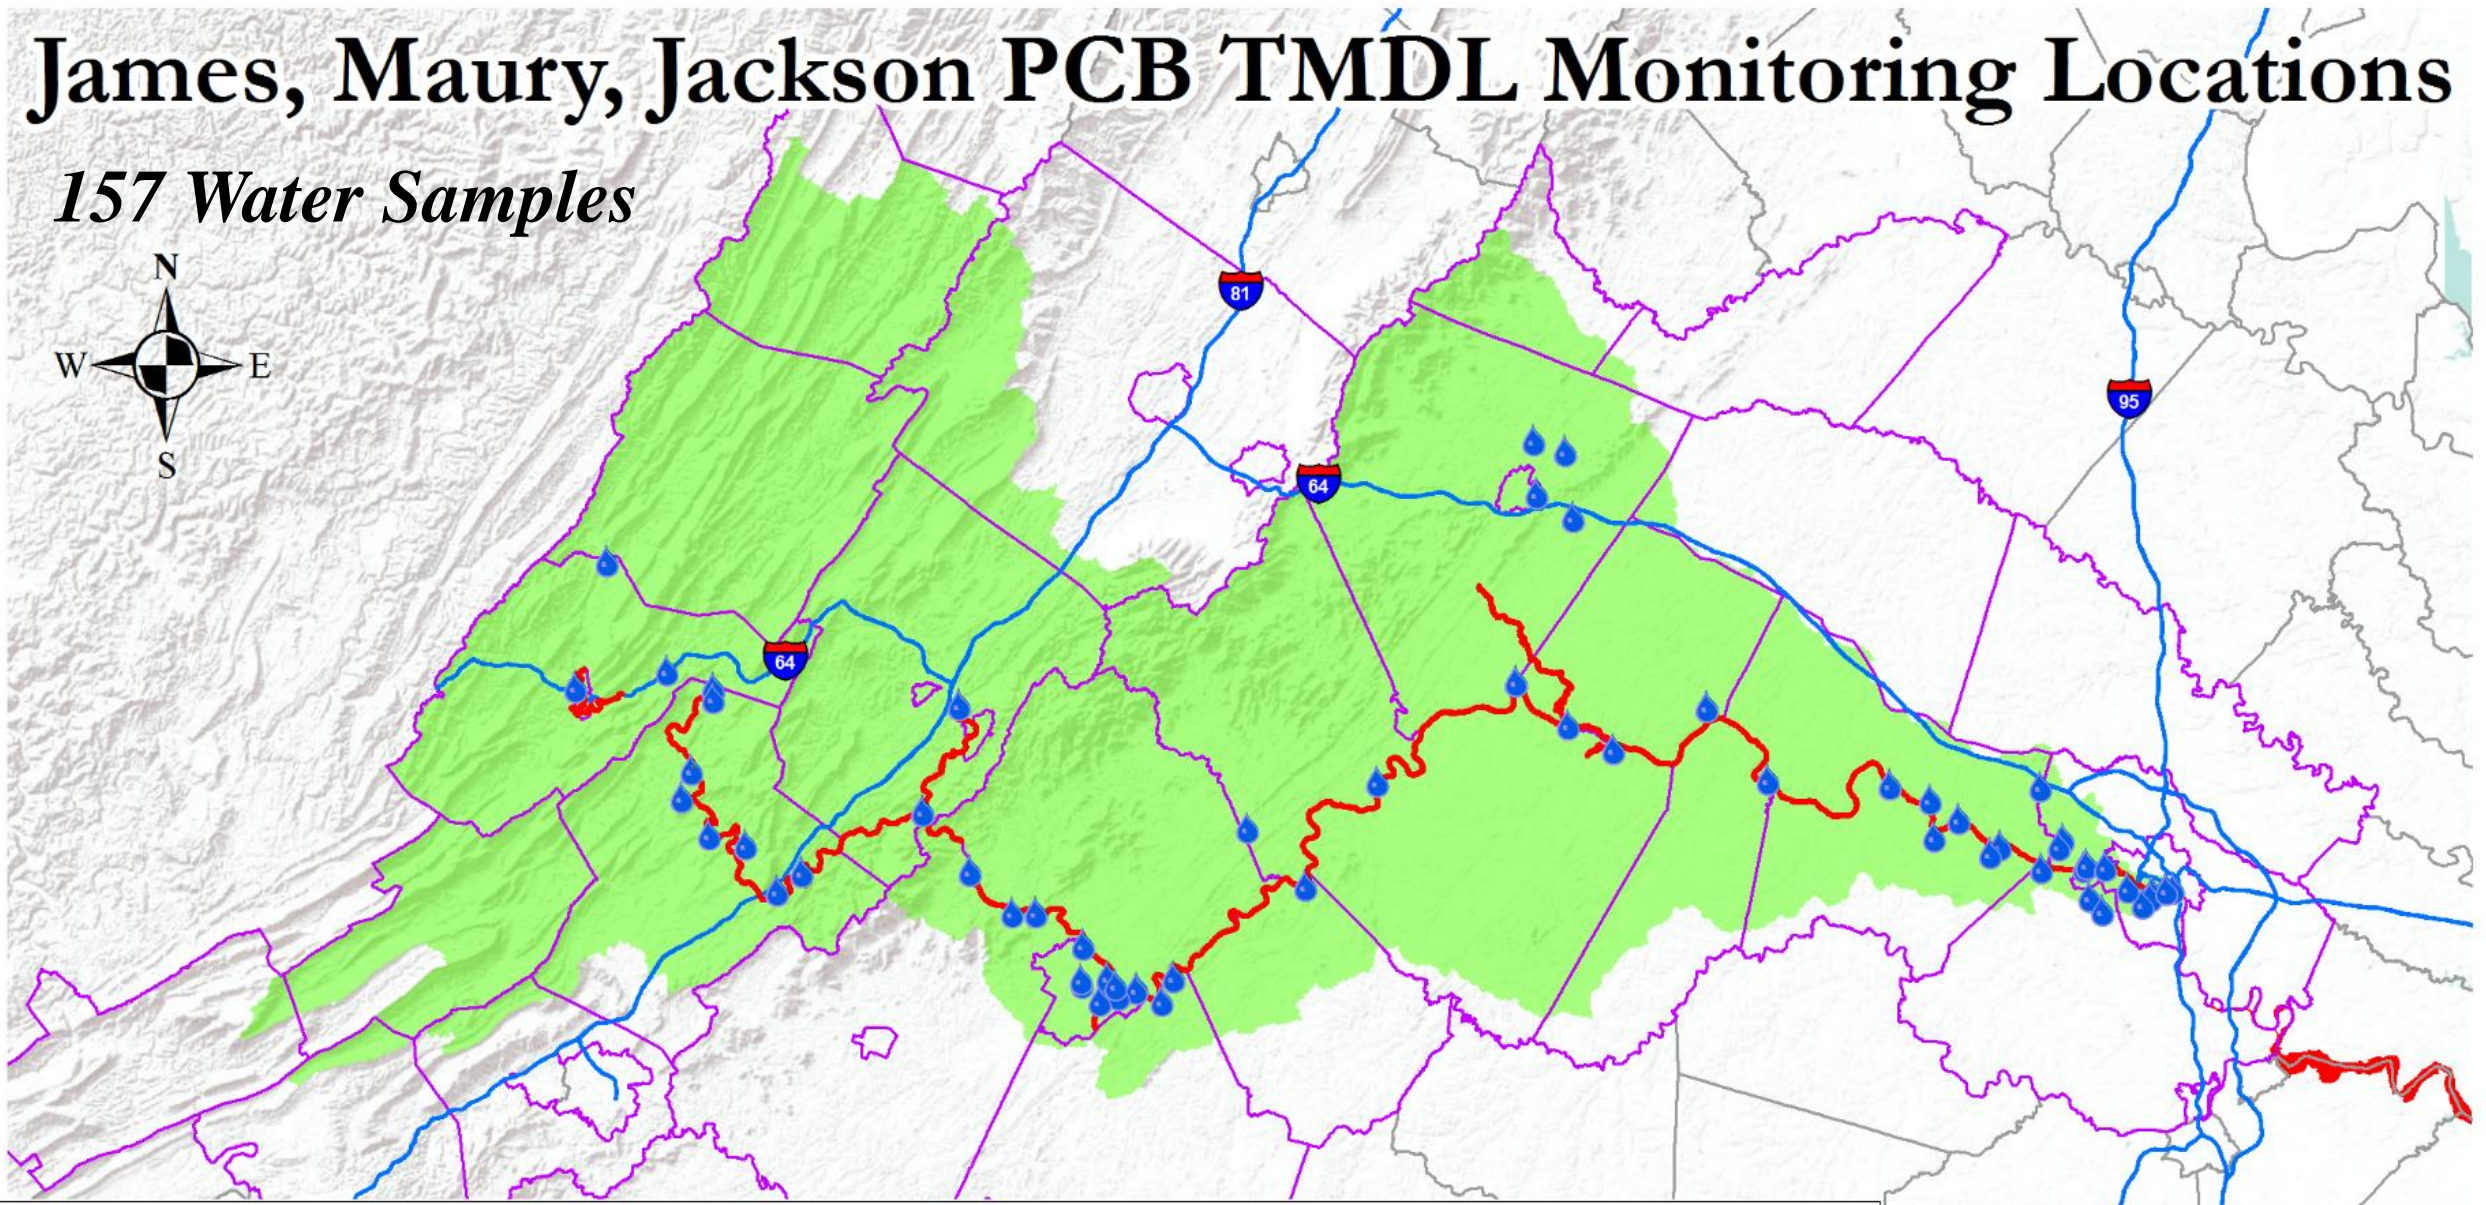

# DEQ TMDL Sampling Approach 2017 – 2019

- Source identification
- TMDL model support
  - Calibration/validation
- 2017 – 2019: fish tissue, water column, sediment, flow
  - Fish tissue (n = 93)
  - Water column samples: High and Base Flow (n = 157)
  - Sediment samples (n = 26)

# James, Maury, Jackson PCB TMDL Monitoring Locations

*157 Water Samples*

 Water Column Sample Locations	 Study Area Cities and Counties
 PCB Impaired Waters	 James, Maury, Jackson River PCB TMDL Watershed

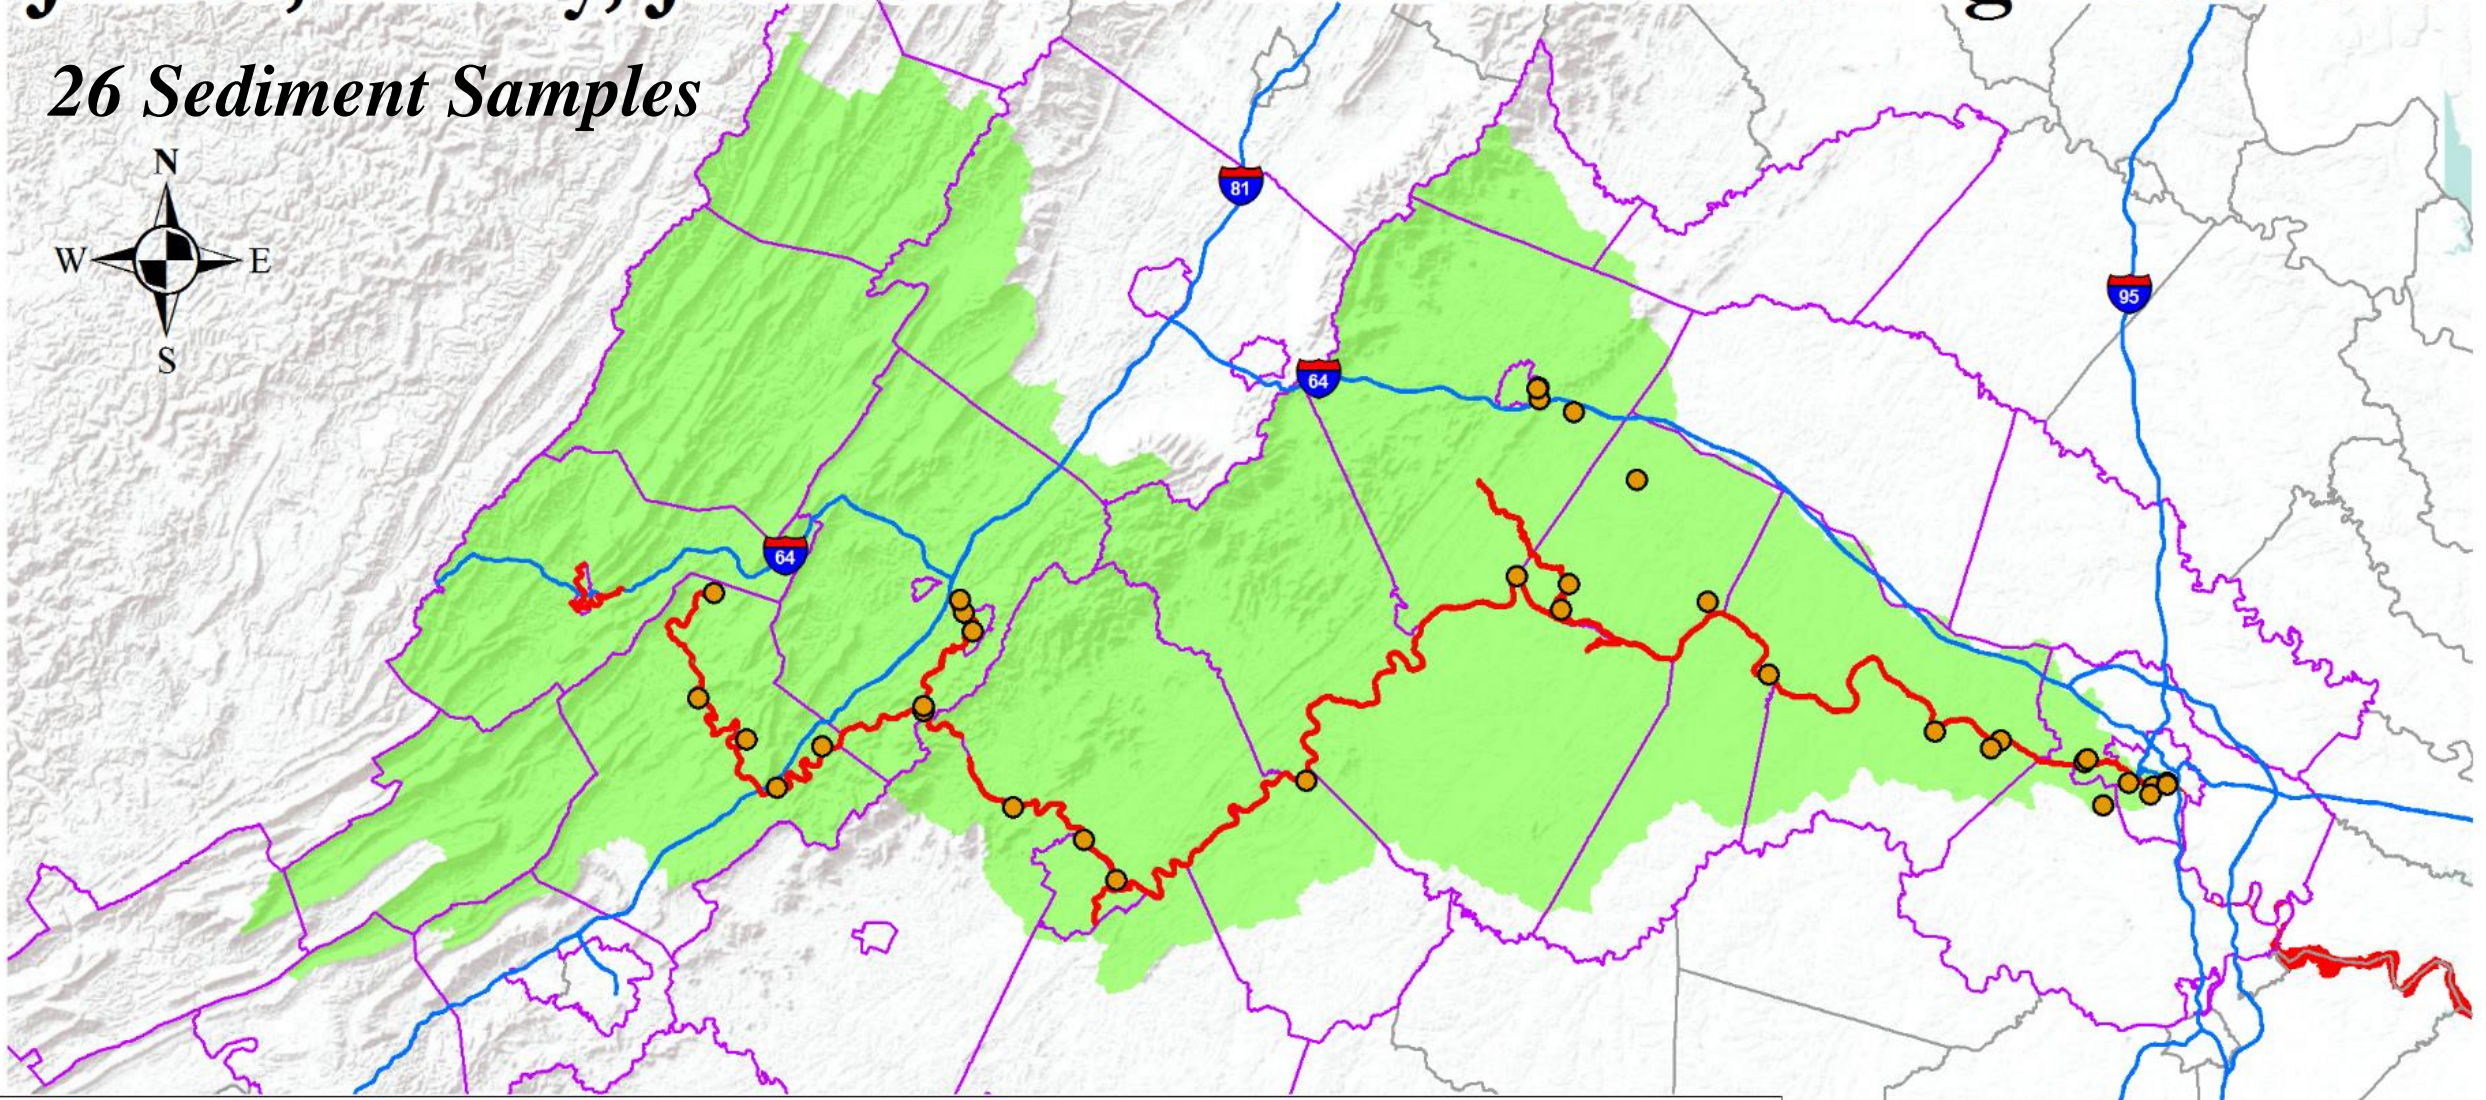

# Water Column PCB Sampling Results\*

\*Tributaries are included where they flow into the James River

# James, Maury, Jackson PCB TMDL Monitoring Locations

*26 Sediment Samples*

- Sediment Sample Locations
- Study Area Cities and Counties
- ~ PCB Impaired Waters
- James, Maury, Jackson River PCB TMDL Watershed

# Sediment PCB Sampling Results

\*Tributaries are included where they flow into the James River

# TMDL Source Categories

## Waste Load Allocation (WLA)

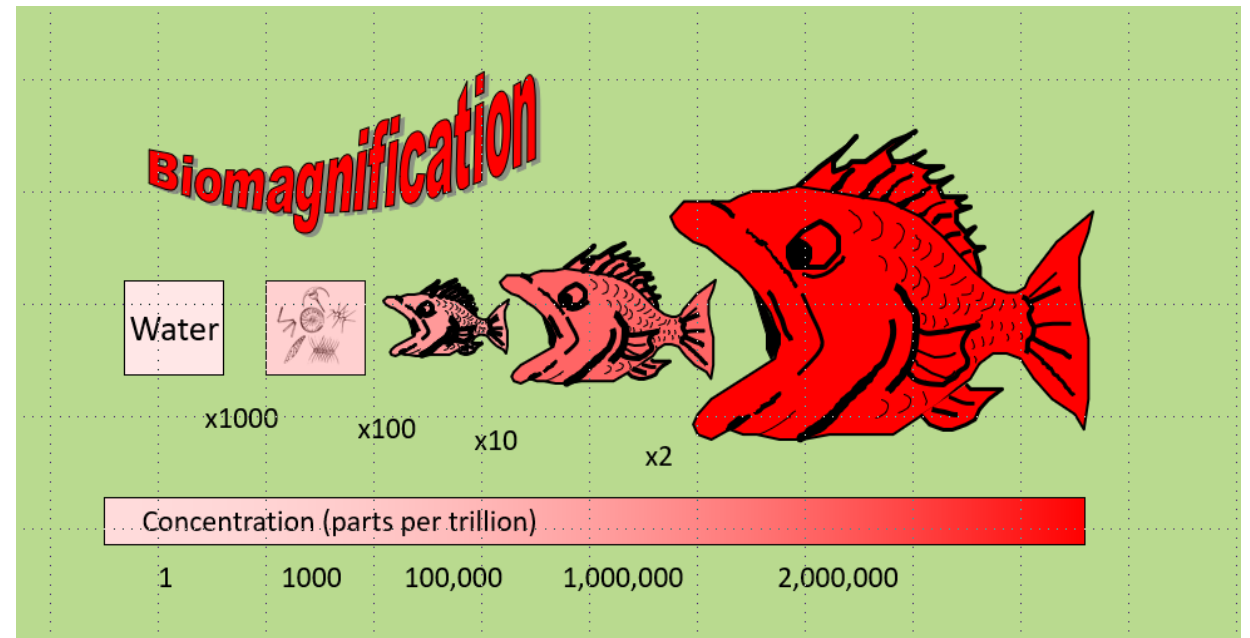

- Permitted Facilities
  - Municipal WWTPs (26)
  - Combined sewer overflows (2)
  - Industrial facilities (73)
    - Two permit types
  - Regulated stormwater (11)
    - MS4s

## Load Allocation (LA)

- Contaminated Sites
  - Rail yards/spurs
  - Electric utility transformer pads
  - Brownfields sites
  - DEQ Voluntary Remediation Program
- Spill sites
- Nonregulated surface load
  - Stormwater
  - Small tributaries
  - Unidentified contaminated sites
  - Unspecified permitted facilities
- Atmospheric deposition
- Streambed sediment

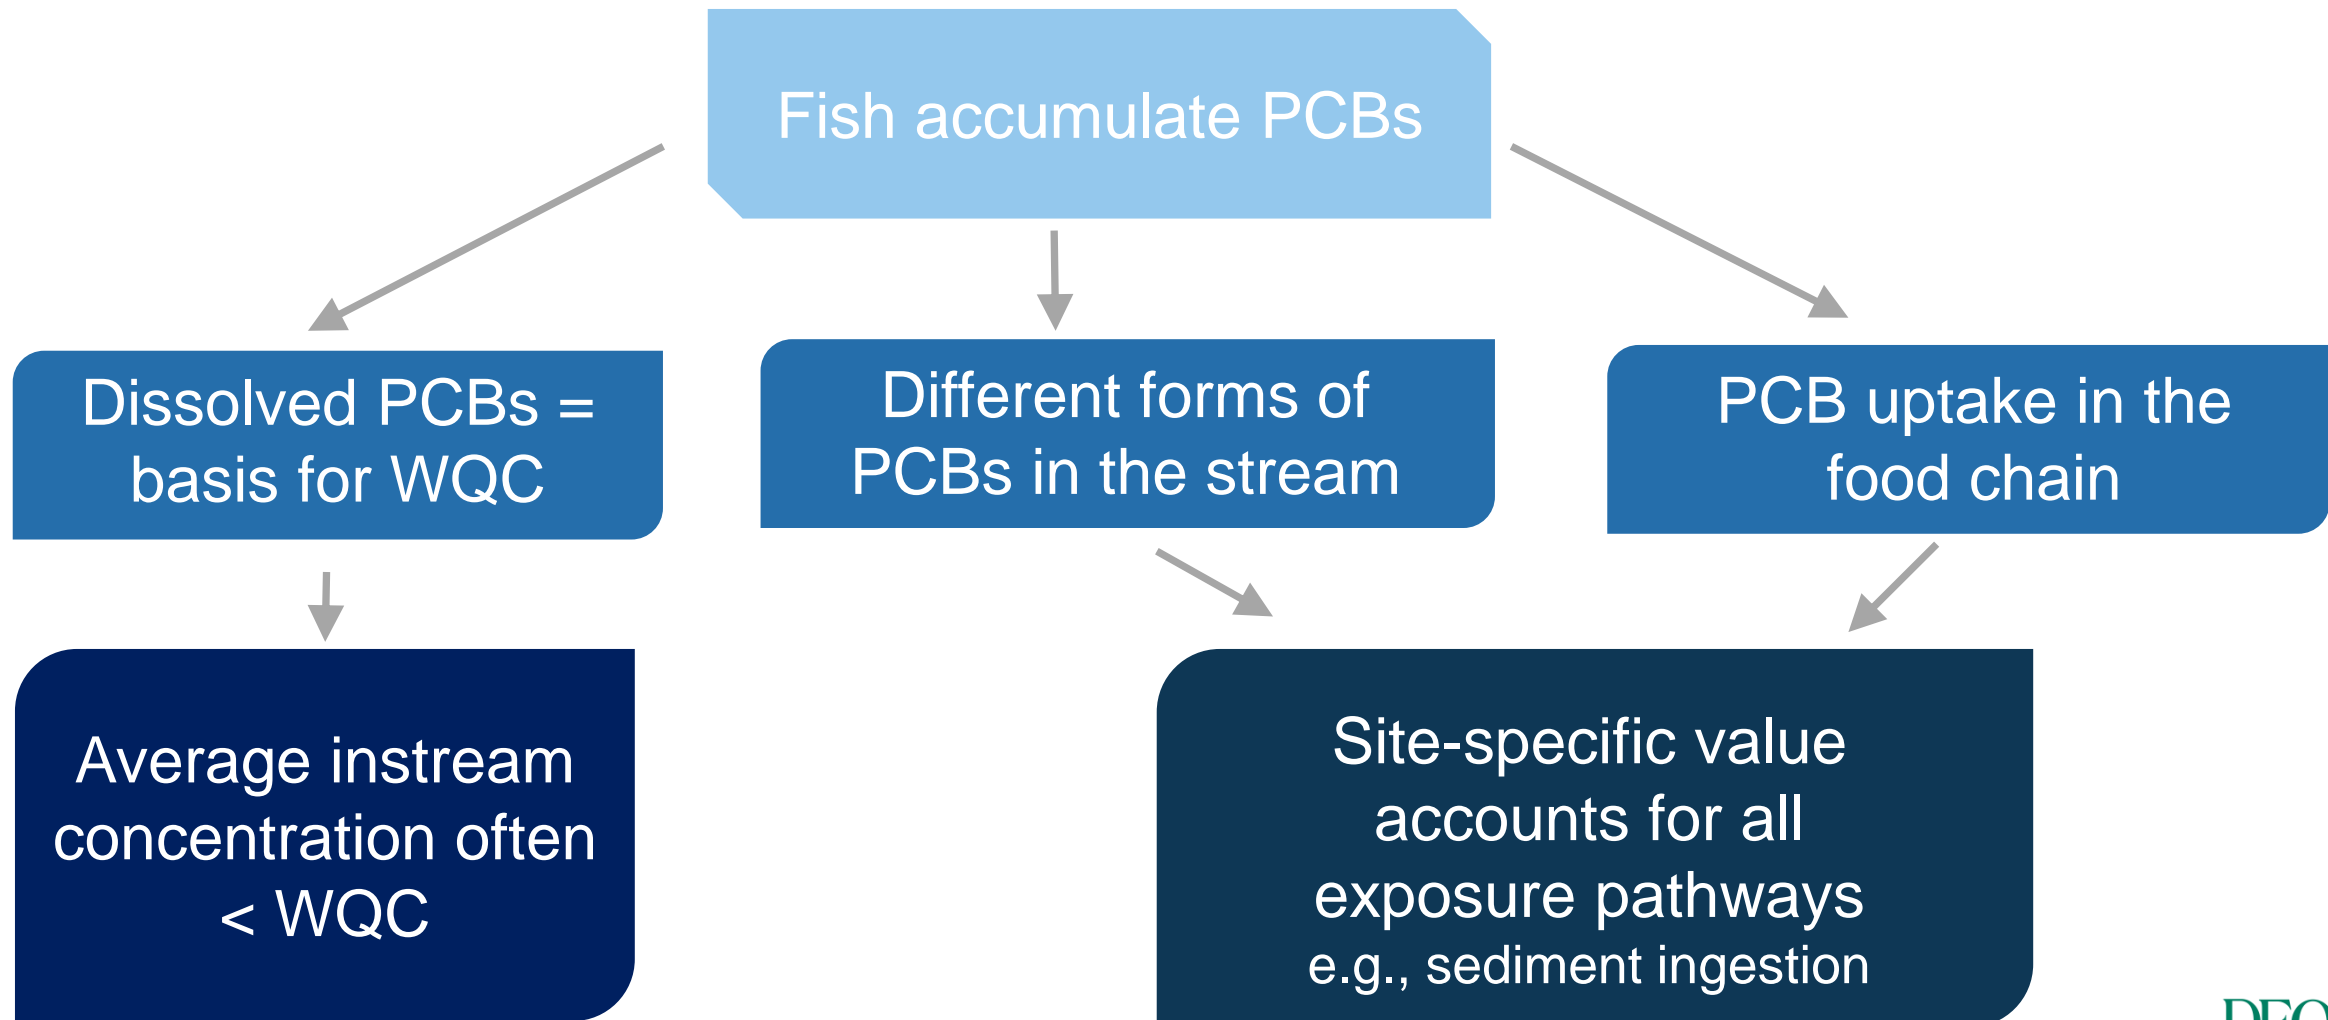

# TMDL Endpoints - Site-Specific

- PCB WQC derived from a single exposure pathway to fish
  - Bioconcentration/exposure via dissolved PCBs
- PCBs bioaccumulate at a low conc. (pg/L)
  - Water, sediment
- PCBs biomagnify
  - Food
- Narrative Water Quality Standard (accounts for toxic pollutants that bioaccumulate)

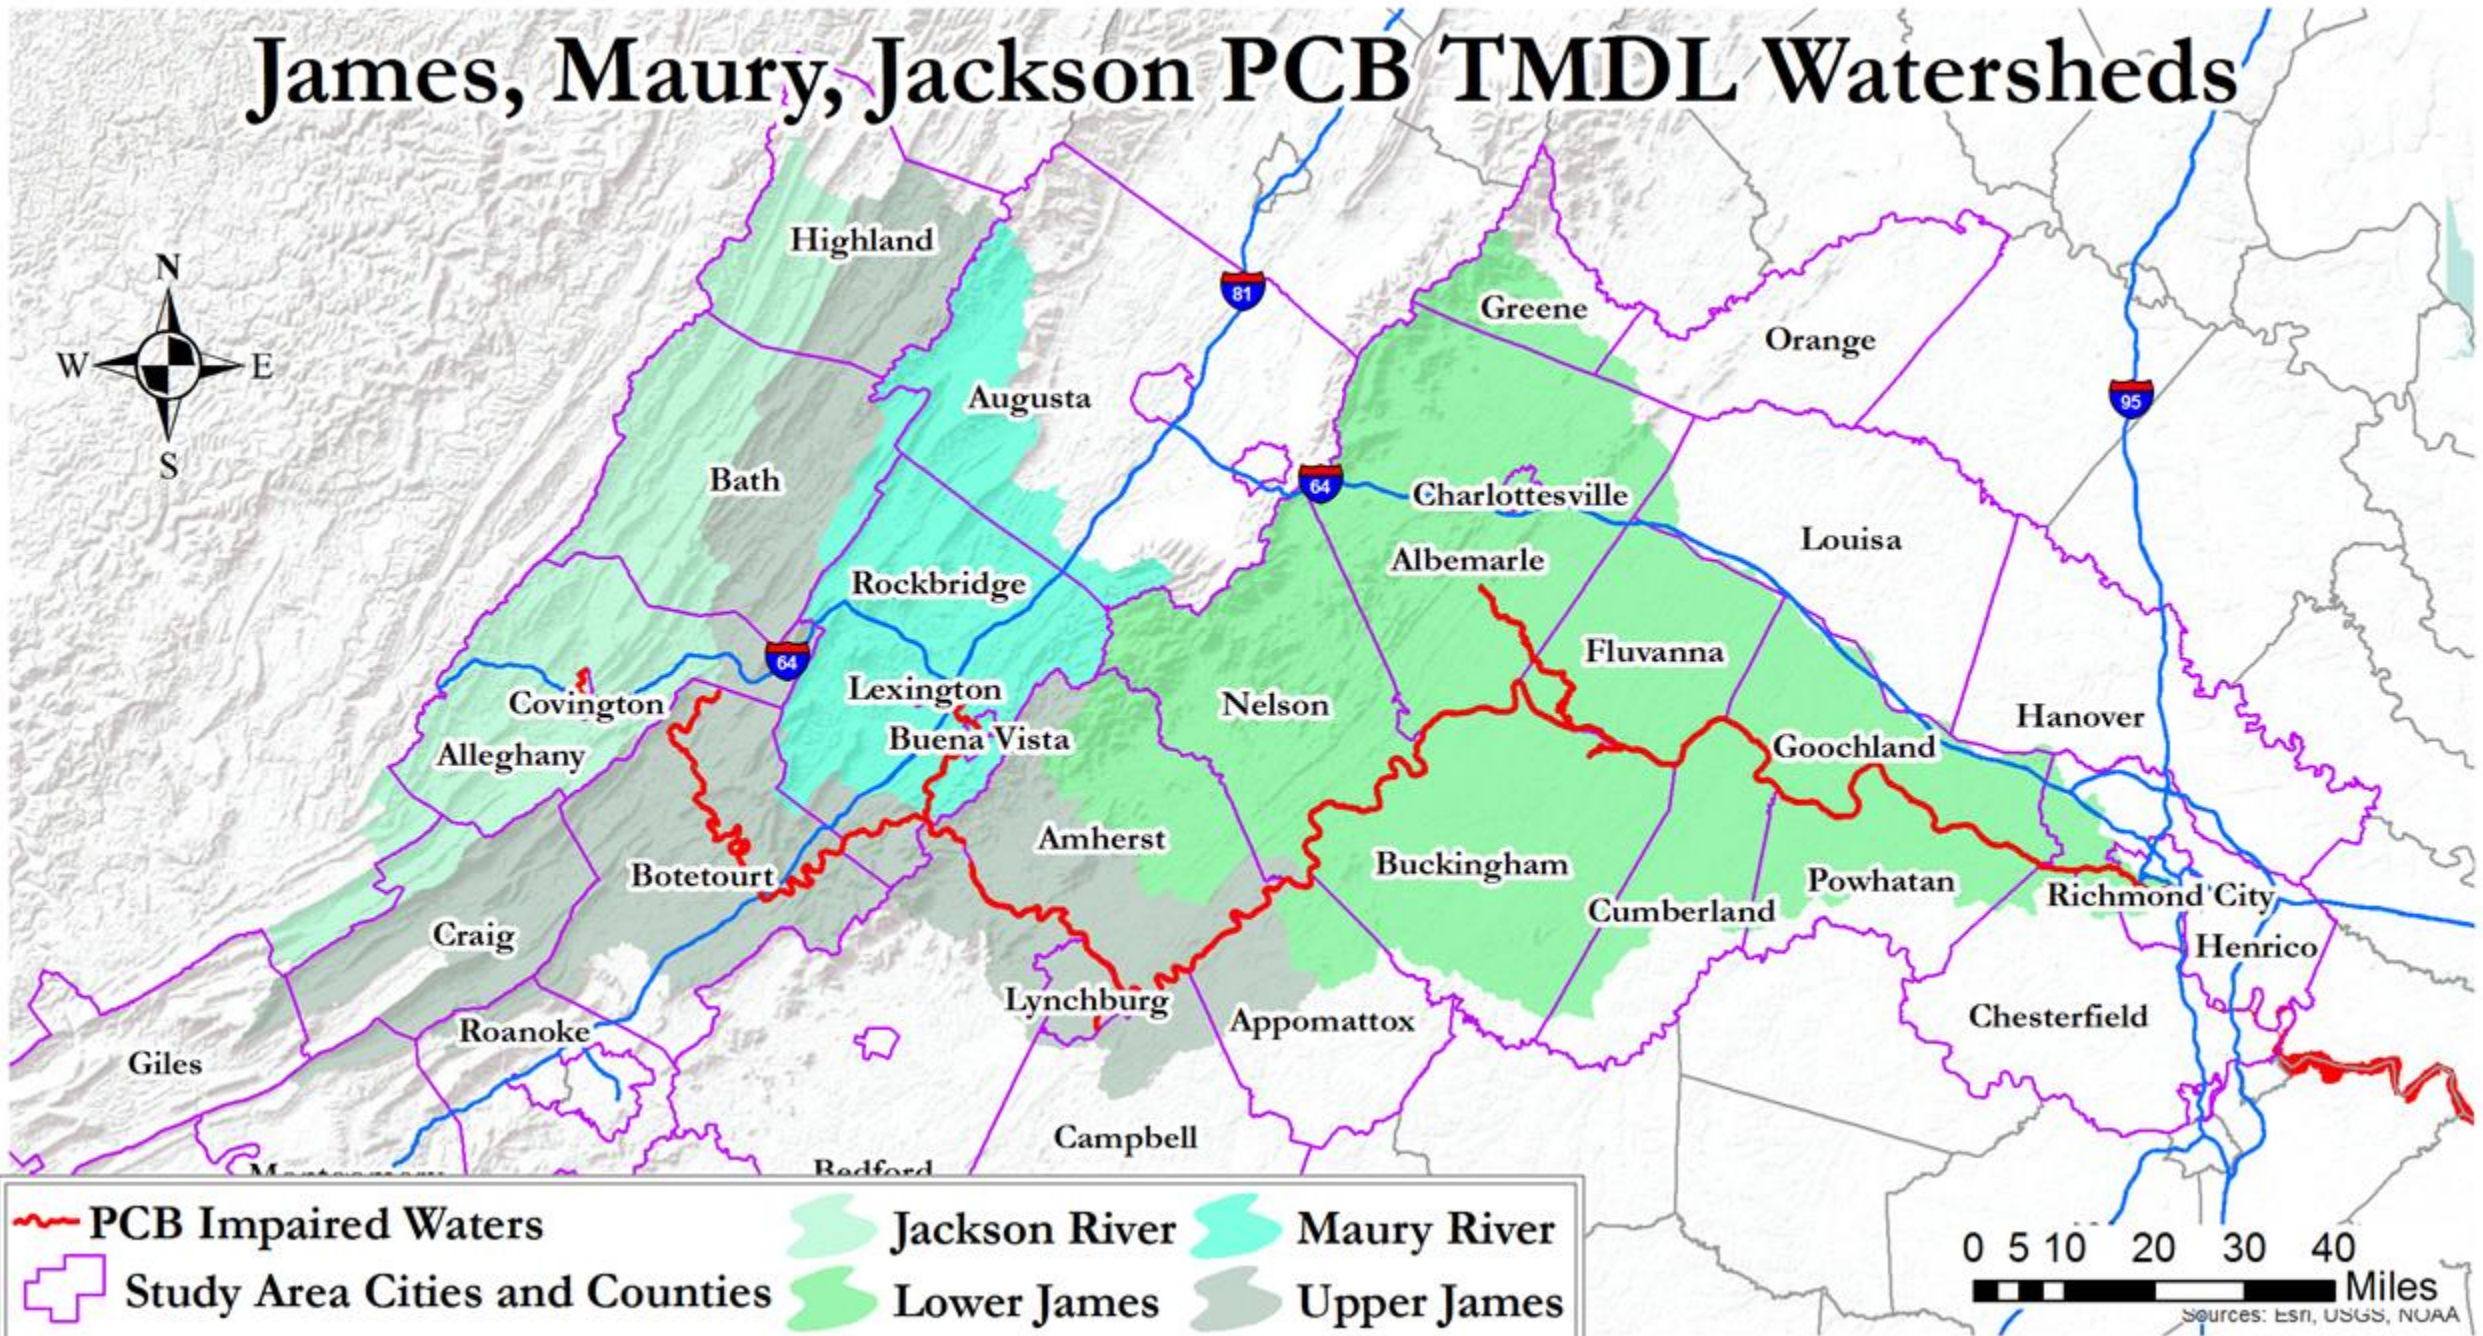

# Factors to Consider for a Site-Specific Endpoint

# James, Maury, Jackson PCB TMDL Watersheds

PCB Impaired Waters	Jackson River	Maury River
Study Area Cities and Counties	Lower James	Upper James

# Bioaccumulation Factor Endpoint Selection

- BAFs were calculated for individual fish species in each TMDL watershed
- Three scenarios presented:
  1. Use species of commercial/recreational interest with sample size  $\geq 8$
  2. Use consumption advisory species regardless of sample size
  3. Use consumption advisory species with a sample size  $\geq 8$

TMDL Watershed	Scenario 1 Mean	Scenario 2 Mean	Scenario 3 Mean
Jackson River	1024.1 pg/L*	n/a*	n/a* <b>(580)</b>
Maury River	320 pg/L	300 pg/L	400 pg/L
Upper James River	1,186.8 pg/L*	91 pg/L	120 pg/L
Lower James River	140 pg/L	61 pg/L	52 pg/L

\*These cases would default to a TMDL endpoint equal to the criterion = 580 pg/L

# HSPF Model Process

- PCB model consists of 3 major components:

1. Hydrology
2. Sediment transport
3. PCB fate and transport

- Model calibrated using observed data:

1. Stream gage flow data
2. Suspended sediment concentration data
3. PCB concentration data

<http://prairierivers.org/what-is-a-watershed/>

# How is the model used?

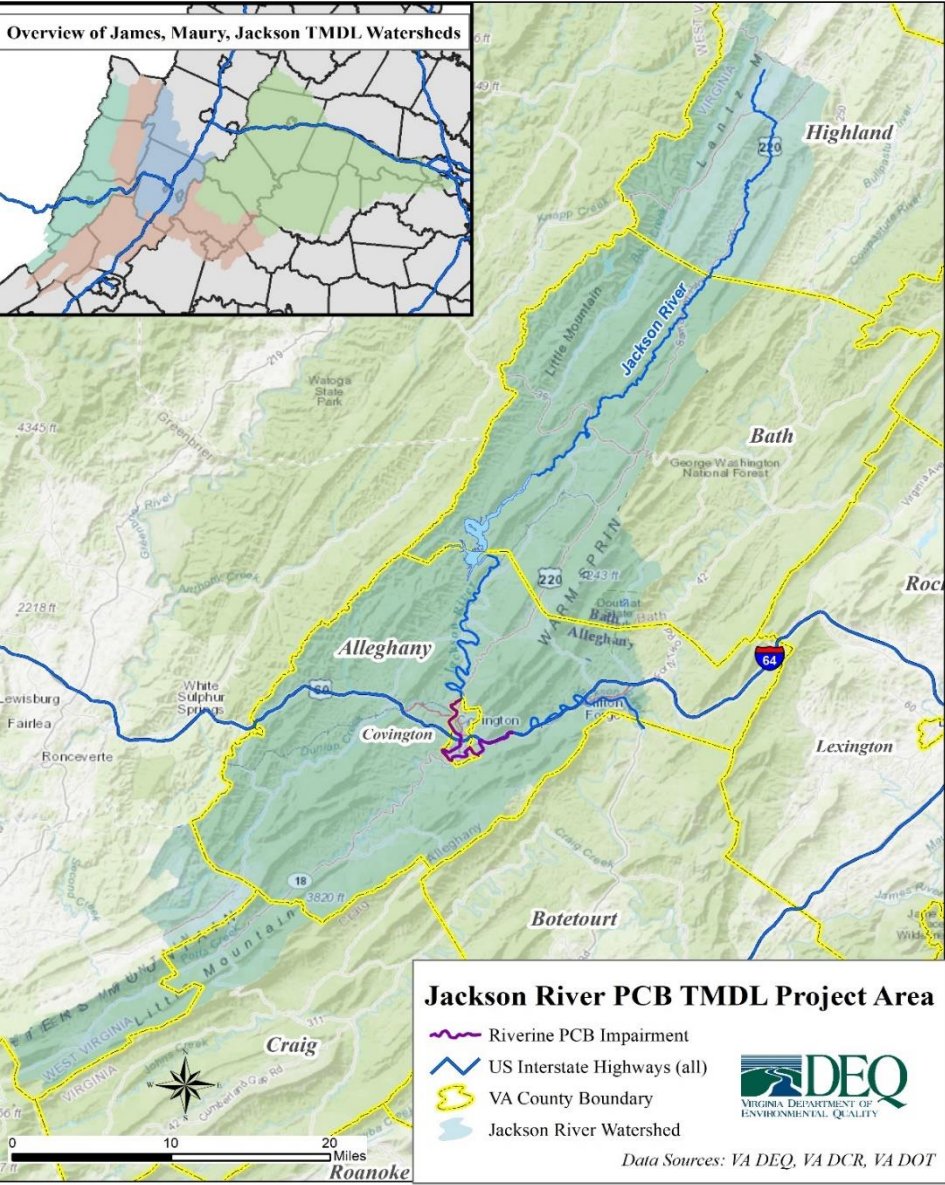

1. Watershed inputs are used to develop model.
2. Model simulates watershed processes (flow, pollutant fate and transport).
3. Model is calibrated to observed data.
4. Calibrated PCB outputs are compared with TMDL endpoints.

5. Model allows evaluation of multiple pollution reduction scenarios.
6. Select acceptable reduction scenario to achieve TMDL.

# PCB Modeled Results and Allocations

# Annual Relative Contributions to PCB Concentrations at the Jackson River Outlet

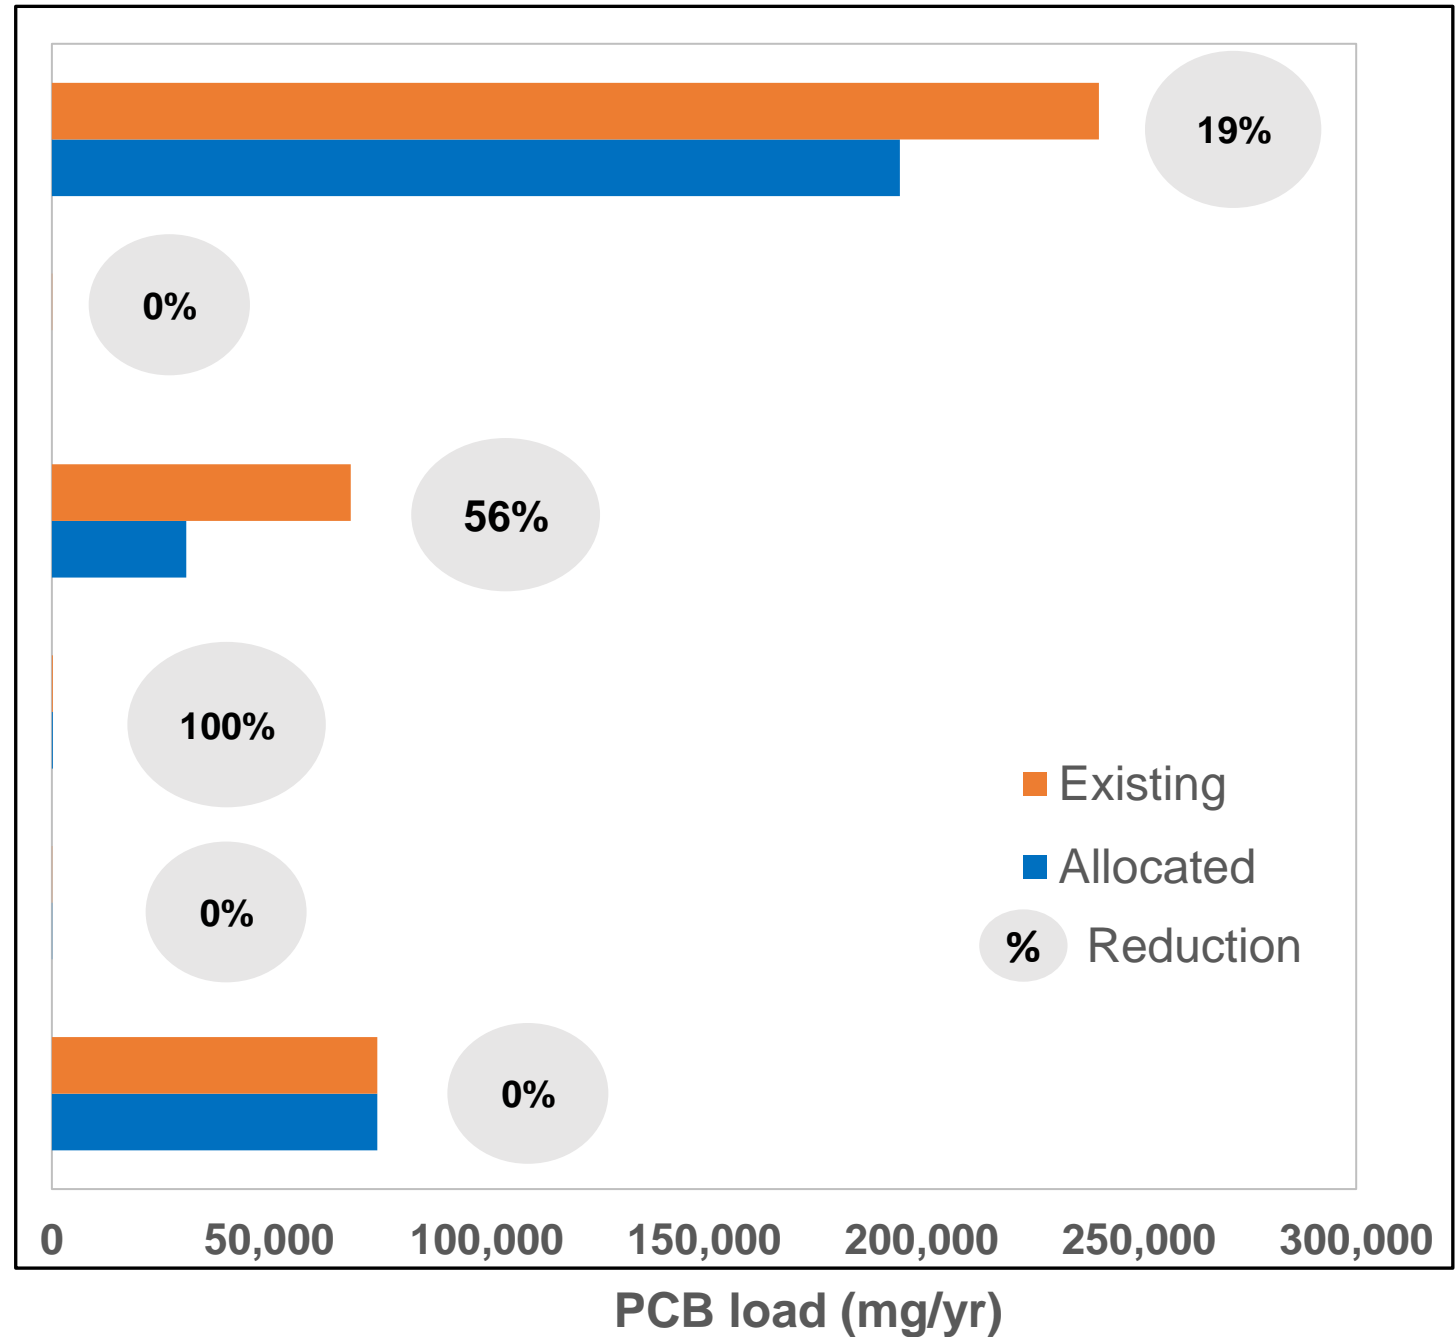

- Streambed Sediment
- Atmospheric Deposition
- Known Contaminated Sites
- Permitted
- Spills
- Unregulated Surface Load (Stormwater)

# Jackson River PCB Source Loads

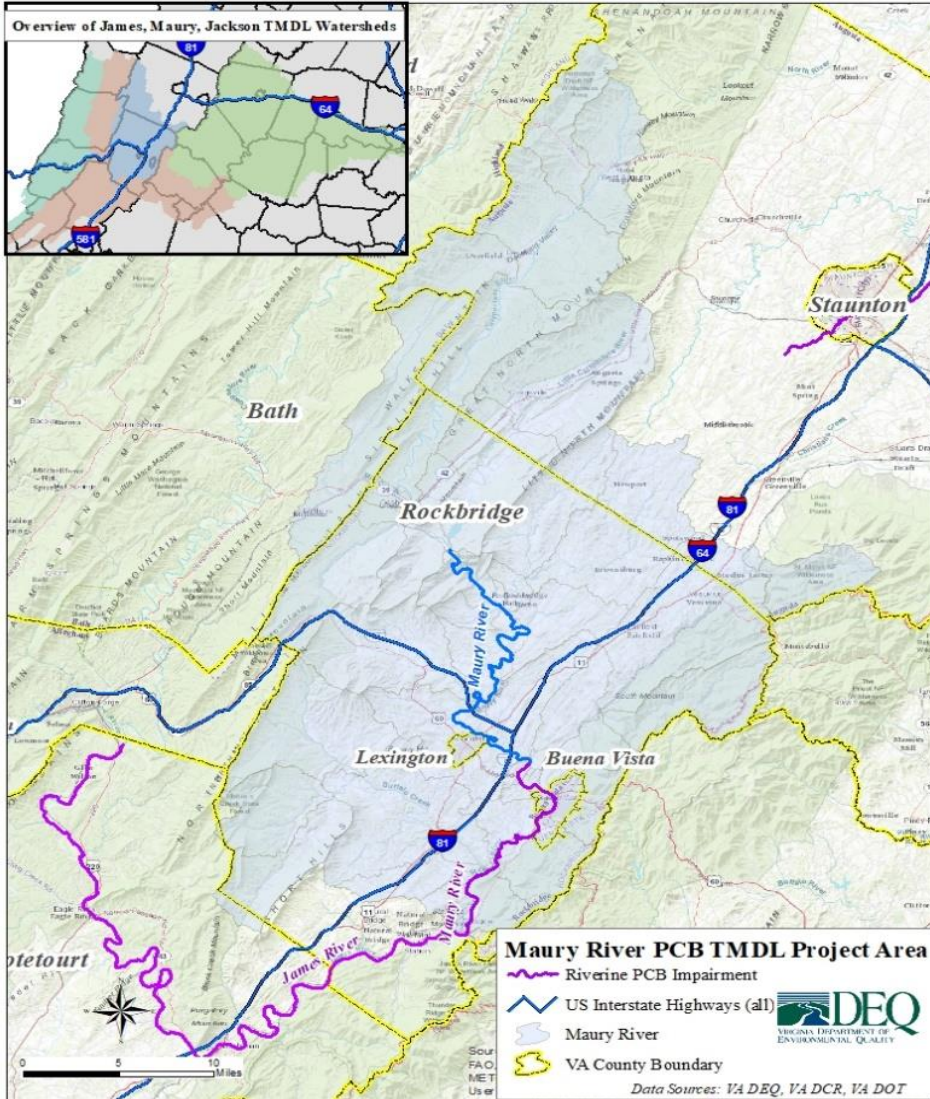

TMDL  
Endpoint = 580  
pg/L (Applied  
as a Long-  
Term Average)

Surface Load-  
Unregulated  
SW  
Known  
Contaminated  
sites  
Permitted  
Spills  
Atmospheric  
Deposition  
Streambed  
sediment

# Annual Relative Contributions to PCB Concentrations at the Maury River Outlet

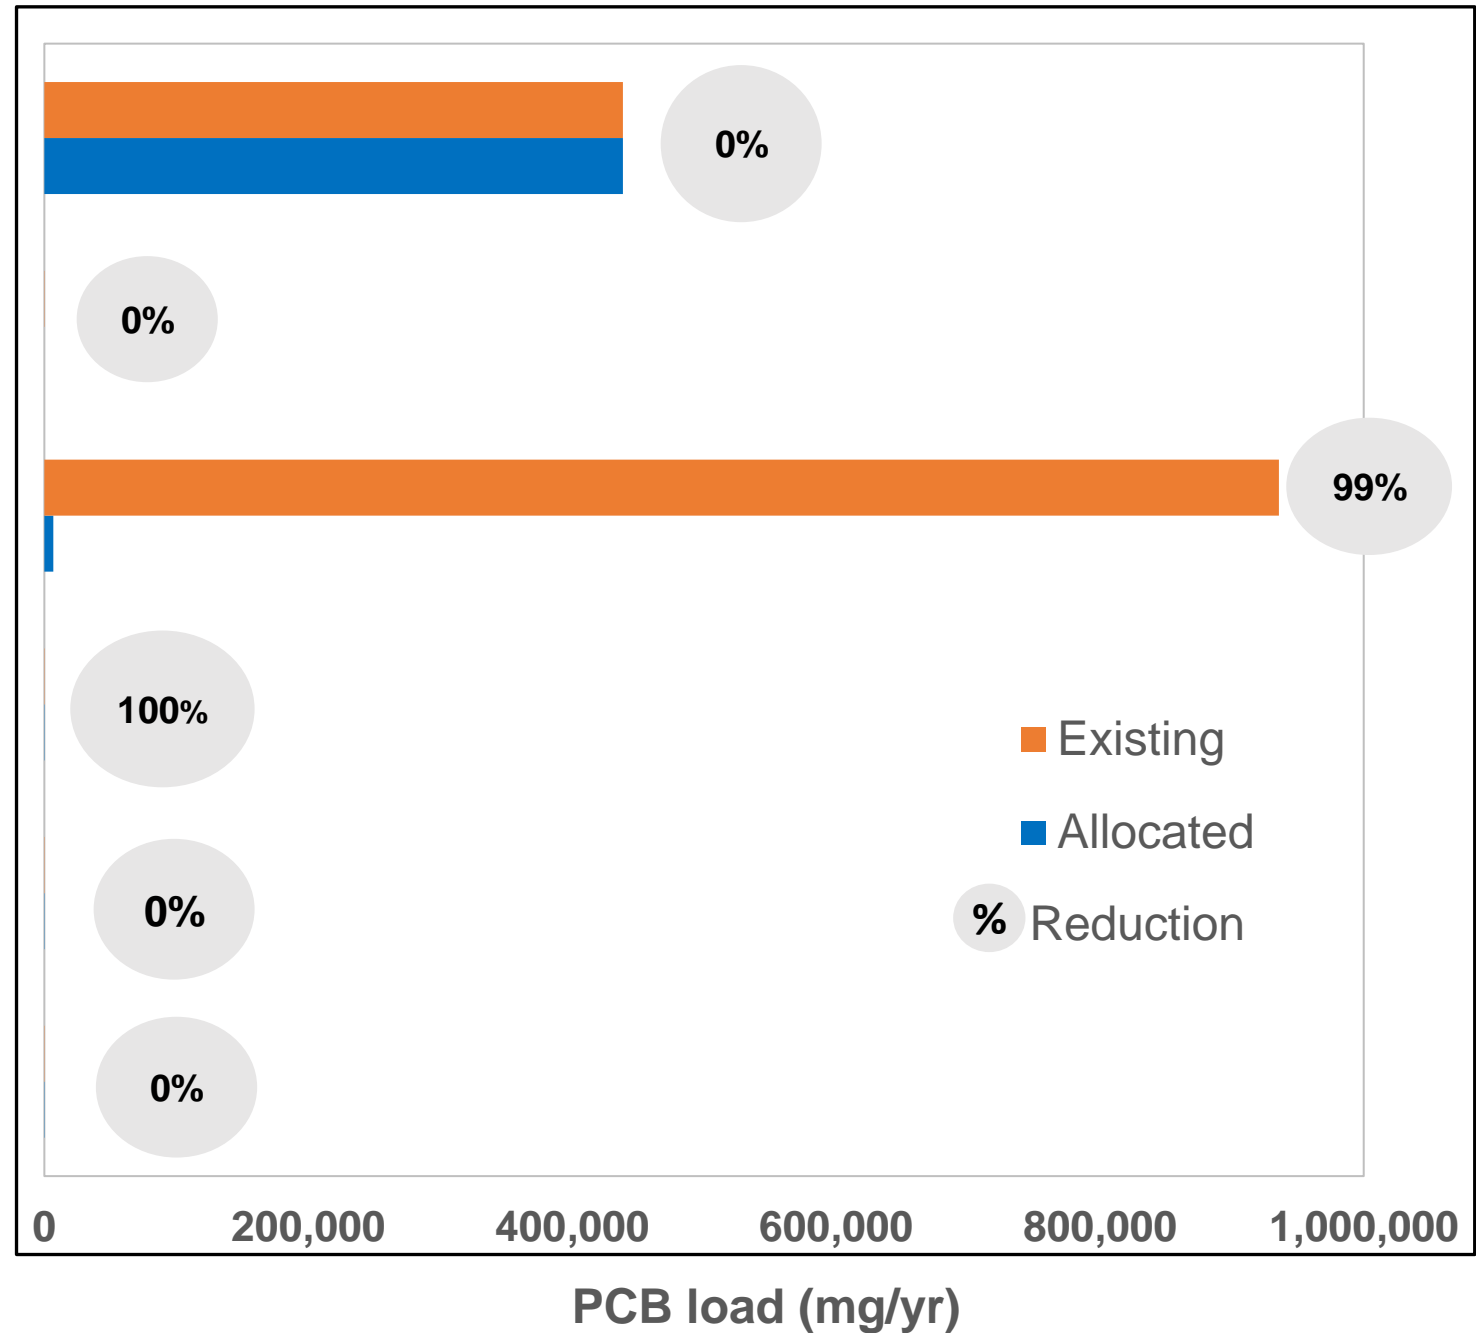

- Streambed Sediment
- Atmospheric Deposition
- Known Contaminated Sites
- Permitted
- Spills
- Unregulated Surface Load (Stormwater)

# Maury River PCB Source Loads

TMDL Endpoint =  
400 pg/L (Applied  
as Long-Term  
Average)

Surface Load-  
Unregulated  
SW  
Known  
Contaminated  
sites  
Permitted  
Spills  
Atmospheric  
Deposition  
Streambed  
sediment

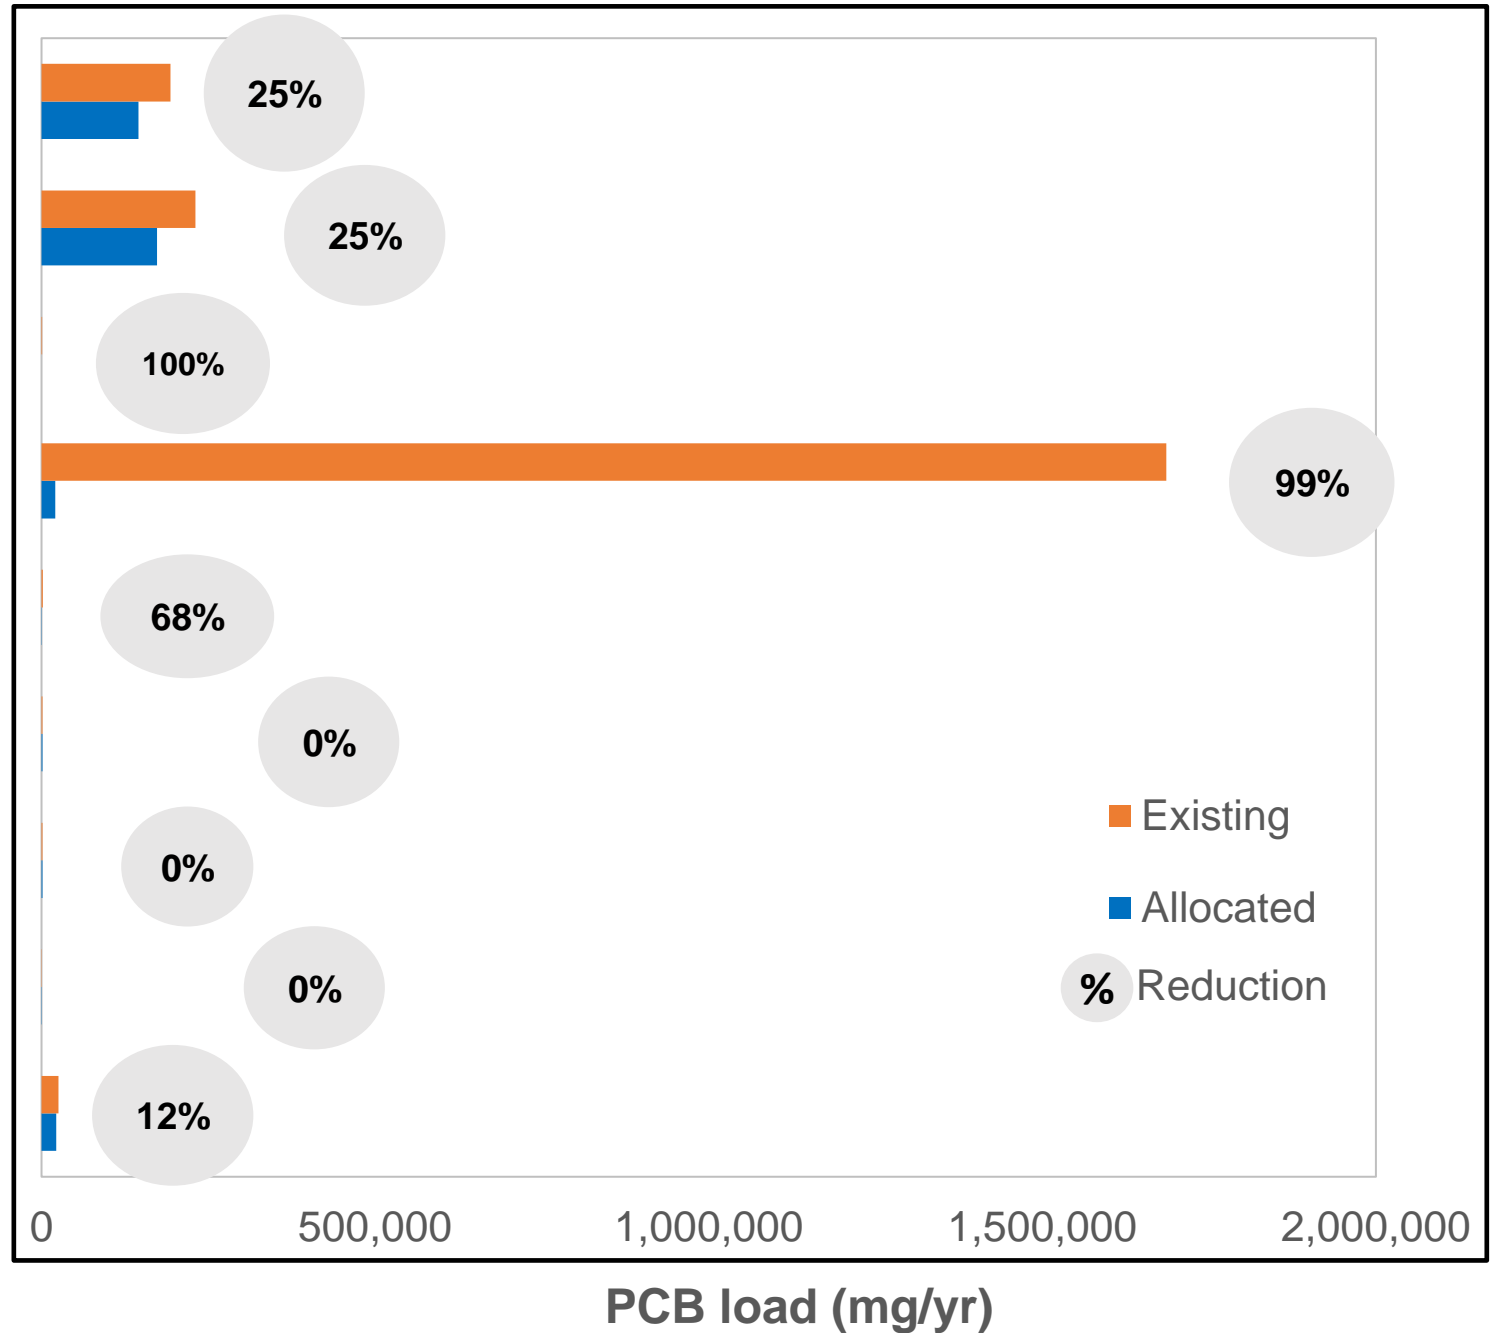

# Upper James River PCB Source Loads

TMDL  
Endpoint = 120  
pg/L (Applied  
as a Long-  
Term Average)

- Surface Load-regulated SW
- Surface Load-Unregulated SW
- Spills
- Permitted
- CSO
- Known Contam. sites
- Atmospheric Deposition
- Streambed sediment
- Jackson and Maury Rivers

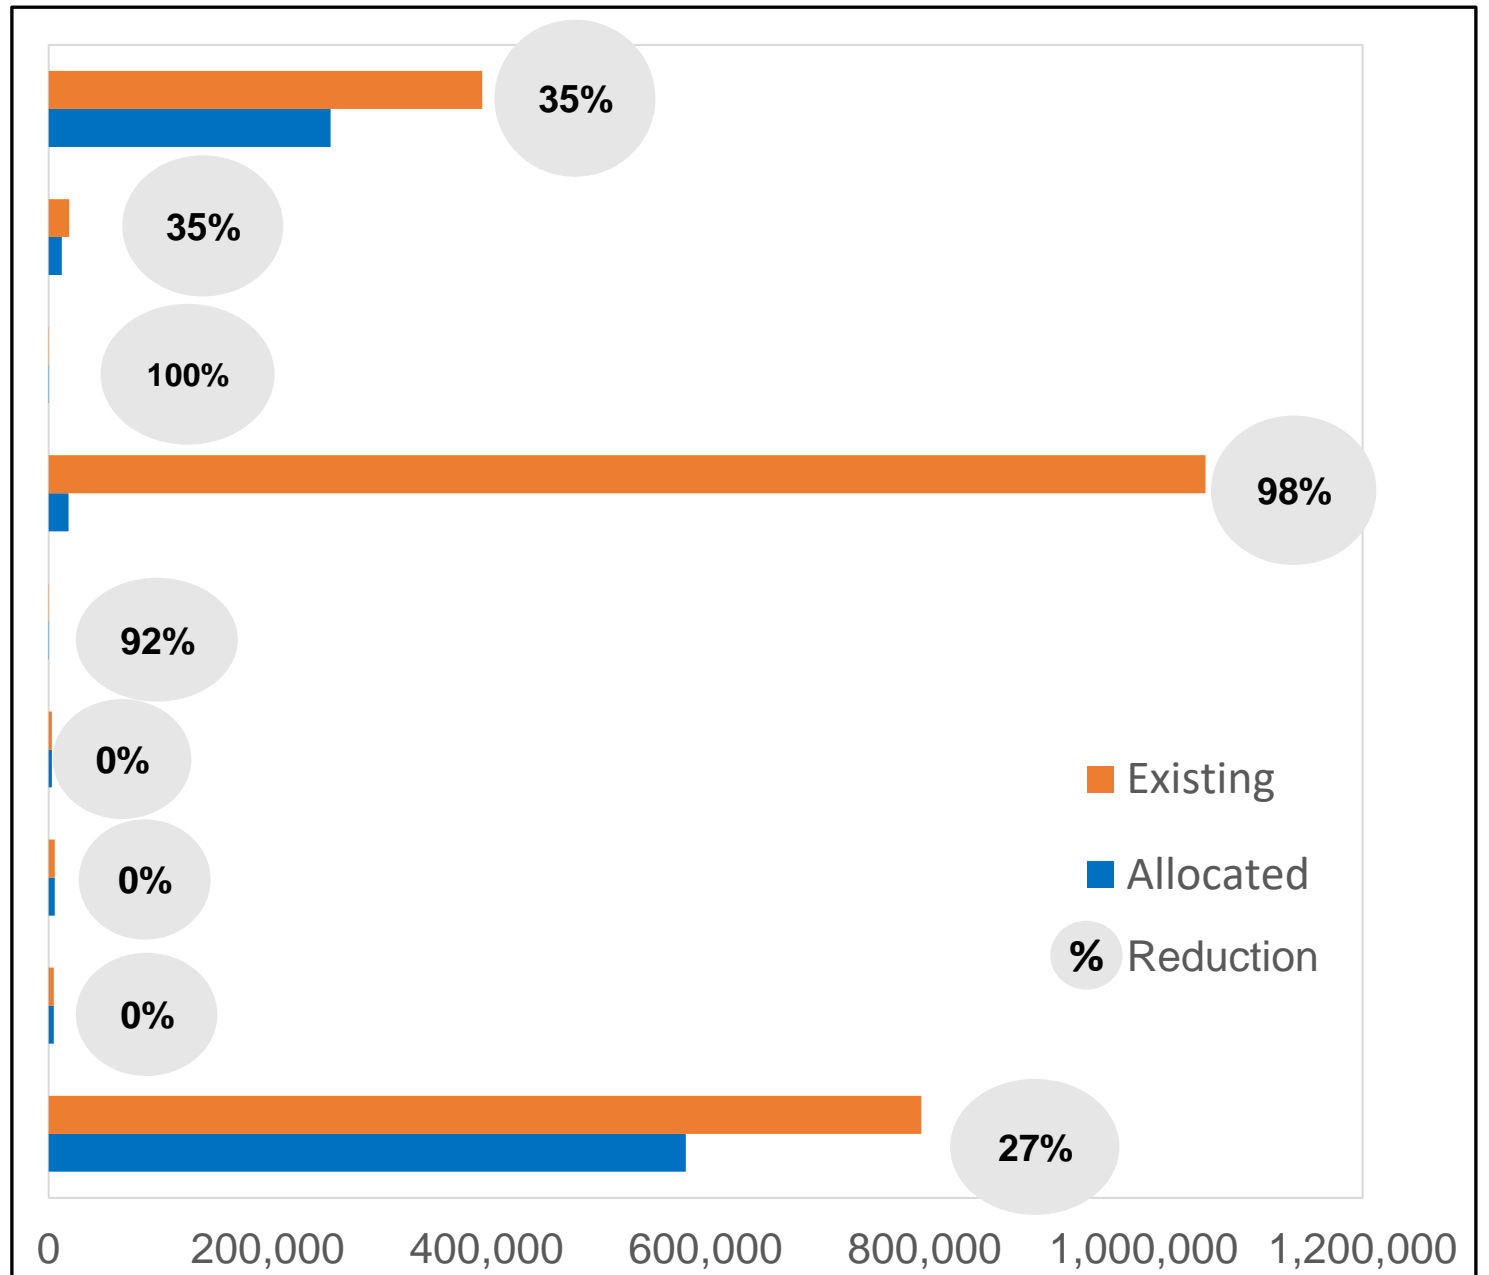

# Annual Relative Contributions to PCB Concentrations at the Lower James River Outlet

# Lower James River PCB Source Loads

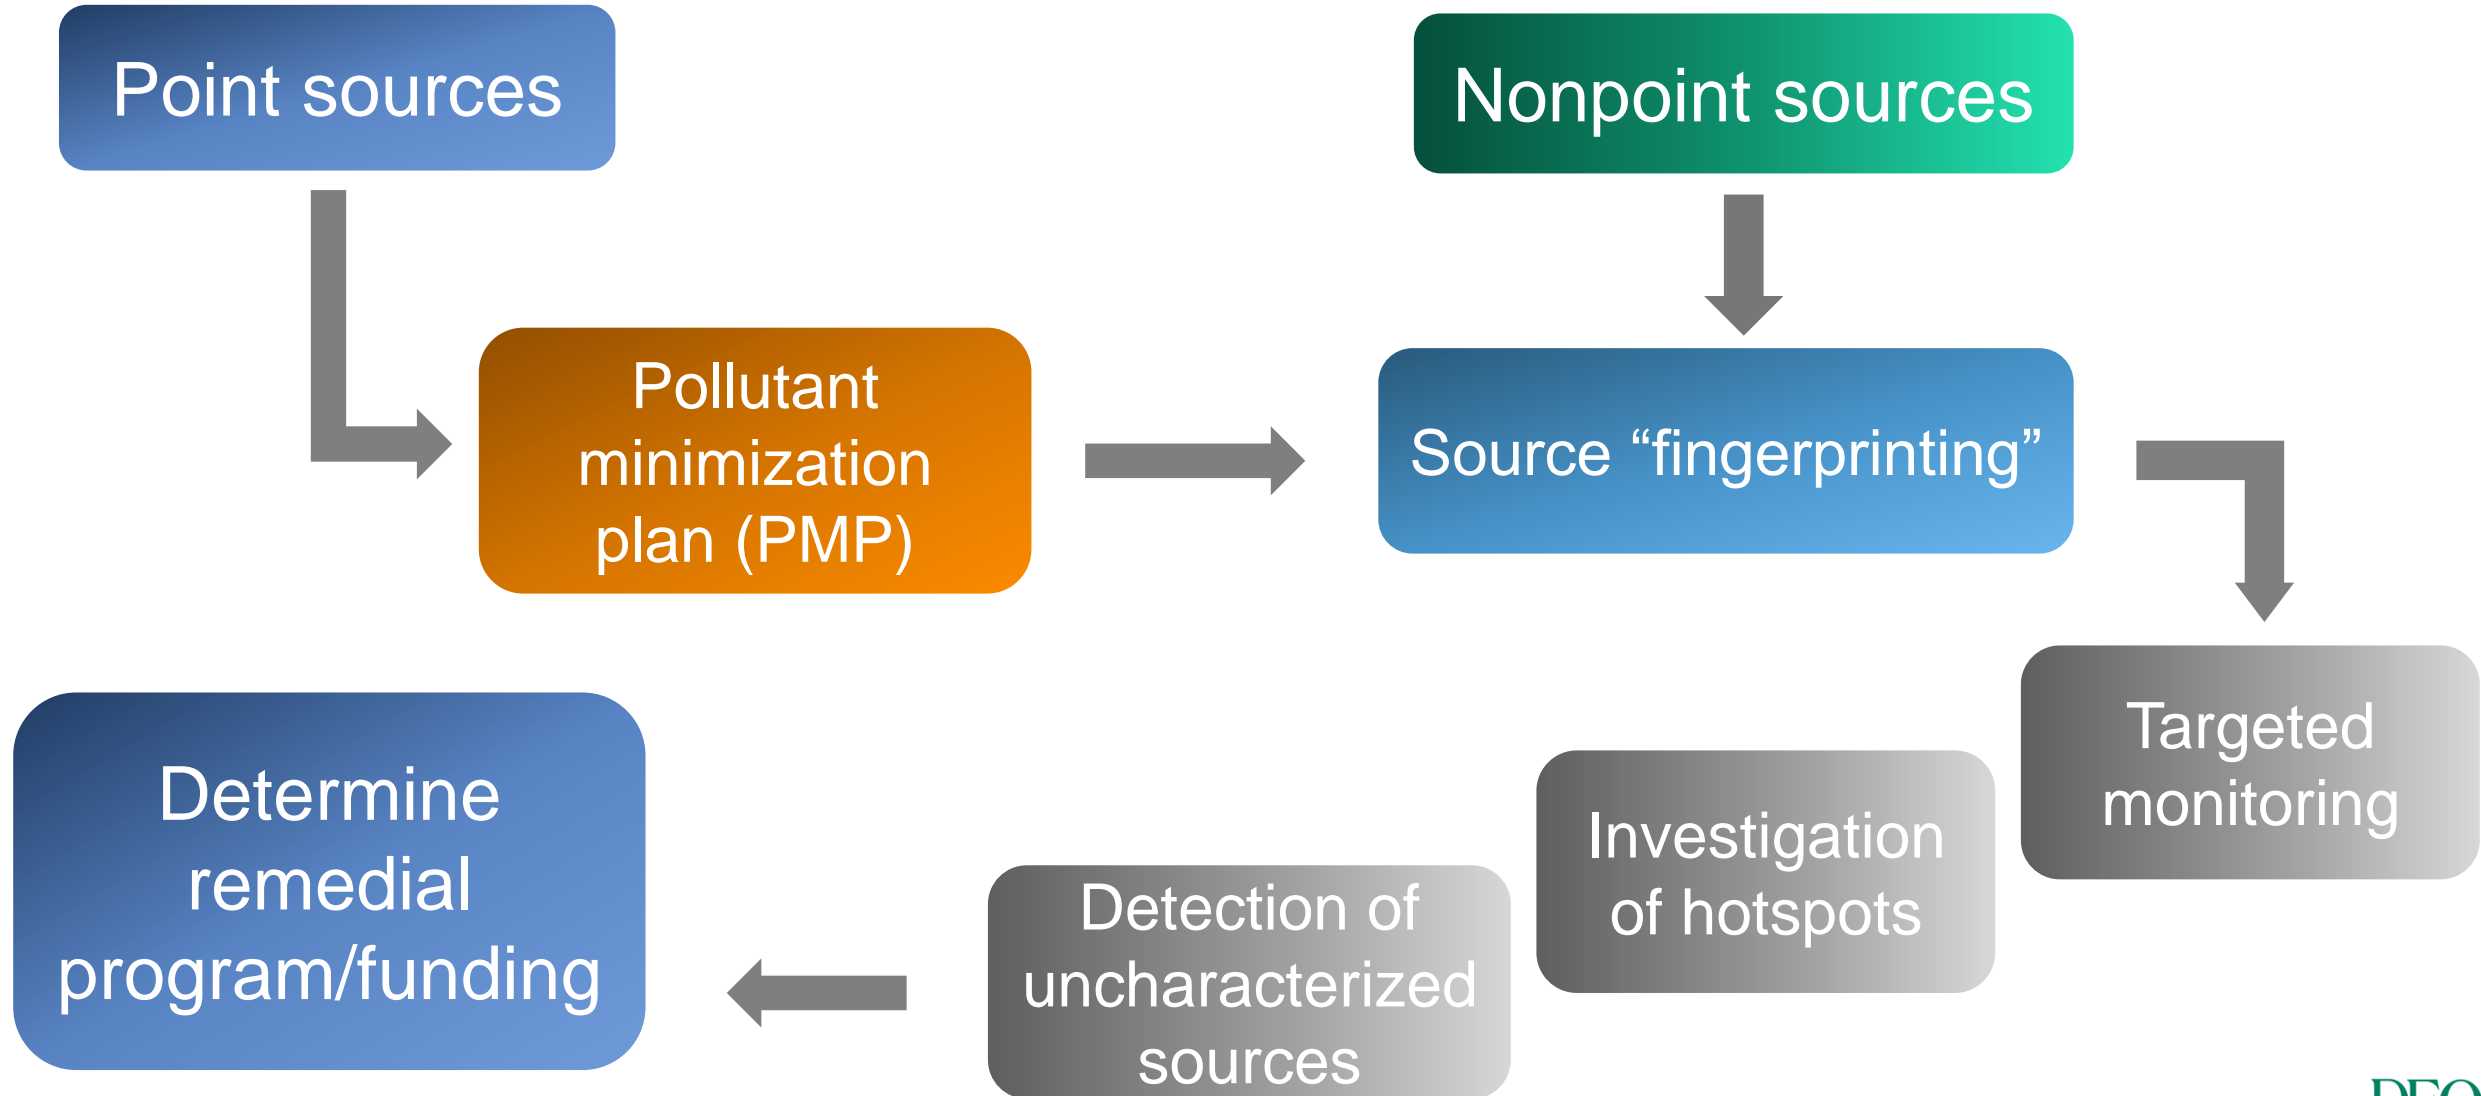

TMDL  
Endpoint = 52  
pg/L (Applied  
as a Long-  
Term Average)

- Surface Load-regulated SW
- Surface Load-Unregulated SW
- Spills
- Permitted
- CSO
- Known Contam. sites
- Atmospheric Deposition
- Streambed sediment
- Upstream Sources

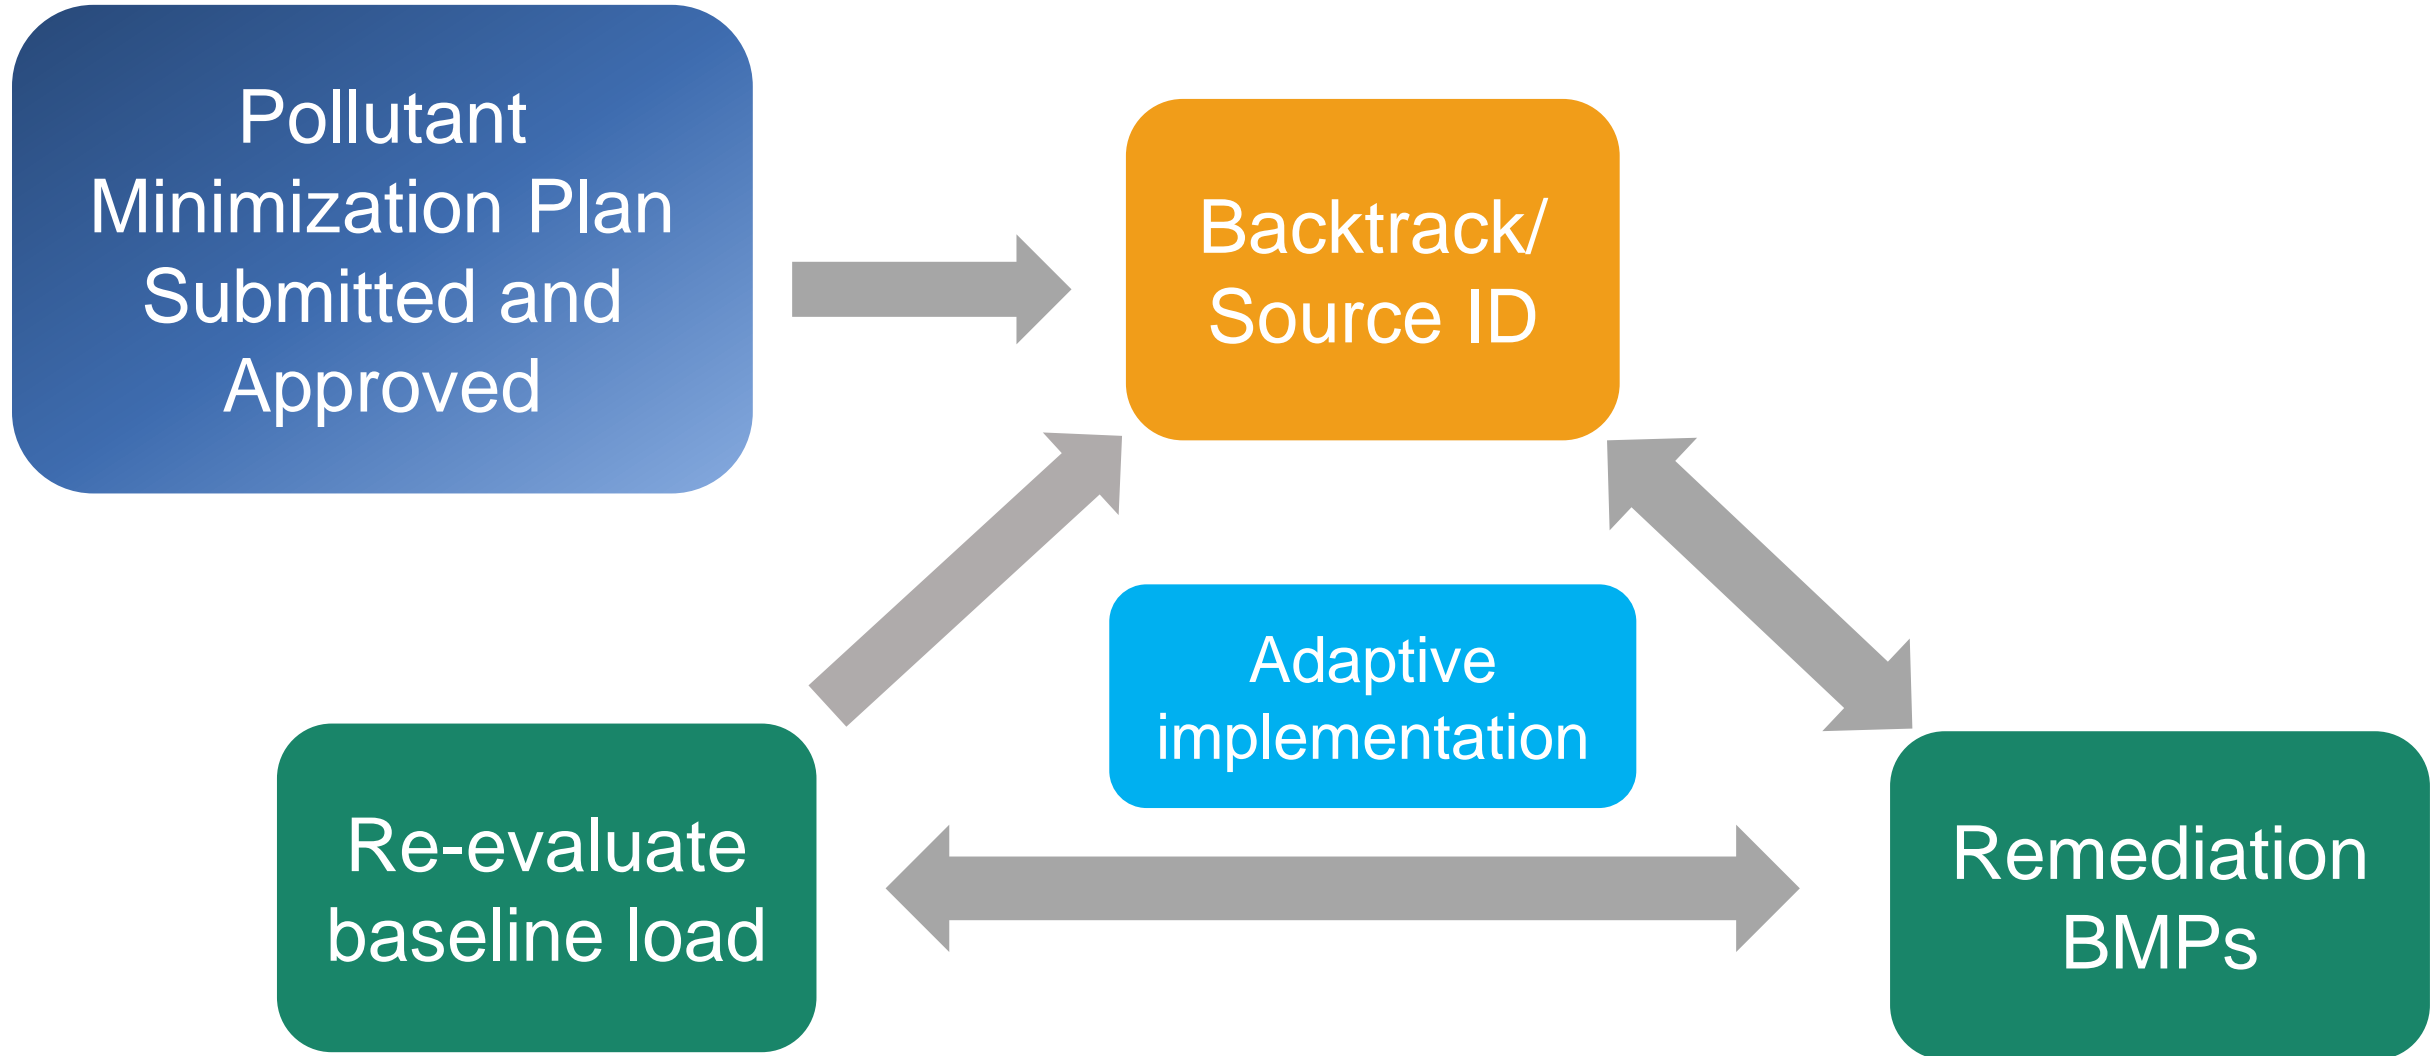

PCB load (mg/yr)

# TMDL Implementation Process

# Developing a Pollutant Minimization Plan for PCBs

# Next Steps

- DEQ is seeking comments on this draft study from **2/15/2024 – 3/18/2024**
- Complete an economic analysis of proposed WLA regulations
- The WLAs from the TMDL equation are incorporated into the Water Quality Management Regulation (9 VAC 25-720-60)

# Questions

- TMDL Development Team
