Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A01R-01-BAC** **Piney Run**

Cause Location: Begins at the mouth of an unnamed pond on Piney Run and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available for the 2024 assessment (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2022 assessment: The recreation use is assessed as impaired based on E. coli data from DEQ station 1APIA001.80 at Route 671 (Harpers Ferry Rd). There were two or more STV exceedances in at least one 90-day period with <10 samples.

The Piney Run bacteria TMDL (Eq ID POL0023) was approved by the EPA on 07/06/2004 (Fed ID 24398). The SWCB approved the TMDL on 12/02/2004.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A01R-01-BEN** Dutchman Creek

Cause Location: Begins at the confluence with an unnamed tributary to Dutchman Creek at rivermile 2.9 and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: 2022 Assessment: A total of four biological monitoring events in 2015 and 2016 at DEQ station 1ADUT000.62 at Route 674 and a total of three biological monitoring events in 2015 and 2016 at DEQ station 1ADUT002.72 at Route 673 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Potomac and Shenandoah River Basins

Cause Group Code: **A02R-01-BAC** **Catoctin Creek**

Cause Location: Begins at the confluence with Milltown Creek, approximately 1.3 rivermiles downstream of Route 673, and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available from DEQ station 1ACAX004.57 at Route 663 for the 2024 assessment (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2022 assessment: There were two or more STV exceedances in at least one 90-day period with <10 samples.

The Catoctin Creek bacteria TMDL (Eq ID POL0169) was approved by the EPA on 05/31/2002 (Fed ID 24399). The SWCB approved the TMDL on 06/17/2004. A bacteria TMDL Implementation Plan for the Catoctin Creek watershed (ID 96) was approved by the EPA on 01/10/2005.

Potomac and Shenandoah River Basins

Cause Group Code: A02R-02-BAC North Fork Catoctin Creek

Cause Location: Begins at the confluence of an unnamed tributary to North Fork Catoctin Creek, approximately 0.75 rivermile upstream from Route 719 near Hillsboro, and continues downstream until the confluence with Catoctin Creek.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2018 Assessment: E. coli bacteria criterion excursions (9 of 12 samples - 75.0%) at DEQ station 1ANOC000.42 at Route 681.

2018 Assessment: E. coli bacteria criterion excursions (5 of 11 samples - 45.5%) at DEQ station 1ANOC004.38 at Route 287.

2010 Assessment: E. coli bacteria criterion excursions (4 of 10 samples - 40.0%) at DEQ station 1ANOC009.37 at Route 812.

The Catoctin Creek bacteria TMDL for the North Fork Catoctin Creek watershed (Eq ID POL0166) was approved by the EPA on 05/31/2002 (Fed ID 24402). The SWCB approved the TMDL on 06/17/2004. The Catoctin Creek bacteria TMDL Implementation Plan for the North Fork Catoctin Creek watershed (ID 94) was approved by the EPA on 01/10/2005.

Potomac and Shenandoah River Basins

Cause Group Code: **A02R-04-BEN** North Fork Catoctin Creek

Cause Location: Begins at the confluence of an unnamed tributary to North Fork Catoctin Creek, approximately 0.75 rivermile upstream from Route 719 near Hillsboro, and continues downstream 2.45 rivermiles to an unnamed impoundment.

Cause City/County: Loudoun County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4C

Cause Description: One biological monitoring event in 2014 at DEQ station 1ANOC009.37 at Route 812 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

A new TMDL is not required for this impaired segment of North Fork Catoctin Creek because the Benthic TMDL Development Stressor Analysis Report for North Fork Catoctin Creek (09/15/2015) determined that this impairment is primarily due to low-flow conditions, and recommended that this segment be re-classified as Category 4C because the impairment is not caused by a pollutant.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A02R_NOC03A02 / North Fork Catoctin Creek / Segment begins at the confluence of an unnamed tributary to North Fork Catoctin Creek, approximately 0.75 rivermile upstream from Route 719 near Hillsboro, and continues downstream 2.45 rivermiles to an unnamed impoundment.	4C	Benthic Macroinvertebrates Bioassessments	NA	NA	2.54

Potomac and Shenandoah River Basins

Cause Group Code: **A02R-05-BAC** Milltown Creek

Cause Location: Begins at the confluence with an unnamed tributary to Milltown Creek, approximately 1.1 rivermile upstream from Route 681 near Milltown, and continues downstream until the confluence with Catoctin Creek.

Cause City/County: Loudoun County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available from DEQ station 1AMIH001.98 at Route 673 for the 2024 assessment (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2018 assessment: Sufficient excursions from the maximum E. coli bacteria criterion (4 of 10 samples - 40.0%) were recorded at DEQ station 1AMIH001.98 at Route 673 to assess this stream segment as not supporting the recreation use.

A new TMDL is not required for this impaired segment of Milltown Creek because the downstream Catoctin Creek bacteria TMDL (Fed ID 24399, 05/31/2002) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0169). A bacteria TMDL Implementation Plan for the Catoctin Creek watershed (ID 96) was approved by the EPA on 01/10/2005.

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A03R-03-BEN** **Big Spring Creek**

Cause Location: Begins at the headwaters of Big Spring Creek and continues downstream until the confluence with the Potomac River.

Cause City/County: Loudoun County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: 2022 Assessment: A total of three biological monitoring events in 2015 and 2016 at DEQ station 1ABSC000.45 at Twin Maple Lane resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A03R_BSC01A06 / Big Spring Creek / Segment begins at the headwaters of Big Spring Creek and continues downstream until the confluence with the Potomac River. Contains DGIF/DWR Class iii water (Big Spring downstream to Potomac River).	5A	Benthic Macroinvertebrates Bioassessments	2018	L	4.49

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A; Fecal Coliform/4A

Cause Description: 2022 Assessment: There were two or more STV exceedances in at least one 90-day period with <10 samples at DEQ station 1ASYC002.03 at Route 652 (Grant Lane).

2004 Assessment: Fecal coliform bacteria criterion excursions (3 of 5 samples - 60.0%) at DEQ station 1ASYC004.93 at Route 621.

2006 Assessment: Fecal coliform bacteria criterion excursions (3 of 7 samples - 42.8%) at DEQ station 1ASYC007.43 at Route 797.

The Goose Creek bacteria TMDL for the Sycolin Creek watershed (Eq ID POL0069) was approved by the EPA on 05/01/2003 (Fed ID 24408). The SWCB approved the TMDL on 06/17/2004.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A08R_SYC02A02 / Sycolin Creek / Segment begins at the confluence with South Fork Sycolin Creek and continues downstream until the confluence with an unnamed tributary to Sycolin Creek, approximately 0.23 rivermile upstream from Route 643.	4A	Fecal Coliform	1998	L	4.01
VAN-A08R_SYC03A02 / Sycolin Creek / Segment begins at the headwaters of Sycolin Creek and continues downstream until the confluence with South Fork Sycolin Creek.	4A	Fecal Coliform	1998	L	3.99

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A12E-01-PCB Potomac River Embayments (FOU downstream until POM)**

Cause Location: Includes the tidal portions of the following tributaries and embayments from the I-395 bridge (above the Woodrow Wilson Bridge) to the Potomac River Bridge at Route 301: Fourmile Run, Hunting Creek, Little Hunting Creek, Pohick Creek, Accotink Creek, Occoquan River, Neabsco Creek, Powells Creek, Quantico Creek, Chopawamsic Creek, Aquia Creek, and Potomac Creek.

Cause City/County: Alexandria; Arlington County; Fairfax County; King George County; Prince William County; Stafford County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A; Polychlorinated biphenyls (PCBs)/4A

Cause Description: The fish consumption use is impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 4/19/99 and modified 12/13/04 and 10/7/09, limits consumption of bullhead catfish, channel catfish less than 18 in long, largemouth bass, anadromous (coastal) striped bass, sunfish species, smallmouth bass, white catfish, white perch, gizzard shad, and yellow perch to no more than two meals per month. The advisory also bans the consumption of American eel, carp, and channel catfish greater than 18 in long.

The following exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for PCBs in fish tissue have been recorded in current and past assessment cycles: 7 in 5 species (largemouth bass, carp, channel catfish, gizzard shad, blue catfish) in 2015 at 1AFOU000.45; 6 in 6 species (largemouth bass, carp, channel catfish, gizzard shad, white catfish, blue catfish) in 2015 at 1AHUT000.01; 4 in 3 species (carp, channel catfish, blue catfish) in 2015 at 1ALIF000.01; 10 in 7 species (largemouth bass, carp, channel catfish, bluegill sunfish, brown bullhead catfish, northern snakehead, gizzard shad) in 2015 at 1ANEA000.57; 8 in 7 species (largemouth bass, bluegill sunfish, channel catfish, blue catfish, brown bullhead catfish, carp, northern snakehead) collected in 2015 at 1APOH002.27; 18 in 9 species (largemouth bass, yellow perch, channel catfish, carp, brown bullhead catfish, American eel, white perch, gizzard shad, bluegill sunfish) in 2008 at 1ACHO000.90 (2014IR); 9 in 5 species (largemouth bass, channel catfish, blue catfish, brown bullhead catfish, carp) in 2015 at 1APOW001.11; 10 in 6 species (bluegill sunfish, channel catfish, blue catfish, white catfish, gizzard shad, northern snakehead) in 2015 and 1 in 1 species (northern snakehead) in 2016 at 1AAUA003.71; 10 in 5 species (blue catfish, channel catfish, carp, gizzard shad, northern snakehead) in 2015 at 1APOM001.04; 7 in 7 species (brown bullhead catfish, carp, channel catfish, gizzard shad, largemouth bass, pumpkinseed sunfish and yellow perch) in 2005 (2012IR), 5 in 1 species (American shad) in 2006 (2012IR), and 3 in 3 species (largemouth bass, gizzard shad, bluegill sunfish) in 2008 (2014IR) at 1AACO001.78; 3 in 3 species (largemouth bass, bullhead catfish, sunfish) in 1996 at 1AQUA002.76 (2002IR); 1 in 1 species (northern snakehead) in 2019 at 1AQUA000.85; 7 in 4 species (largemouth bass, carp, channel catfish, gizzard shad) in 2008 at 1AQUA001.00 (2014IR); 9 in 7 species (striped bass, largemouth bass, bluegill sunfish, channel catfish, flathead catfish, white catfish, carp) in 2015, 1 in 1 species (northern snakehead) in 2016, 2 in 1 species (northern snakehead) in 2018, and 1 in 1 species (northern snakehead) in 2019 at 1AOCC002.47; 1 in 1 species (northern snakehead) in 2017 at 1AOCC006.71; and 1 in 1 sp. (northern snakehead) in 2017 at 1ADOU001.02.

The Tidal Potomac River PCB TMDL was approved by EPA 10/31/07 and by SWCB 4/11/08

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A12E_FOU01A00 / Four Mile Run / Segment includes the tidal waters of Four Mile Run; from rivermile 1.46 downstream until the confluence with the Potomac River, at the state line. Portion of CBP segment POTTF.	4A	PCBs in Fish Tissue	2002	L	0.050

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2024

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: A12E-02-BAC Potomac River

Cause Location: All tidal Virginia water adjacent to Alexandria, from Second Street to King Street.

Cause City/County: Alexandria

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4B

Cause Description: The recreation use is assessed as impaired based on Level III E. coli data from citizen station 1APOT-8-PR. The geomean was exceeded in at least one 90-day period.

This impairment is categorized as 4B due to the City of Alexandria Combined Sewer System Long Term Control Plan.

Potomac and Shenandoah River Basins

Cause Group Code: **A12R-01-BAC** **Four Mile Run**

Cause Location: Begins at the headwaters of Four Mile Run and continues downstream until rivermile 1.46, approximately 0.27 rivermile upstream from the Arlington Ridge Road bridge. Segment includes non-tidal waters of Four Mile Run.

Cause City/County: Alexandria; Arlington County; Fairfax County; Falls Church

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: There were two or more STV exceedances in at least one 90-day period with <10 samples at DEQ station 1AFOU001.92 at Route 120 (W. Glebe Rd) and there were two or more STV exceedances in at least one 90-day period with <10 samples at DEQ station 1AFOU005.16 above bike trail bridge in Glencarlyn Park.

The Four Mile Run bacteria TMDL (Eq ID POL0071) was approved by the EPA on 05/31/2002 (Fed ID 26433). The SWCB approved the TMDL on 06/17/2004. The Four Mile Run bacteria TMDL Implementation Plan (ID 38) was completed on 03/31/2004.

Potomac and Shenandoah River Basins

Cause Group Code: **A12R-01-PCB** **Pimmit Run**

Cause Location: Includes the following tributaries between the Virginia/Maryland state line near the Route 340 bridge (Loudoun County) to the I-395 bridge in Arlington County (above the Woodrow Wilson Bridge): Pimmit Run up to the Route 309 bridge.

Cause City/County: Arlington County; Fairfax County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/04, limits American eel consumption to no more than two meals per month.

The Tidal Potomac River PCB TMDL was approved by the EPA on 10/31/2007 (Fed ID 35018). The SWCB approved the TMDL on 04/11/2008.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A12R_PIM01A00 / Pimmit Run / Segment begins at the confluence with Little Pimmit Run and continues downstream until the confluence with the Potomac River.	4A	PCBs in Fish Tissue	2006	L	1.65
VAN-A12R_PIM02A00 / Pimmit Run / Segment begins at the Route 309 bridge crossing and continues downstream until the confluence with Little Pimmit Run.	4A	PCBs in Fish Tissue	2006	L	2.77

Potomac and Shenandoah River Basins

Cause Group Code: [A12R-02-BAC](#) **Pimmit Run**

Cause Location: Begins at the headwaters of Pimmit Run, upstream from Route 7, and continues downstream until the confluence with the Potomac River.

Cause City/County: Arlington County; Fairfax County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available from DEQ station 1APIM000.15 for the 2024 assessment (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2022 assessment: There were two or more STV exceedances in at least one 90-day period with <10 samples.

2014 Assessment: E. coli bacteria criterion excursions (4 of 11 samples - 36.4%) at DEQ station 1APIM001.89 at Ranleigh Road.

2016 Assessment: E. coli bacteria criterion excursions (3 of 9 samples - 33.3%) at DEQ station 1APIM004.16 at Route 309.

The Tributaries to the Potomac River bacteria TMDL for the Pimmit Run watershed (Eq ID 784) was approved by the EPA on 09/26/2013 (Fed ID 53776). The SWCB approved the TMDL on 04/04/2014.

Use(s): Aquatic Life; Wildlife

Causes(s)/VA Category: Chloride/4A

Cause Description: 2022 Assessment: Two exceedances of the chronic water quality criterion were recorded within a three-year period at DEQ station 1aLOE000.26 at Route 620.

The Accotink Creek Chloride TMDL for the Long Branch watershed (Eq ID 2119) was approved by the EPA on 05/23/2018 (Fed ID 11403). The SWCD approved the TMDL on 04/16/2018.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A15R_LOE01A02 / Long Branch / Segment begins at the confluence with an unnamed tributary to Long Branch, at the Route 651 (Guinea Road) bridge, and continues downstream until the confluence with Accotink Creek, just below Braddock Road.	4A	Chloride	2018	L	2.38

Cause Group Code: A15R-04-BEN **Accotink Creek**

Cause Location: Begins at the headwaters of Accotink Creek and continues downstream until the start of Lake Accotink.

Cause City/County: Fairfax; Fairfax County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: 2022 assessment: One biological monitoring event in 2016 at DEQ station 1AACO014.57 at Route 620 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

2012 Assessment: EPA biological monitoring events in 2005 and 2006 at stations 1AACO-A-EPA, 1AACO-B-EPA, 1AACO-C-EPA, and 1AACO-D-EPA resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

The Accotink Creek Chloride (Eq ID 2139) and Sediment (Eq ID 2162) TMDLs for the Upper Accotink Creek watershed were approved by the EPA on 05/23/2018 (Fed IDs 11403 and 11423). The SWCD approved the TMDLs on 04/16/2018. The Salt Management Strategy (SaMS) has also been developed and is being implemented via the Northern Virginia Regional Commission (<https://www.novaregion.org/1399/Northern-Virginia-Salt-Management-Strate>).

Cause Group Code: **A15R-06-BAC** Long Branch

Cause Location: Begins at the headwaters of Long Branch and continues downstream until the confluence with Accotink Creek, at rivermile 4.41.

Cause City/County: Fairfax County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available for the 2024 assessment (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2018 assessment: Sufficient excursions from the maximum E. coli bacteria criterion (3 of 11 samples - 27.3%) were recorded at DEQ station 1ALOA000.17 at Route 611.

A new TMDL is not required for this impaired segment of Long Branch because the downstream Lower Accotink Creek bacteria TMDL (Fed ID 35782, 12/18/2008) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0556).

Cause Group Code: **A17R-04-BAC** Turkey Run

Cause Location: Begins at the confluence with an unnamed tributary to Turkey Run, approximately 0.25 rivermile upstream from the Route 602 crossing, and continues downstream until the confluence with Cedar Run.

Cause City/County: Fauquier County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2020 Assessment: E. coli bacteria criterion excursions (2 of 12 samples - 16.7%) at DEQ station 1ATUK003.37 at Route 602.

A new TMDL is not required for this impaired segment of Turkey Run because the downstream Cedar Run and Licking Run bacteria TMDL (Fed ID 24411, 07/06/2004) included modeling, source identification, and reductions that covered the entire Cedar Run watershed (Eq ID POL0012).

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: [A22R-02-BAC](#) **Elklick Run**

Cause Location: Begins at the confluence with an unnamed tributary to Elklick Run, approximately 0.65 rivermile downstream from the Route 620 crossing, and continues downstream until the confluence with Cub Run.

Cause City/County: Fairfax County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2020 Assessment: E. coli bacteria criterion excursions (2 of 13 samples - 15.4%) at DEQ station 1AELC001.39 at Route 609.

A new TMDL is not required for this impaired segment of Elklick Run because the downstream Occoquan River bacteria TMDL (Fed ID 32110, 11/15/2006) included modeling, source identification, and reductions that covered the entire Bull Run watershed (Eq ID POL0411).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A22R_ELC01A04 / Elklick Run / Segment begins at the confluence with an unnamed tributary to Elklick Run at the Fairfax County boundary, and continues downstream until the confluence with Cub Run.	4A	Escherichia coli (E. coli)	2006	L	2.53

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A22R-02-BEN** **Big Rocky Run**

Cause Location: Begins at the confluence with an unnamed tributary to Big Rocky Run, at approximately rivermile 4.03, and continues downstream until the confluence with Cub Run.

Cause City/County: Fairfax County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Four monitoring events in 2018 and 2019 at DEQ station 1ABIR000.76 at Route 29/211 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A22R_BIR01A02 / Big Rocky Run / Segment begins at the confluence with an unnamed tributary to Big Rocky Run, at approximately rivermile 4.03, and continues downstream until the confluence with Cub Run.	5A	Benthic Macroinvertebrates Bioassessments	2010	L	4.35

Potomac and Shenandoah River Basins

Cause Group Code: A24L-01-PCB **Occoquan Reservoir**

Cause Location: Segment includes the upper Bull Run arm of the Occoquan Reservoir; extending from rivermile 2.89 on Bull Run downstream until the crossing of the Route 612 (Yates Ford Road) bridge.

Cause City/County: Fairfax County; Prince William County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/5A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/04 and modified 07/27/05, limits consumption of carp and channel catfish to no more than two meals per month. The affected area includes Bull Run near Manassas Park from the I-66 bridge downstream approximately fourteen miles to the Route 612 (Yates Ford Road) bridge.

Additionally, six previous exceedances of the water quality criterion based fish tissue value (TV) of 18 ppb for PCBs were recorded in two species of fish (channel catfish and carp) sampled in 2015 at DEQ station 1ABUL001.57.

Potomac and Shenandoah River Basins

Cause Group Code: **A26R-02-BAC** Powells Creek

Cause Location: Begins at the confluence with an unnamed tributary to Powells Creek, at rivermile 12.77 and continues downstream until the end of the free-flowing waters of Powells Creek, however does not include Lake Montclair and the first 0.2 rivermiles below the lake.

Cause City/County: Prince William County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: 2018 Assessment: E. coli bacteria criterion excursions at DEQ station 1APOW003.11 at Route 1 (3 of 13 samples - 23.1%) and at DEQ station 1APOW009.99 at Route 643 (4 of 11 samples - 36.4%).

The Potomac River Tributaries bacteria TMDL for the Powells Creek watershed (Eq ID 766) was approved by the EPA on 09/26/2013 (Fed ID 53801). The SWCB approved the TMDL on 04/04/2014.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A26R_POW01A00 / Powells Creek / Segment begins approximately 0.2 rivermiles below Lake Montclair and continues downstream until the end of the free-flowing waters of Powells Creek.	4A	Escherichia coli (E. coli)	2006	L	5.37
VAN-A26R_POW02A02 / Powells Creek / Segment begins at the confluence with an unnamed tributary to Powells Creek, at rivermile 12.77, and continues downstream until the beginning of Lake Montclair.	4A	Escherichia coli (E. coli)	2014	L	3.91

Virginia Department of Environmental Quality

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: A26R-03-BAC Quantico Creek

Cause Location: Begins at the confluence with South Fork Quantico Creek, approximately 0.75 rivermile upstream from I-95, and continues downstream until the start of the tidal waters of Quantico Bay.

Cause City/County: Prince William County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: Insufficient E. coli data were available for the 2024 assessment from DEQ station 1AQUA004.46 (there was one STV exceedance in one or multiple 90-day periods but there were insufficient data to analyze geomean). The following information is carried over from the 2020 assessment: Sufficient excursions from the maximum E. coli bacteria criterion (11 of 35 samples - 31.4%) were recorded at DEQ station 1AQUA004.46 at Route 1 Business to assess this stream segment as not supporting the recreation use.

The Potomac River Tributaries bacteria TMDL for the Powells Creek watershed (Eq ID 768) was approved by the EPA on 09/26/2013 (Fed ID 53797). The SWCB approved the TMDL on 04/04/2014.

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A29R-02-BEN** **Potomac Run**

Cause Location: Begins at the headwaters of Potomac Run and continues downstream until the confluence with Long Branch.

Cause City/County: Stafford County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/5A

Cause Description: Two biological monitoring events in 2018 at DEQ station 1APOR000.52 at approximately 0.1 mile upstream from Route 648 resulted in a VSCI assessment that indicates an impaired macroinvertebrate community.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A30E-01-BAC** Williams Creek

Cause Location: Begins at the head of tide of Williams Creek and continues downstream until the extent of the Section C area described in VDH Notice and Description of Shellfish Area Condemnation Number 001A-36, Upper Machodoc Creek, effective May 15, 2012.

Cause City/County: King George County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: 2014 Assessment: Enterococcus bacteria criterion excursions (3 of 11 samples - 27.3%) at DEQ station 1AWLL001.30 at Route 206 and excursions (4 of 6 samples - 66.7%) at DEQ station 1AWLL002.21 at Route 301.

A new TMDL is not required for this impaired segment of Williams Creek because the Upper Machodoc Creek Watershed bacteria TMDL (Fed ID 36032, 12/18/2008) included modeling, source identification, and reductions that covered the entire watershed (Eq ID POL0443).

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAN-A30E_WLL01B10 / Williams Creek / The downstream portion of the boundary of the admin condemnation area described in VDH Notice and Description of Shellfish Area Condemnation Number 001A-36, Upper Machodoc Creek, Section C, effective May 15, 2022. Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A30E-01-EBEN** **Upper Machodoc Creek**

Cause Location: Upstream portion of Upper Machodoc Creek described in VDH Shellfish Area Condemnation #001A-36, Section D, effective June 15, 2019, wherein the administrative condemnation applies.

Cause City/County: King George County

Use(s): Aquatic Life

Causes(s)/VA Category: Estuarine Bioassessments/5A

Cause Description: Coastal 2000 weight of evidence analysis at station 1aUMC003.09 (sampled 2019), utilizing bulk chemical data, toxicity test data, and an evaluation of benthic community conditions, resulted in an impaired determination for the aquatic life use; there was strong evidence for pollution-induced degradation.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A30E-01-PCB** Coan River, Monroe Creek, Upper Machodoc Creek

Cause Location: Includes the tidal portions of the following tributaries from the Potomac River Bridge at Route 301 to the mouth of the Potomac River near Smith Point: Upper Machodoc Creek, Monroe Creek, and Coan River.

Cause City/County: King George County; Northumberland County; Westmoreland County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: The fish consumption use is categorized as impaired due to a Virginia Department of Health PCB fish consumption advisory. The advisory, dated 12/13/2004, limits consumption of channel catfish, gizzard shad, and white perch to no more than two meals per month.

Ten exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in six species of fish (channel catfish, gizzard shad, white perch, mummichog, spot, and croaker) sampled in 2004 and three exceedances in three species of fish (blue catfish, white perch, and gizzard shad) sampled in 2018 at DEQ station 1aUMC001.36. Five exceedances of the water quality criterion based fish tissue value (TV) of 18 parts per billion (ppb) for polychlorinated biphenyls (PCBs) in fish tissue were recorded in four species of fish (channel catfish, gizzard shad, spot, and bluefish) sampled in 2004 and in one species of fish (gizzard shad) sampled in 2018 at DEQ station 1aUMC004.43.

The Tidal Potomac River PCB TMDL for the Upper Machodoc Creek watershed (Eq ID POL0483) was approved by the EPA on 10/31/2007 (Fed ID 35068). The SWCB approved the TMDL on 04/11/2008.

Monroe Creek was assessed as not supporting of the Fish Consumption Use in the 2004 cycle based on exceedances of the tissue screening level for PCBs in white perch and gizzard shad in 2001 at 1AMON002.49. Additional sampling at 1AMON002.60 in 2008 indicated PCBs in white perch, channel catfish, blue crab and gizzard shad. VDH issued a Fish Consumption Advisory for Monroe Creek on 12/13/2004 due to PCB contamination in gizzard shad, white perch, and channel catfish. The “Total Maximum Daily Loads of Polychlorinated Biphenyls (PCBs) for Tidal Portions of the Potomac and Anacostia Rivers in the District of Columbia, Maryland, and Virginia” report was approved on 10/30/2007 and by the SWCB on 4/11/2007. The segment is considered a Category 4A water. Monitoring in 2018 at station 1AMON002.49 indicated continued PCB exceedances in blue catfish, blue crab, gizzard shad, and striped bass.

The Coan River was assessed as impaired of the Fish Consumption Use in the 2006 cycle due to a VDH Fish Consumption Advisory (12/13/2004) for PCBs in gizzard shad, white perch, and channel catfish. This was influenced by an exceedance of the fish tissue value in one sp. in 2004 at 1ACOA04.24. The impairment was confirmed with exceedances of the Human Health criteria in SPMD samples in 2005. The TMDL was completed as a part of the Potomac River Basin PCB TMDL, which was approved by the EPA on 10/30/2007 and by the SWCB on 4/11/2008. The segment is considered a Category 4A water. Additional monitoring indicated exceedance of the fish tissue value in gizzard shad in 2018 at 1ACOA004.24.

The “Total Maximum Daily Loads of Polychlorinated Biphenyls (PCBs) for Tidal Portions of the Potomac and Anacostia Rivers in the District of Columbia, Maryland, and Virginia” report was approved on 10/30/2007 and by the SWCB on 4/11/2008.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A30E-03-SF** Upper Machodoc Creek

Cause Location: The downstream portion of UMC within the boundaries described in VDH Shellfish Area Condemnation #001A-36, Section D, effective June 15, 2019, and continuing until the open embayment of Upper Machodoc Creek.

Cause City/County: King George County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: The shellfishing use is categorized as impaired due to Section D of the Virginia Department of Health Notice and Description of Shellfish Area Condemnation Number 001A-036, Upper Machodoc Creek, dated May 15, 2022: “It shall be unlawful for any person, firm, or corporation to take shellfish from these areas for any purpose, except by permit granted by the Marine Resources Commission, as provided in §28.2-810 of the Code of Virginia.”

The Upper Machodoc Creek Watershed (Eq ID POL0444) shellfish bacteria TMDL was approved by the EPA on 12/18/2008 (Fed ID 36028). The SWCB approved the TMDL on 07/27/2009.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 001-008A, 5/15/2022

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: In the 1998 cycle, a portion of Rosier Creek was impaired due to shellfish condemnation 088A, 7/1/1998. The Shellfish TMDL for that portion was developed during the 2008 cycle. The TMDL was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

In the 2020 cycle, the condemnation shrank considerably and became smaller than the TMDL area (VDH-DSS Shellfish Condemnation 001-088A, 5/30/2018). The expansion was delisted and the lower portion of the TMDL area was partially delisted (Portion of condemnation 001-008S8, 5/30/2018). It was seasonally condemned so was Category 2C/2B.

In the 2022 cycle, the condemnation expanded again and the downstream portion was relisted. It is larger than the TMDL area. The expansion is considered nested (Category 4A.)

In the 2024 cycle, the condemnation shrank slightly, but remains larger than the TMDL extent.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-A31E_ROS01A08 / Rosier Creek / Portion of VDH condemnation notice 001-088A, 5/15/2022 not included in the 2006 TMDL. Size reduced in the 2024 cycle. POTMH	4A	Fecal Coliform	2022	L	0.184
VAP-A31E_ROS01A98 / Rosier Creek / Described in VDH condemnation notice 088A, 7/1/1998. POTMH	4A	Fecal Coliform	1998	L	0.206

Cause Group Code: **A31E-03-SF** Monroe Creek

Cause Location: The portion of VDH Shellfish Condemnation 002-001A, 5/15/2022 which is not included in the administrative condemnation.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH-DSS Shellfish Condemnation 002-001A, 5/15/2022 that is not administratively condemned

The area was seasonally condemned in the 2010 cycle, however condemnation A expanded in the 2014 cycle. The Shellfish TMDL for Monroe Creek was approved by the EPA on 6/8/2006 and by the SWCB on 7/27/2009. The area was addressed by the TMDL; therefore, it was considered Category 4A.

Condemnation A shrank slightly in the 2016 cycle and section M2 was split off; it was considered partially delisted (Cat. 2C.)

The lower portion of the condemnation converted to seasonally condemned in the 2020 cycle (002-001S9, 5/30/2018) and was partially delisted (Category 2C/2B).

It expanded again in the 2022 cycle.

Cause Location: As described in VDH condemnation 002-001D, 5/30/2018

Cause City/County: Westmoreland County

Use(s): Aquatic Life

Causes(s)/VA Category: pH/4C

Cause Description: During the 2012 cycle, the upper portion of Monroe Creek was impaired of the Aquatic Life Use due to a pH violation rate of 10/16 at 1AMRC002.81, which is located at Rt. 658.

A Swampwaters Determination Report was completed during the 2014 cycle. The report attributed the pH exceedances to natural conditions and the impairment is considered Category 4C.

Potomac and Shenandoah River Basins

Cause Group Code: A31E-06-BAC **Mattox Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnations 002-001B, 5/15/2022

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: The segment was initially listed in 1996 based on excessive fecal coliform standards at the Route 205 bridge (1AMAO004.08). The segment was adjusted during the 2006 cycle to be coincident with VDH-DSS Shellfish Condemnation 001B (11/15/2004) and the Recreation Use impairment switched to Enterococci due to exceedances at 1AMAO004.08.

During the 2008 and 2010 cycles, the segment remained impaired due to Enterococci exceedance at 1AMAO001.36 and at 1AMAO004.08. The exceedance rate was 5/12 during the 2014 cycle at 1AMAO004.08.

The bacterial TMDL for the Mattox Creek Watershed was approved by the EPA on 12/4/2006 and by the SWCB on 7/31/2008; therefore, the segment is considered Category 4A for the Recreation Use.

The impairment length has been adjusted to remain coincident with Mattox Creek shellfish condemnations.

New bacteria criteria were implemented in the 2022 cycle. There is insufficient information to assess the new criteria; therefore, the impairment is carried over.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A31E-06-SF** **Mattox Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 002-001B, 5/15/2022

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 002-001B, 5/15/2022

The segment has been considered impaired of the Shellfish Consumption Use since 1996. The Shellfish TMDL for the Mattox Creek Watershed was developed during the 2008 cycle and was approved by the EPA on 12/4/2006 and the water was considered Category 4A for the Shellfish Use.

However, during the 2010 cycle it was determined that the upper portion of the section was administratively closed as a buffer for the Outdoor World Harborview STP. Therefore the use was considered removed for the upper portion and it was partially delisted.

The advisory was shortened during the 2012 cycle and split into 002-001B and 002-001C, 8/30/2010. It expanded and re-merged in the 2014 cycle. It slightly shrunk and expanded in 2016 and 2018. It shrank further and the condemnation split in the 2020 cycle (portion of VDH-DSS condemnation 002-001B, 5/30/2018 & 002-001C, 5/30/2018).

In the 2022 cycle, the prohibition zone and administrative condemnation zone were removed. The areas are now part of the impaired restricted zone. They are considered nested. In addition, the condemnation expanded downstream and merged. It expanded further in the 2024 cycle and merged with a previous seasonally condemned area.

Potomac and Shenandoah River Basins

Cause Group Code: A31E-07-BAC **Popes Creek**

Cause Location: From the extent of tide to the mouth of Popes Creek

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: Popes Creek was initially assessed as impaired of the Recreation Use in 2002 based on fecal coliform standard exceedances at 1APOP000.38, which is located off of the George Washington National Monument picnic area. During the 2006 cycle, the fecal coliform rate remained impaired (2/7) and enterococci was added as an impairment (2/6).

During the 2010 cycle, the enterococci exceedance rate was 4/11.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

The impairment is considered nested because it is contained within the shellfish TMDL study area, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

Potomac and Shenandoah River Basins

Cause Group Code: **A31R-02-BAC** **Mattox Creek Watershed**

Cause Location: Mattox Creek from its headwaters to the limit of tide and all nontidal tributaries of Mattox Creek.

Cause City/County: King George County; Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2020 cycle, the nontidal Mattox Creek watershed was impaired of the Recreation Use due to an E. coli exceedance rate of 4/11 at 1AMAO007.46.

The TMDL had already been completed and was adopted by the EPA on 12/4/2006 and by the SWCB on 7/31/2008; therefore, the water is considered Category 4A for the Recreation Use.

New bacteria criteria were implemented in the 2022 cycle. No additional data was collected; however, re-analysis confirmed the impairment due to two or more STV exceedances in the same 90-day period with <10 samples.

In the 2022 cycle, it was determined that the TMDL only addressed the tributaries above the tidal limit, which is also where the listing station is. The tributaries below the tidal limit were removed from the impaired segment (partially delisted.)

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 004-184A, 3/15/2021

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 004-184A, 3/15/2021

Cold Harbor Creek was mistakenly assessed as impaired in the 1998 cycle due to VDH-DSS Shellfish Condemnation 184A, 6/21/1996. The area had been reopened on 2/10/1997; therefore, it should have been assessed as fully supporting.

The segment was first listed appropriately in the 2004 cycle. The impairment was addressed in the “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” report, which was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008. The TMDL was based on the extent in 184A, 6/18/2002. The segment is considered Category 4A for the shellfish use.

In the 2024 cycle, the condemnation expanded past this TMDL extent; the expansion will be considered nested.

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portions of VDH Shellfish Condemnation 004-082D, 1/15/2022

Portions of Nomini Creek (0.5404 sq. mi.) and Pierce Creek (0.14 sq. mi.) were assessed as impaired in 1998. During the 2004 cycle, the condemnation was expanded and combined. The Nomini Creek Watershed TMDL, which was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008, addressed the 1998 portions of the impairment (004-082B and 004-082A, 7/3/1997). The residual of the impaired area is addressed in A32E-04-SF2.

Cause Location: The portions of VDH Notice and Description of Shellfish Condemnation 004-082D, 1/15/2022 that were not included in the 2007 Nomini Creek watershed TMDL.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portions of VDH Condemnation 004-082D, 1/15/2022

Portions of Nomini Creek (0.5404 sq. mi.) and Pierce Creek (0.14 sq. mi.) were assessed as impaired in 1998. During the 2004 cycle, the condemnation expanded. The TMDL was approved by the EPA on 8/22/2007, but only addressed the 1998 portion of the impairment. As the condemnation first expanded on the 2004 list, the TMDL for the downstream portion was due in 2016.

The impairment is considered nested within the Nomini Creek Shellfish TMDL, which was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008.

The condemnation shrank slightly in the 2022 and 2024 cycles.

Potomac and Shenandoah River Basins

Cause Group Code: **A32E-05-SF** Buckner Creek

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 082D, 2/10/1997

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH Shellfish Condemnation 004-082B, 1/15/2022 VDH Shellfish Condemnation 004-082S205, 1/15/2022

The upper portion of Buckner Creek was assessed as impaired of the Shellfish Use during the 1998 cycle due to VDH shellfish advisory 082D, 2/10/1997. Although the closure was expanded during the 2008 cycle (004-082B 1/27/2006), the 2007 TMDL “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” only addressed the original upstream impaired area, which is classified as Category 4A.

In the 2016 cycle, the condemnation shrank (004-082B, 1/22/2014); the condemned area remained Category 4A and the lower portion was partially delisted (Category 2C.)

The condemnation expanded past the 1997 advisory boundary again in the 2018 cycle. See A32E-07-SF

In the 2020 cycle, it was a portion of VDH Shellfish Condemnation 004-082B, 2/13/2018. The condemned area shrank significantly in the 2022 cycle and became smaller than the TMDL area. The expansion was delisted; the re-opened part of the TMDL area was partially delisted.

The condemnation shrank further in the 2024 cycle; the remaining portion of the 1997 area is conditionally approved (Category 2C/2B).

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 005-083A, 5/15/2022

0.36 sq. mile of Lower Machodoc Creek was assessed in 1998 as impaired of the Shellfish Use due to VDH shellfish condemnation 83B, 5/16/1997.

A TMDL was developed based on the 005-083B, 12/28/2007 extent and was approved by the EPA on 12/29/2008 and by the SWCB on 4/28/2009.

The segment has expanded and contracted several times. The condemnation shrank considerably in the 2020 cycle and converted to seasonally condemned. The extension was delisted (Category 2B); the open portion of the TMDL was partially delisted (Category 2C/2B.)

The condemnation shrank again in the 2022 cycle and the impairment was adjusted.

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH Shellfish Condemnation 004-082A, 1/15/2022

The upper portion of North Prong Buckner Creek was assessed as impaired of the Shellfish Use during the 1998 cycle due to a VDH shellfish advisory (082E, 2/10/1997). Although the closure was expanded during the 2008 cycle (004-082A, 1/27/2006), the 2007 TMDL “Chesapeake Bay: Potomac River: Nomini Creek Watershed Total Maximum Daily Load (TMDL) Report for Shellfish Condemnation Areas Listed Due to Bacteria Contamination” only addressed the original upstream impaired area. The upstream portion of the condemnation was classified as Category 4A, however this lower portion was considered Category 5B and the TMDL was due in 2020.

The impairment was later nested in the North Prong Buckner Creek TMDL and is considered Category 4A.

The condemnation has varied in size. It shrank slightly in the 2022 cycle.

Cause Location: Described in VDH condemnation notice 005-083B, 12/28/2007

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2022 cycle, lower Machodoc Creek was impaired of the Recreation Use due to enterococci exceedances at 1ALOW004.77, which is located off Route 618. There were two or more STV exceedances in the same 90-day period with <10 samples.

There was insufficient information to assess enterococci in the 2024 cycle (one STV exceedance in one or multiple 90-day periods but insufficient data to analyze geomean.) The impairment will be carried over.

The impairment is located within the study area for the Lower Machodoc Watershed Shellfish TMDL, which was approved by the EPA on 12/29/2008 and by the EPA on 4/28/2009. As the shellfish TMDL requires the reduction of fecal coliform bacteria in the watershed, the Recreation Use is considered nested (Category 4A).

Cause Location: Lee Creek from its headwaters to the tidal limit.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, Lee Creek was impaired of the Recreation Use due to an E. coli exceedance rate of 4/13 at 1ALEC001.18, which is located at the Route 675 bridge.

The stream is located within the Lower Machodoc Creek watershed. A bacterial TMDL was developed for the watershed to address the shellfish consumption use. The TMDL was approved by the EPA on 12/29/2008 and by the SWCB on 4/28/2009. It requires a 93% reduction in fecal coliform bacteria into the Lower Machodoc tidal area. These reductions are expected to be sufficient to address the E. coli impairment in Lee Creek; therefore, the impairment is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Potomac and Shenandoah River Basins

Cause Group Code: **A32R-05-BAC** Tavern Run

Cause Location: Tavern Run from its headwaters to the confluence with Newtons Mill Run.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2012 cycle, Tavern Run was impaired of the Recreation Use due to E. coli violations at 1ATAE002.50, which is located at the Route 615 bridge.

Additional monitoring occurred in the 2014 cycle; the impairment was confirmed with exceedance rates of 8/24 at 1ATAE002.50 and 2/12 at 1ATAE003.85.

A bacterial TMDL was developed for the watershed to address the shellfish consumption use. The TMDL was approved by the EPA on 8/22/2007 and by the SWCB on 7/31/2008. It requires a 68% reduction in fecal coliform bacteria into the upper Nomini Creek tidal area. These reductions are expected to be sufficient to address the E. coli impairment in the stream; therefore, the impairment is considered to be nested (Category 4A).

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 006-143B, 5/5/2005

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 006-143B and -143D, 6/15/2022 VDH-DSS Condemnation Notice 006-143S2, 6/15/2022 (seasonally condemned)

The Shellfish Bacterial TMDL for Jackson Creek was approved by the EPA on 7/15/2009 and by the SWCB on 11/14/2009. The TMDL addressed the maximum extent of the condemnation, which occurred in condemnation 006-143B, 5/5/2005.

The condemnation has expanded and contracted several times.

The condemnation shrank in the 2018 cycle and the downstream portion was partially delisted (Category 2C).

During the 2024 cycle, a portion of the remaining restricted area (006-143B, 6/15/2022) shrank and converted to administratively condemned; it will be partially delisted. 006-143D, 6/15/2022 remains restricted (Category 4A.)

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-03-BAC** **Bonum Creek**

Cause Location: The tidal portion of Bonum Creek.

Cause City/County: Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, Bonum Creek was impaired of the Recreation Use due to an enterococci violation rate of 4/12 at 1ABOM000.46, which is located at the end of Rt. 763.

The Bonum Creek Shellfish TMDL was approved by the EPA on 7/15/2009 and by the EPA on 11/14/2009. The TMDL addressed Bonum Creek to its mouth. As this bacterial impairment is located within the study area for the completed TMDL, the Recreation Use is considered nested (Category 4A.)

The impairment was adjusted slightly in the 2018 cycle to remain coincident with the shellfish condemnation. The exceedance rate was 4/11 in the 2018 cycle.

During the 2020 cycle, the shellfish condemnation shrank and the listing station was now outside of the condemnation. The Recreation Use impairment was adjusted to end at the mouth of Bonum Creek.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; however, re-analysis of the 2018 data confirmed impairment due to two or more STV exceedances within the same 90-day period with <10 samples.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-04-BAC** Lodge Creek

Cause Location: Lodge Creek from its tidal limit to the downstream extent of VDH-DSS condemnation 007-028F, 5/12/1997

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/5A

Cause Description: Lodge Creek from its tidal limit downstream to the end of VDH-DSS condemnation 007-028F, 7/21/2004 has been assessed as not supporting the Recreation Use due to enterococci exceedances at 1ALOG001.20, which is located at the end of Route 712. The segment was expanded during the 2008 cycle to align the boundary with the 5/12/1997 impairment.

During the 2020 cycle, the violation rate was 6/36.

New bacteria criteria were implemented in the 2022 cycle. There has been insufficient information to assess the criteria; therefore, the impairment is carried over.

Note: The bacteria TMDL for shellfish impairments in the Yeocomico River watershed was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009. Section 028F was addressed in the report. However, the Recreation Use impairment cannot be nested because the Callao WWTP was not addressed in the TMDL.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: A33E-05-SF **White Point Creek**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 007-028B, 5/12/1997

Cause City/County: Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 007-028C, 10/15/2022

White Point Creek was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028B, 5/12/1997. The condemnation grew during the 2008 cycle (007-028B, 12/12/2006); however, only the original 1998 portion was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

However, during the 2012 cycle, the entire segment was open for harvest on the 11/1/2010 condemnation; therefore the segment was delisted.

A portion of the area closed again in the 2018 cycle. The open portion remained Category 2C.

Condemnation shortened again in the 2020 cycle.

During the 2024 cycle, the expansion expanded but remains smaller than the TMDL extent. The downstream portion of the TMDL extent is seasonally condemned (Category 2C/2B)

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-07-BAC** **Hampton Hall Branch**

Cause Location: Tidal Hampton Hall Branch

Cause City/County: Northumberland County; Westmoreland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, Hampton Hall Creek was impaired of the Recreation Use due to an enterococci exceedance rate of 3/11 at 1AHAM001.92, which is located at Route 202.

The exceedance rate was 2/11 in the 2018 cycle.

New bacteria criteria were implemented in the 2022 cycle. No new data were collected, but re-analysis of the 2018 data confirmed that the segment remained impaired due to two or more STV exceedances in the same 90-day period with <10 samples.

The area is within the study area for the Yeocomico River Watershed TMDL report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009; therefore, the segment is considered nested (Category 4A).

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-07-SF** **Hampton Hall Branch, Kinsale Branch**

Cause Location: Described in VDH Notice and Description of Shellfish Condemnations VDH-DSS Shellfish Condemnation 007-028C, 5/12/1997

Cause City/County: Northumberland County; Westmoreland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 007-028A, 10/15/2022

The West Yeocomico River (including Hampton Hall Branch and Kinsale Branch) was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028C, 5/12/1997. The original 1998 portion was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009. This portion was considered as Category 4A.

The segment shortened dramatically during the 2012 cycle and split into two separate condemnations - Kinsale Branch and Hampton Hall Creek. These areas remained Category 4A. The remainder of the 1998 extent was partially delisted (Category 2C).

The condemnation extended to the TMDL extent in the 2016 cycle.

It shrank and split in the 2020 cycle based on 007-028, 10/2/2018. Condemnations B and D remain closed (Category 4A.) The portion within 007-028S39 is seasonally condemned and was partially delisted (Category 2C/2B.) Condemnation E is now administratively condemned and was partially delisted; the use is considered removed.

In the 2022 cycle, 007-028B expanded slightly. 007-028E 10/2/2018 converted to seasonally condemned (a portion of 007-028S39, 10/15/2020) and was partially delisted (Category 2C/2B.)

During the 2024 cycle, the condemnations merged and expanded downstream to the limit of the TMDL extent.

Cause Group Code: **A33E-09-SF** Mill Creek

Cause Location: Described in VDH Notice and Description of Shellfish Condemnations 007-225B, 13/15/2022

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 007-225B, 3/15/2022

The upper part of Mill Creek was listed as impaired of the Shellfish Consumption Use in the 1998 cycle due to condemnation 007-028E, 5/12/1997. It was included in the Yeocomico River Watershed TMDL Report, which was approved by the EPA on 6/8/2006 and by the SWCB on 4/28/2009.

The condemnation size has been adjusted/split/merged in numerous cycles. In the 2022 cycle, the Mill Creek condemnation was smaller than the 1998 area. The upstream portion remained impaired (Category 4A); the lower portion was considered a partial delist (Category 2C.)

The condemnation expanded in the 2024 cycle but remains smaller than the TMDL extent.

Potomac and Shenandoah River Basins

Cause Group Code: **A33E-10-SF** Lodge Creek

Cause Location: Portion of VDH Notice and Description of Shellfish Condemnation 007-028A, 3/15/2022 which is not administratively condemned

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH-DSS Shellfish Condemnation 007-225A, 3/15/2022

A portion of Lodge Creek was assessed as impaired of the Shellfish Use in 1998 due to VDH condemnation 028F, 5/12/1997. It was subsequently addressed in the bacteria TMDL for shellfish impairments in the Yeocomico River Watershed, which was approved by the EPA on 6/8/2006.

However, during the 2010 cycle, it was determined that the upper portion of the condemnation (007-028E, 11/10/2008) is an administrative closure. Therefore the use was considered removed and the upper portion was partially delisted. The downstream portion remains impaired and is considered Category 4A.

During the 2012 cycle, the condemnation shrank and the downstream-most portion was converted to seasonally condemned; therefore, it was partially delisted.

The condemnation has varied in size; it is currently smaller than the TMDL extent (Category 4A/2C).

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: A33R-01-BAC Mill Creek

Cause Location: From its headwaters to the tidal limit.

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: During the 2002 cycle, Mill Creek was assessed not supporting of the Recreation Use goal based on fecal coliform exceedances at Route 202 (1AMIA004.12).

During the 2010 cycle, the E. coli violation rate at 1AMIA004.12 was 1/6 (insufficient information for assessment). However, there was additional monitoring downstream at 1AMIA002.34 which showed impairment (2/6). The segment remained listed and was extended downstream to the tidal limit; the impairment converted to E. coli.

In the 2018 cycle, the E. coli exceedance rates were 3/12 at 1AMIA002.34 and 6/24 at 1AMIA004.12.

The Bacteria TMDL for (non-tidal) Mill Creek was approved by the EPA on 7/30/2010 and by the SWCB on 12/13/2010.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; however, the data within the 2022 data window were re-analyzed using the new criteria. The impairment is confirmed at 1AMIA004.12 due to two or more STV exceedances within the same 90-day period with <10 samples. There is insufficient data to assess station 1AMIA002.34; therefore, the impairment is carried over at that station.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 145D, 2/25/1997

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH Shellfish Condemnation 008-213A,3/15/2022

A 0.13 portion of Glebe Creek was initially assessed as impaired of the Shellfish Use due to VDH-DSS Condemnation Notice 145D, 2/25/1997.

In the 2004 cycle, the segment was extended; however, the TMDL was only performed on the 1998 portion. The TMDL was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004. The original impairment is classified as Cat. 4A (TMDL completed). The expansion is addressed in fact sheet A34E-01-SF2.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation Number 008-214B, 3/15/2022

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Shellfish Condemnation 008-214B, 3/15/2022

A portion of the tributary was listed in the 1998 cycle due to condemnation 145G, 2/25/1997. The shellfish condemnation for this segment was included in “Coan River Watershed Total Maximum Daily Load (TMDL) Report for Six Shellfish Areas”, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/02/2004. The condemnation size has been adjusted through several cycles; however, during the 2012 cycle the condemnation shrunk and it currently matches the 1998 impairment. It is considered Category 4A.

Note: Although the 1998 portion of the tributary is shown on the TMDL map, the TMDL used station 8-33 which is near the mouth of the creek instead of station 8-34, which was located within the 1998 impairment.

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-05-BAC** **Coan River**

Cause Location: Coan River mainstem within VDH Shellfish Condemnation Number 145I, 2/25/1997

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2012 cycle, the uppermost portion of the Coan River was assessed as impaired of the Recreation Use due to an enterococci exceedance rate of 2/12 at 1ACOA004.12, which is located at a private dock at the end of Route 629. As the impairment is located within the study area for the Shellfish bacterial TMDL for the Coan River which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004, the impairment is considered nested (Category 4A).

A portion of nontidal Coan Mill Stream was impaired of the Recreation Use since the 2002 cycle based on E. coli exceedances at 1ACON000.96 (old fact sheet A34R-01-BAC). In the 2014 cycle, it was determined that this station is actually tidally influenced. The impairment is now a part of A34E-05-BAC. The enterococci exceedance rate was 12/24 during the 2014 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Cause Location: Described in VDH-DSS Notice 145I, 2/25/1997

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 008-214A, 3/15/2022 Portion of VDH-DSS Condemnation 008-214S6, 3/15/2022

Mill Creek and the upstream most portion of the Coan River were assessed as impaired of the Shellfish Use in 1998 because of VDH SFC 145I, 2/25/1997. The impairment expanded in several assessment cycles. However only the original segment was included in “Coan River Watershed Total Maximum Daily Load (TMDL) Report for Six Shellfish Areas”, which was completed during the 2006 cycle and approved by the EPA on 12/18/2003 and by the SWCB on 12/02/2004.

During the 2016 cycle, the condemnation shrank significantly and is now smaller than the TMDL extent. The condemned segment is classified as Category 4A; the newly opened portion was partially delisted (Cat 2C).

The condemnation shrank further in the 2020 cycle. It shrank again and split in the 2022 cycle. A portion of Mill Creek was partially delisted.

The condemnations expanded and re-merged in the 2024 cycle. It remains smaller than the TMDL extent (Category 4A/2C).

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 009-141C, 3/30/2009

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 009-141C, 2/15/2022

Presley Creek was included on the 1998 303(d) list due to VDH condemnation 140, 4/27/1989. The Shellfish TMDL for Presley Creek was developed based on the maximum extent of the impairment (009-141C, 3/30/2009). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, Presley Creek is considered Category 4A.

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnations 009-142A, -B, and -E, 4/15/2021

A portion of Hull Creek was listed as impaired of the Shellfish Use in the 1998 cycle because of VDH-DSS Shellfish Condemnation 142A, 1/31/1997.

The Shellfish TMDL for Hull Creek was developed based on the maximum extent of the impairment (8/21/2000). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, Hull Creek is considered Category 4A.

The condemnation subsequently shrank and split segments. Closed segments remain Category 4A; the remainder (including Spring Cove) was partially delisted (Category 2C).

The condemnation grew slightly in the 2018 cycle and Spring Cove was relisted.

Cause Description: VDH Shellfish Condemnation 010-105G, 6/15/2022 Portion of VDH Shellfish Condemnation 010-105S86, 6/15/2022 - seasonally condemned

Cod Creek was assessed as impaired during the 1998 cycle because of VDH-DSS Shellfish Condemnation 105B, 6/10/1997. The TMDL was adopted by the EPA on 12/18/2003 and the SWCB on 12/2/2004. The impairment shortened during the 2012 cycle and a portion of the impairment was partially delisted.

The impairment expanded in the 2014 and 2016 cycles (see fact sheet A34E-11-SF). It shrunk back to the TMDL extent in the 2018 cycle.

The condemnation shrank further in the 2020 cycle and the lower portion is seasonally condemned and was partially delisted (Category 2C/2B.)

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH Shellfish Condemnation 010-105A, 6/15/2022

This segment of the Little Wicomico River was assessed as impaired in 1998 based on VDH SFC 105B 6/10/1997.

The Little Wicomico River Shellfish TMDL was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

The condemnation extent has expanded and contracted in multiple cycles. It is currently larger than the 1997 / TMDL extent and is Category 4A.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-16-SF2** **Little Wicomico River**

Cause Location: Portion of VDH-DSS Condemnation 010-105A, 010-105E, and -010-105H, 6/15/2022 not impaired in 1998

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: Portion of VDH-DSS Condemnation 010-105A, 010-105E, and -010-105H, 6/15/2022

A segment of the Little Wicomico River was assessed as impaired in 1998 based on VDH SFC 105B 6/10/1997. During the 2004 cycle, the segment expanded and has subsequently expanded and contracted during various assessment cycles. However, the 2003 TMDL only covered the original 1998 impaired section, which is classified as Cat. 4A. The TMDL for the expansion was due in 2016.

During the 2016 cycle, condemnation 010-105A, 6/9/2014 expanded considerably and several impairments were merged (A34E-16-SF2 and A34E-30-SF).

The condemnation shortened and split in the 2018 cycle; in addition, a seasonally condemned portion (010-105M4) was split off and partially delisted.

In the 2020 cycle, the condemnation shrank further and the mainstem Little Wicomico River condemnation (010-105A, 6/26/2018) is now smaller than the TMDL extent. The tributaries remain listed.

The mainstem condemnation expanded past the TMDL extent in the 2024 cycle.

The impairment is considered nested within the upstream Little Wicomico River Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

Cause Group Code: **A34E-17-SF** Bridge Creek

Cause Location: Described in VDH condemnation 010-105B and 010-105I, 6/26/2018 (open in the 1998 cycle)

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation Notice 010-105B, 6/15/2022

A small portion of the segment was listed in the 2006 cycle due to condemnation 010-105C, 9/15/2004. The segment expanded and merged with another condemnation during the 2008 cycle. Although the other condemnation was listed in 1998 and was later addressed in the shellfish TMDL, this AU represented the portion of the condemnation which was not included in the 2003 TMDL.

The condemnations shrank during the 2020 cycle. In addition, a portion was converted to seasonally condemned and was partially delisted.

The condemned area shrank further in the 2022 cycle and is now limited to one condemnation.

The impairment is considered nested within the Bridge Creek Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004.

Cause Location: Described in VDH Notice and Description of Shellfish Condemnation 180, 6/10/1997

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS Condemnation 010-105D, -105J, and -105K, 6/15/2022

Bridge Creek was impaired of the Shellfish Consumption Use during the 1998 cycle due to VDH-DSS condemnation 180, 6/10/1997. The segment was delisted in 2004 because the area was reopened for harvest, but was closed again in the 2006 cycle.

The segment received a fecal coliform allocation in the “Little Wicomico River Watershed TMDL for Three Shellfish Areas Listed Due to Bacteria Contamination” report which was approved by the EPA on 12/18/2003; therefore, it is considered Cat. 4A for shellfish consumption.

The condemned areas have expanded and contracted over several cycles. The restricted areas are currently smaller than the TMDL area are considered Category 4A. Re-opened and seasonally condemned areas are considered Category 2C and Category 2C/2B, respectively.

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-24-BAC** Spring Cove

Cause Location: Tidal Spring Cove

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: During the 2010 cycle, Spring Cove was assessed as not supporting of the Recreation Use due to enterococci exceedances at 1ASPN000.08, which is located at the boat ramp off of Route 629.

Because the area is within the study area for the Hull Creek Shellfish TMDL which was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010, the Recreation impairment is considered nested (Category 4A.) The exceedance rate was 6/26 during the 2012 cycle.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **A34E-31-BAC** Little Wicomico River

Cause Location: Tidal extent to mouth

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Enterococcus/4A

Cause Description: In the 2006 cycle, the upper tidal portion of the Little Wicomico River was considered impaired of the Recreation Use due to enterococci exceedances at 1ALIS004.20, which is located off the mouth of Spences Creek. The enterococci violation rate was 4/26 during the 2012 cycle.

It was shortened in the 2018 cycle to remain coincident with the shellfish closure since that limit is more stringent.

In the 2020 cycle, monitoring at 1ALIS002.00 was also unacceptable (4/36); therefore, the impairment was extended to include the mainstem of the Little Wicomico River.

New bacteria criteria were implemented in the 2022 cycle. The segment remained impaired at 1ALIS002.00 due to two or more STV exceedances in the same 90-day period with <10 samples.

No additional data data has been collected at 1ALIS004.20. There was insufficient information to assess 1ALIS002.00 in the 2024 cycle (no STV exceedances but insufficient data to analyze geomean.) The impairment is carried over.

The impairment is considered nested because it is located within the tidal excursion of the upstream Little Wicomico River Shellfish TMDL. The TMDL was approved on 12/18/2003 and by the SWCB on 12/2/2004.

Cause City/County: Northumberland County

Use(s): Shellfishing

Causes(s)/VA Category: Fecal Coliform/4A

Cause Description: VDH-DSS condemnation 009-161B, 4/27/2018

Hack Creek was designated as a non-productive shellfish growing area by VDH-DSS in previous summaries, so the use had been considered removed. However, during the 2008 cycle, it was determined that VDH considers the water condemned and Hack Creek was assessed as impaired (161, 4/27/1989.)

The Shellfish TMDL for Hack Creek was developed for the entire creek to its mouth based on the maximum extent of the impairment (009-161B, 3/14/2007). The TMDL was approved by the EPA on 11/16/2009 and by the SWCB on 9/30/2010; therefore, the creek is considered Category 4A.

Appendix 4 - Fact Sheets for Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: [A34R-02-BAC](#) **Little Wicomico River**

Cause Location: The nontidal portion of Little Wicomico River.

Cause City/County: Northumberland County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: The nontidal portion of the Little Wicomico River was impaired of the Recreation Use in the 2018 cycle due to an E. coli exceedance rate of 4/13 at 1ALIS007.20.

New bacteria criteria were implemented in the 2022 cycle. No additional data have been collected; therefore, the impairment is carried over.

The segment is within the TMDL study area for the Little Wicomico River Watershed Shellfish TMDL, which was approved by the EPA on 12/18/2003 and by the SWCB on 12/2/2004. It is considered nested (Category 4A.)

Potomac and Shenandoah River Basins

Cause Group Code: **B12R-01-PCB** Lewis Creek

Cause Location: Lewis Creek south of the Staunton City boundary near the power line crossing downstream to its confluence with Middle River.

Cause City/County: Augusta County; Staunton

Use(s): Aquatic Life; Fish Consumption; Wildlife

Causes(s)/VA Category: PCBs in Fish Tissue/4A; Polychlorinated biphenyls (PCBs)/4A

Cause Description: This segment is included in the VDH Fish Consumption Advisory for Polychlorinated Biphenyls (PCBs), effective 12/13/04. Visit <https://www.vdh.virginia.gov/environmental-health/public-health-toxicology/fish-consumption-advisory/> for more information.

Exceedances of the WQS based PCB fish tissue value of 18 ppb were found in recent fish tissue collections. Fish tissue collected at station 1BLEW005.24 on 8/28/2017 (PCB exceedances: White Sucker (17 fish) at 32 ppb) and on 9/23/2020 (PCB exceedances: Bluehead Chub (13 fish) at 20 ppb).

Five PCB water column samples were collected during the 2022 data window at station 1BLEW000.61 (three excursions of the 580 pg/L human health criterion occurred). The PCB impairment is included in the EPA approved Lewis Creek PCB TMDL (approved 02/04/2022).

Potomac and Shenandoah River Basins

Cause Group Code: **B12R-02-BAC** Middle River

Cause Location: Middle River from the quarry discharge west of Franks Mill downstream to its confluence with Christians Creek.

Cause City/County: Augusta County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli WQS at station: 1BMDL043.35 (in 2024 no E.coli STV exceedances occurred but there is insufficient data to analyze geomean, thus the impairment remains). Original Initial Listing Date: 2008, segment de-listed in 2016, re-listed in 2018 as Cause ID B12-02-BAC. In 2022 this segment was extended to include one additional downstream segment with exceedances of the E.coli WQS at stations 1BMDL036.08 and 1BMDL037.63 (2022- both stations are impaired with two or more STV hits in the same 90-day period with less than 10 samples- revised E.coli WQS analysis, no new data 2024). This segment is nested into the EPA approved Middle River bacteria TMDL.

Potomac and Shenandoah River Basins

Cause Group Code: **B14R-03-BAC** Long Meadow Run

Cause Location: Long Meadow Run and tributary from the headwaters downstream to its confluence with Christians Creek. (Start Mile: 11.06 End Mile: 0.00 Total Impaired Size: 11.06 Miles)

Cause City/County: Augusta County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli bacteria WQS at station: 1BMDW000.18 (2024-one STV exceedance in multiple 90-day periods but insufficient data to analyze geomean, impairment remains). Initial Listing Date: 2006; This segment is located within the geographical boundary of the EPA approved Christians Creek bacteria TMDL and is considered to be Category 4A - Impaired - EPA Approved TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAV-B14R_MDW01A00 / Long Meadow Run / Long Meadow Run and tributary (Coleytown Run) from the headwaters downstream to its confluence with Christians Creek.	4A	Escherichia coli (E. coli)	2006	L	11.06

Cause Group Code: B30R-01-BAC South River

Cause Location: South River from the headwaters downstream to its confluence with Stony Run.

Cause City/County: Augusta County

Use(s): Recreation

Causes(s)/VA Category: Escherichia coli (E. coli)/4A

Cause Description: This segment is impaired due to exceedances of the e-coli bacteria WQS at stations: 1BSTH041.68 (40 exceedances of 71 samples for e-coli in 2020, no data 2024) and 1BSTH044.90 (4 exceedances of 6 samples for e-coli in 2016, no data in 2024). Initial Listing Date: 1996; This segment was included in the EPA approved Middle River/South River bacteria TMDL.

Cause Location: Toms Branch from the headwaters downstream to its confluence with Back Creek. (Start Mile: 3.49 End Mile: 0.00 Total Impaired Size: 3.49 Miles)

Cause City/County: Augusta County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4C

Cause Description: This segment is considered impaired for aquatic life use based on benthic assessment performed by the U.S. Forest Service at site 5104 in the 2004 assessment. Newer data in 2012 indicate improvement at this site, however, at least two consecutive supporting samples are needed for de-listing. This impairment was determined to be natural in the 2004 assessment based on prolonged drought conditions. Initial Listing Date: 2004.

Causes(s)/VA Category: Mercury in Fish Tissue/4A

Cause Description: This segment is within a VDH Fish Consumption Advisory for Mercury Contamination, effective 5/17/89; modified 12/13/04. For more information visit <https://www.vdh.virginia.gov/environmental-health/public-health-toxicology/fish-consumption-advisory/>

Exceedances of the mercury WQS based tissue value of 0.30 parts per million (ppm) were found in these recent fish tissue samples: 1BSTH002.14 (South River at Grottoes Town Park)- sampled on 9/17/2020: redbreast sunfish at 1.61 ppm and smallmouth bass at 2.33 ppm and 3.99 ppm; 1BSSF000.19 (South Fork Shenandoah River below Rt 340)- sampled on 8/26/2020: smallmouth bass at 1.30 ppm, redbreast sunfish at 0.56 ppm and 0.48 ppm, and channel catfish at 0.39 ppm, 0.46 ppm, 0.52 ppm, and 0.31 ppm; 1BSSF010.33 (South Fork Shenandoah River at Karo)- sampled on 10/7/2020: channel catfish at 0.66 ppm, 0.54 ppm, and 0.75 ppm, smallmouth bass at 0.96 ppm, redbreast sunfish at 0.67 ppm, and white sucker at 0.32 ppm; 1BSSF037.60 (South Fork Shenandoah near Rt 684)- sampled on 9/10/2020: smallmouth bass at 0.77 ppm, channel catfish at 0.72 ppm, 0.61 ppm, 0.63 ppm, 0.45 ppm, and 0.51 ppm, redbreast sunfish at 0.41 ppm; 1BSSF063.17 (South Fork Shenandoah at Newport boat launch)- sampled on 6/15/2020: smallmouth bass at 0.63 ppm, redbreast sunfish at 0.42 ppm, white sucker at 0.59 ppm, northern hogsucker at 0.57 ppm, and channel catfish at 0.52 ppm; 1BSSF078.24 (South Fork Shenandoah at Rt 602)- sampled on 6/15/2020: Channel catfish at 1.41 ppm and 1.32 ppm, smallmouth bass at 0.94 ppm, redbreast sunfish at 0.48 ppm, and white sucker at 0.64 ppm; 1BSSF096.03 (South Fork Shenandoah at Rt 652)- sampled on 9/28/2020: fallfish at 0.75 ppm, redbreast sunfish at 0.58 ppm, and smallmouth bass at 1.10 ppm, 1.03 ppm, and 4.0 ppm; 1BNFS000.57 (North Fork Shenandoah at Rt 340)- sampled on 8/26/2020: largemouth bass at 0.53 ppm and 0.98 ppm and channel catfish at 0.69 ppm; 1BSHN028.15 (Shenandoah River at Lockes Landing)- sampled on 9/9/2020: carp at 0.67 ppm and 0.81 ppm, channel catfish at 0.64 ppm, 0.74 ppm, and 0.63 ppm, and smallmouth bass at 0.96 ppm; 1BSHN038.27 (Shenandoah River at Rt 50)- sampled on 9/9/2020: smallmouth bass at 0.71 ppm and 0.73 ppm, walleye at 1.28 ppm, redbreast sunfish at 0.33 ppm, carp at 0.62 ppm, and channel catfish at 0.60 ppm, 1BSHN053.63 (Shenandoah River downstream of I-66)- sampled on 9/21/2020: largemouth bass at 0.96 ppm and 0.49 ppm, redbreast sunfish at 0.49 ppm and 0.38 ppm, carp at 0.64 ppm, channel catfish at 0.66 ppm, and rock bass at 0.42 ppm.

Initial Listing Date: 1998. Included in the EPA approved South Fork Shenandoah River Mercury (Fish Tissue) TMDL. Historical information can be found in previous integrated report factsheets.

Potomac and Shenandoah River Basins

Cause Group Code: **B32R-02-PCB** **South River**

Cause Location: South River from its confluence with Stull Run downstream to its confluence with North River.

Cause City/County: Augusta County; Rockingham County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: This segment is impaired due to the presence of Polychlorinated Biphenyls (PCBs) in fish tissue at station 1BSTH000.19. Exceedances of the WQS based PCB tissue value occurred on 8/9/2005: Carp (1 fish) at 269 ppb and Redhorse Sucker (3 fish) at 139 ppb. Initial Listing Date: 2008.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Cause City/County: Page County; Rockingham County

Use(s): Fish Consumption

Causes(s)/VA Category: PCBs in Fish Tissue/4A

Cause Description: This segment is impaired due to exceedances of the WQS based Polychlorinated Biphenyls (PCBs) fish tissue value collected at stations 1BSSF063.17 (4/6/2005): Largemouth Bass at 59.12 ppb (3 fish) and Redbreast Sunfish at 24.31 ppb (5 fish) and 1BSSF078.24 (4/5/2005): Smallmouth Bass at 46.83 ppb (5 fish), Redbreast Sunfish at 29.37 ppb (5 fish), and White Sucker at 78.99 ppb (5 fish).

Exceedances of the WQS based PCB fish tissue value of 18 ppb were found in recent fish tissue samples. Fish tissue collected at 1BSSF078.24 on 6/15/2020: Channel Catfish with 91.91 ppb (1 fish) and 30.65 ppb (2 fish composite). Smallmouth Bass, Redbreast Sunfish, and White Suckers collected at this station did not exceed the WQS based PCB fish tissue value. Fish tissue collected at 1BSSF063.17 on 6/15/2020 shows no exceedances of the WQS based PCB fish tissue value in Smallmouth Bass, Redbreast Sunfish, White Sucker, Northern Hogsucker, and Channel Catfish samples.

Initial Listing Date: 2010. The PCB impairment is nested in the EPA approved Shenandoah River Watershed TMDL for Polychlorinated biphenyls (PCBs).

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **B50R-01-BEN** Toms Brook

Cause Location: Toms Brook from the headwaters downstream to its confluence with the North Fork Shenandoah River.

Cause City/County: Shenandoah County

Use(s): Aquatic Life

Causes(s)/VA Category: Benthic Macroinvertebrates Bioassessments/4A

Cause Description: This segment is impaired due to exceedances of the General Standard for benthics at station: 1BTMB000.70 (Impaired for VSCI in 2018). This is a re-list of a previous impairment that is included in the EPA Approved Toms Brook Benthic TMDL.

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size

Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: **CB5MH-SAV-BAY** Chesapeake Bay segment CB5MH

Cause Location: This cause encompasses the complete CBP segment CB5MH.

Cause City/County: Chesapeake Bay - County Not Applicable; Lancaster County; Northumberland County

Use(s): Aquatic Life; Shallow-Water Submerged Aquatic Vegetation

Causes(s)/VA Category: Aquatic Plants (Macrophytes)/4A

Cause Description: The Chesapeake Bay Water Quality Standards were implemented during the 2006 cycle. These criteria are based on segment-wide dissolved oxygen and submerged aquatic vegetation criteria.

Chesapeake Bay segment CB5MH is impaired of the Aquatic Life due to inadequate submerged aquatic vegetation acreage. The Submerged Aquatic Vegetation goal is 7,633 acres but only 14% was attained found in the most recent 3 years according to aerial analysis of SAV.

Impaired (Category 4 or 5) Waters in 2024

Potomac and Shenandoah River Basins

Cause Group Code: POTMH-SAV-BAY Potomac Mesohaline Embayments

Cause Location: Includes all waters in the mesohaline portion of the Potomac River (POTMH).

Cause City/County: King George County; Northumberland County; Westmoreland County

Use(s): Aquatic Life; Shallow-Water Submerged Aquatic Vegetation

Causes(s)/VA Category: Aquatic Plants (Macrophytes)/4A

Cause Description: Since the 2006 cycle, the Potomac River mesohaline estuary (POTMH) has failed the Chesapeake Bay Submerged Aquatic Vegetation (SAV) acreage water quality standard.

There has been insufficient information to assess the water clarity acreage.

The Chesapeake Bay TMDL was approved by the EPA on 12/29/2010; therefore, the segment is Category 4A.

VAP-A34E_HUL01D24 / Hull Creek / Portion of VDH condemnation 142B, 8/21/2000 open in 009-142, 4/15/2021. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.157
VAP-A34E_KIN01A00 / Kingscote Creek / Downstream of condemnations 008-213, 3/15/2022 to the Coan River. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.337
VAP-A34E_KIN02A06 / Kingscote Creek / Described in VDH-DSS condemnation 008-213M1, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.007
VAP-A34E_KIN03A06 / Kingscote Creek / Described in VDH-DSS condemnation 008-213M2, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.006
VAP-A34E_KIN04A06 / Kingscote Creek, UT / Described in VDH-DSS condemnation 008-213B, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.009
VAP-A34E_KIN05A22 / Kingscote Creek, UT / Described in VDH-DSS condemnation 008-213S133, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.012
VAP-A34E_KNC01A98 / Killneck Creek / Described in VDH-DSS condemnation 145E, 2/25/1997. Merged in the 2024 cycle. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.049

Virginia Department of Environmental Quality
Appendix 4 - Fact Sheets for
Impaired (Category 4 or 5) Waters in 2024

(continued)

Assessment Unit / Water Name / Location Desc.	Cause Category	Cause Name	Cycle First Listed	TMDL Dev. Priority	Water Size
VAP-A34E_KNC01B06 / Killneck Creek, UT / Described in VDH-DSS condemnation 008-214M2, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.014
VAP-A34E_MII01A06 / Mill Creek / Tidal Mill Creek to its mouth at the Coan River. Merged in the 2024 cycle. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.104
VAP-A34E_PRE01A98 / Presley Creek / Described in VDH-DSS condemnation notice 009-141C, 2/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.332
VAP-A34E_ROG01A98 / Rogers Creek / Described in VDH-DSS condemnation notice 009-142C, 4/15/2021. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.035
VAP-A34E_ROG01B16 / Rogers Creek / Described in VDH-DSS condemnation 009-142S202, 4/15/2021. Split in the 2024 cycle. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.016
VAP-A34E_ROG01C24 / Rogers Creek / Portion of VDH-DSS Condemnation 009-142C, 3/17/2008 open in 009-142, 4/15/2021. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.007
VAP-A34E_SPN01A04 / Spring Cove / Tidal limit to mouth at Hull Creek POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.010
VAP-A34E_XFI01A98 / XFI - Coan River, UT (Stevens Point) / Described in VDH-DSS condemnation notice 008-214M1, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.038
VAP-A34E_XFJ01A98 / XFJ - Coan River, UT (aka Cellars Cove) / Described in the condemnation notice 008-214B, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.032
VAP-A34E_XFJ02A22 / XFJ - Coan River, UT (aka Cellars Cove) / Described in VDH-DSS condemnation 008-214S135, 3/15/2022. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.027
VAP-A34E_XLV01A10 / XLV - Potomac River, UT (aka Corbin Pond) / As described in VDH-DSS condemnation 009-142D, 4/15/2021. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.043
VAP-A34E_ZZZ01A00 / Unsegmented estuaries in A34 / Unsegmented portion of the watersheds PL72 and PL73. POTMH	4A	Aquatic Plants (Macrophytes)	2006	L	0.182
