## **1.0 INTRODUCTION AND SITE HISTORY**

---

---

On November 2, 2023, Total Environmental Concepts, Inc. (TEC) received a call from the Virginia Department of Environmental Quality (DEQ) Blue Ridge Regional Office (BRRO) regarding a report of a petroleum odor in a residential supply well located at 1556 Coopers Cove Road in Hardy (Franklin County), Virginia. The homeowner initially contracted Culligan Water to install a water softener system due to odors and water staining in their residence. During preliminary testing, Culligan technicians noted a petroleum odor in the tap water. After Culligan confirmed the presence of petroleum on-site, DEQ was alerted, and Pollution Complaint (PC) Number 2024-2089 was opened under the State Lead Program.

### **1.1 HISTORICAL REPORTS**

#### **1.1.1 Release Investigation Report - February 2, 2024**

Mr. David Kirby, DEQ BRRO case manager, tasked TEC with conducting a Release Investigation (RI) to identify a potential source (or sources) of a petroleum release. During this phase of work, groundwater samples were obtained from 44 residential supply wells located within one mile radius of the suspected petroleum release. A total of 18 supply wells were confirmed to be impacted by methyl tert-butyl ether (MTBE) and/or other petroleum-related constituents. Carbon filtration units (CFUs) were installed on each impacted supply well in order to provide potable drinking water to each residence.

During the RI, TEC discovered three underground storage tanks (USTs) at 1640 Coopers Cove Road. These tanks are located approximately 200 feet north and topographically up-gradient from the impacted supply well at 1556 Coopers Cove Road.

Based on knowledge acquired from the homeowner at 1640 Coopers Cove Road, the tanks were previously used to store gasoline for a private plumbing business on-site. Direct Push Technology (DPT) was utilized to advance eight soil borings to depths of approximately 18 to 36 feet below ground surface (bgs) around the gasoline USTs on December 22, 2023. Detections of total petroleum hydrocarbon – gasoline range organics (TPH-GRO), benzene, toluene, ethylbenzene, total xylenes (BTEX), and naphthalene were reported in the samples collected from various soil boring locations surrounding the tanks. Samples collected from the southwestern side of the UST basin at a depth of ten feet were highest for TPH-GRO levels at 3,490 milligrams per kilogram (mg/kg), benzene at 969 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ), ethylbenzene (79,800  $\mu\text{g}/\text{kg}$ ), total xylenes (344,000  $\mu\text{g}/\text{kg}$ ), total BTEX (485,969  $\mu\text{g}/\text{kg}$ ), and naphthalene (71,900  $\mu\text{g}/\text{kg}$ ). Detections of toluene were highest in the samples collected from the boring advanced on the southeastern edge of the basin at a depth of 34 to 36 feet. During the DPT event, one additional boring was advanced adjacent to the out-of-use, 500-gallon heating oil UST located at 1556 Coopers Cove Road. A detection of total petroleum hydrocarbon – diesel range organics (TPH-DRO) above the DEQ soil saturation level of 13,000 mg/kg was reported. Detections of TPH-DRO were not reported in the soil sample collected near the out-of-use 500-gallon heating oil UST located at 1640 Coopers Cove Road.

The release from the gasoline USTs at 1640 Coopers Cove Road will remain under PC# 2024-2089, while the release that occurred from the heating oil UST at 1556 Coopers Cove Road was placed under PC# 2024-2133. In the RI Report submitted on February 2, 2024, TEC recommended removal of the three gasoline USTs under PC# 2024-2089. TEC also recommended

removal of the heating oil UST from 1556 Coopers Cove Road under PC# 2024-2133. In addition, TEC recommended the investigation of nearby gasoline USTs located at 1430 Coopers Cove Road. This Release Investigation will be documented under PC# 2024-2166. DEQ agreed with removal of the gasoline tanks at 1640 Coopers Cove Road and additional supply well sampling events under an Initial Abatement Measures Report (IAMR) phase of work.

### **1.1.2 Initial Abatement Measures Report – April 2, 2024**

On February 6, 2024, TEC mobilized to the site in order to begin removal of the three gasoline USTs located at 1640 Coopers Cove Road. The concrete pad was dismantled and the clean soil above the tanks was removed and set aside. Each tank was exposed at approximately 36 inches bgs.

Two fill pipes were originally located during previous Release Investigation activities. It was determined that these fill pipes were connected to UST-1 and UST-2. Per owner knowledge, the third tank was expected to be manifolded into one of the other two tanks. However, a third fill pipe was located under the gravel driveway adjacent to the concrete pad, and less than two inches of gasoline were present in the tank. TEC proceeded to cut one of the vent pipes below grade and the piping was removed from the ground. The second vent pipe was left in place as it was utilized for a satellite dish. It was determined that it was the vent pipe for UST-3 that was manifolded into UST-2 and not the fill pipe.

TEC returned to the site on February 7, 2024, and exposed the three tanks on all sides. A vacuum truck, provided by W.E.L., was used to recover any remaining liquids through the fill pipes located on each tank. The tanks were then removed and set on the ground outside of the UST basin. Each tank was measured to be approximately 11 feet in length with a four-foot diameter. A pressure washer was used to clean the inside of the tanks while the vacuum hose recovered all petroleum-impacted wash water, as well as gasoline vapors. The inside of each tank was washed and vacuumed of any remaining fuel and/or sludge. A total of 160 gallons of gasoline and petroleum-impacted water were recovered and properly disposed of off-site by W.E.L. The three USTs were transported off-site for disposal.

Soil samples were obtained from below each tank prior to the excavation of impacted soils, as well as post-excavation. In addition, samples were obtained from the maximum extent of the excavation of approximately 18 feet bgs and at an additional depth of 25 feet bgs. Analytical results indicate that the majority of residual-phase hydrocarbons do not appear to attenuate with depth.

A total of 157.49 tons of petroleum-impacted soil were removed from the site and properly disposed. Groundwater was not encountered at the maximum excavation depth of 18 feet bgs or in the hand auger borings that were advanced to 25 feet bgs. An injection well system was installed in the former UST basin in order to facilitate bioremediation in situ during future site activities.

One additional DEQ public meeting was held with members of the Coopers Cove community. TEC collected groundwater samples from four supply wells located within one mile of the release. There were no petroleum-related detections reported.

TEC recommended a Post-Site Characterization Monitoring (PSCM) phase to include collection of follow-up groundwater samples for all supply wells previously sampled during the RI and IAM phases of work and continue to collect groundwater samples from supply wells located

within one mile of the release as authorized by DEQ. TEC would also continue to aid DEQ in investigating the feasibility of extending the municipal water supply that is currently owned by Lakeshore Terrace.

## 1.2 LOCATION AND DESCRIPTION

The area of Franklin County, Virginia, where the petroleum release was originally reported, is primarily residential and of agricultural use. According to the United States Geological Survey (USGS) 1963 Hardy, Virginia 7.5 Minute Quadrangle Map, the approximate land surface elevation is 1,100 feet above mean sea level (amsl) (Figure 1). The topography of the surrounding area is relatively mountainous with a gentle slope from the north towards the south. Prater Creek is located approximately 1,000 feet southeast of the gasoline tank basin and runs from the southwest to the northeast, where it empties into the Roanoke River.

## 1.3 SITE GEOLOGY

According to the United States Geological Survey (USGS), the most prominent formation in the immediate area is the Ashe Formation, which is described as containing medium- to light-gray, massive, conglomeratic biotite schist and gneiss, with feldspar, quartz, and granitic clasts; grading upwards into medium- to fine-grained, salt-and-pepper-textured two-mica plagioclase gneiss with very-light-gray mica schist interbeds.

During DPT activities performed during the Release Investigation, a weathered saprolite layer was typically encountered between 10 to 15 feet bgs near the gasoline UST basin. A consistent transition from clay to silt was noted after this depth. During UST removal activities, a transition from clay to primarily silt was observed from approximately 12 feet to the maximum excavation depth of 18 feet bgs and weathered saprolite was noted in the soil sample obtained via hand auger at a depth of 25 feet bgs.

## **2.0 POST-SITE CHARACTERIZATION MONITORING ACTIVITIES**

---

---

During the Post-Site Characterization Monitoring Sub-Phase #1, TEC collected groundwater samples from 34 supply wells located within one mile of the release. The majority of the groundwater samples collected during this phase of work were quarterly follow-up samples. In addition, TEC began moving forward with preliminary investigation of the feasibility of installing a community well system in the nearby area. Table 1 displays all current and historical supply well sampling data. An updated aerial site map is available as Figure 2.

### **2.1 GROUNDWATER SAMPLING (3/23/2024)**

On March 23, 2024, TEC personnel met with the property owner of the Terrace Water Corporation in order to collect groundwater samples from the community well system. The DEQ and Western Virginia Water Authority (WVWA) were originally in discussion with the owner of Terrace Water Corporation to potentially extend and connect the water line to the impacted residences of the Coopers Cove Community. TEC obtained the raw groundwater sample in laboratory-provided sample container and placed the samples on ice. During the same visit, TEC also collected a sample from 5222 Palmetto Bluff Road, after the owners expressed interest in having their supply well sampled. Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy Analytical (Enthalpy) in Richmond, Virginia.

#### **2.1.1 Groundwater Sampling Results (3/23/2024)**

The groundwater samples collected from the Terrace Water Corporation were analyzed for volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260D, semi-volatile organic compounds (SVOCs) via EPA Method 8270E, and 1,2-Dibromoethane (EDB) via EPA Method 8011. EDB is a ubiquitous component of lead-based antiknock additive mixtures, which were used from the 1920s through the late 1980s to increase gasoline octane ratings. There were no reported detections in the groundwater samples collected from the Terrace Water Corporation community well system.

The groundwater samples collected from the property located at 5222 Palmetto Bluff Road were analyzed for VOCs via 8260 and EDB via 8011. There were no reported detections in the supply well samples. The analytical report and chain of custody documentation are available in Attachment A.

### **2.2 GROUNDWATER SAMPLING (4/1/2024)**

On April 1, 2024, TEC personnel visited 13 properties to collect quarterly follow-up groundwater samples from the supply wells located at:

- 76 Patsel Court
- 1987 Coopers Cove Road
- 5444 Windermere Way
- 1356 Coopers Cove Road (Walter's Greenhouse)
- 17 Valley View Road
- 1326 Coopers Cove Road

- 55 Valley View Road
- 350 Ridgecrest Road
- 411 Coopers Cove Road (Community Well)
- 46 Ridgecrest Road
- 1515 Coopers Cove Road
- 1451 Coopers Cove Road
- 1555 Coopers Cove Road

Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy for analysis of VOCs 8260 and EDB 8011.

#### **2.2.1 Groundwater Sampling Results (4/1/2024)**

Detections of MTBE were reported in the groundwater samples collected from 76 Patsel Court (1.86 µg/L) and 5444 Windermere Way (6.03 µg/L). The property owners were notified, and the impacted supply wells were connected to CFUs in order to provide potable water to the residences.

There were no other reported detections in any of the other supply wells that were sampled on April 1, 2024. The analytical report and chain of custody documentation are available in Attachment B.

### **2.3 GROUNDWATER SAMPLING (4/2/2024)**

On April 2, 2024, TEC personnel visited five properties to collect quarterly follow-up groundwater samples from the supply wells located at:

- 17 Ridgecrest Road
- 1601 Coopers Cove Road
- 2234 Coopers Cove Road
- 5290 Pitzer Road
- 5281 Pitzer Road

Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy, for analysis of VOCs 8260 and EDB 8011.

#### **2.3.1 Groundwater Sampling Results (4/2/2024)**

There were no reported detections in the five groundwater samples that were collected on April 2, 2024. The analytical report and chain of custody documentation are available in Attachment C.

## **2.4 GROUNDWATER SAMPLING (4/4/2024)**

On April 4, 2024, TEC collected groundwater samples from three properties, including 1430 Coopers Cove Road, 5274 Palmetto Bluff Road, and 5390 Palmetto Bluff Road. Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy Analytical, for analysis of VOCs 8260 and EDB 8011.

### **2.4.1 Groundwater Sampling Results (4/4/2024)**

There were no reported detections in the three groundwater samples that were collected on April 4, 2024. The analytical report and chain of custody documentation are available in Attachment D.

## **2.5 GROUNDWATER SAMPLING (4/10/2024)**

On April 10, 2024, TEC collected groundwater samples from four properties, including 2250 Coopers Cove Road, 1609 Coopers Cove Road, 1850 Coopers Cove Road, and 2237 Coopers Cove Road. Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy Analytical, for analysis of VOCs 8260 and EDB 8011.

### **2.5.1 Groundwater Sampling Results (4/10/2024)**

A detection of acetone (15.9 µg/L) was reported in the supply well samples collected from 1850 Coopers Cove Road. Per limited research, the presence of acetone without any other breakdown chemicals reported is likely attributed to either field or laboratory contamination and is not thought to be related to the petroleum release. There were no reported detections in the four groundwater samples that were collected on April 10, 2024. The analytical report and chain of custody documentation are available in Attachment E.

## **2.6 GROUNDWATER SAMPLING (6/11/2024)**

On June 11, 2024, TEC collected groundwater samples from three properties, including 920 Buckeye Lane, 5370 Palmetto Bluff Road, and 4567 Windy Gap Drive. Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy, for analysis of VOCs 8260 and EDB 8011.

### **2.6.1 Groundwater Sampling Results (6/11/2024)**

Detections of acetone were reported in the samples collected from each supply well. This includes 16.5 µg/L acetone reported in the samples collected from 920 Buckeye Lane, 10.3 µg/L acetone reported in the samples collected from 5370 Palmetto Bluff Road, and 12.1 µg/L acetone reported in the samples collected from 4567 Windy Gap Drive. TEC communicated the results of the sampling event to DEQ, and it was concluded that a full resampling event of the three wells would occur. The analytical report and chain of custody documentation for the June 11, 2024, sampling event are available in Attachment F.

## **2.7 GROUNDWATER SAMPLING (6/27/2024)**

On June 27, 2024, TEC returned to the three properties to collect additional groundwater samples due to the previous acetone detections. Each supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy, for analysis of VOCs 8260 only.

### **2.7.1 Groundwater Sampling Results (6/27/2024)**

There were no reported detections of acetone in any of the additional samples that were collected. TEC discussed the results of the resampling event with the laboratory director of Enthalpy Analytical and multiple tests are currently being conducted in order to determine where the acetone detections are likely to originate from.

The analytical report and chain of custody documentation for the June 11, 2024, sampling event are available in Attachment G.

## **2.8 GROUNDWATER SAMPLING (6/13/2024)**

On June 13, 2024, TEC collected groundwater samples from the property located at 5409 Windermere Way. The supply well was allowed to purge for approximately ten minutes prior to sample collection. The sampler donned new nitrile gloves and collected the samples in laboratory-provided containers. The samples were placed on ice and transported to Enthalpy Analytical, for analysis of VOCs 8260 and EDB 8011.

### **2.8.1 Groundwater Sampling Results (6/13/2024)**

A detection of chloroform (0.73 µg/L) was reported in the groundwater samples collected from the supply well at 5409 Windermere Way. This property is currently being renovated and the chloroform detection is likely related to the routine chlorination of private supply wells. The detection reported during the June 13, 2024, sampling event has also decreased (1.53 µg/L to 0.73 µg/L) since the last sampling event conducted on March 7, 2024.

There were no other reported detections in the groundwater samples collected from the supply well at 5409 Windermere Way. The analytical report and chain of custody documentation are available in Attachment H.

## **2.9 COMMUNITY WELL INVESTIGATION**

With 21 confirmed supply wells impacted with dissolved-phase hydrocarbons (DPH), a permanent, potable water source is required. Initial interest was in the possibility of connecting and extending a waterline from the Terrace Water Association, which utilizes two community supply wells and two 16,200-gallon aboveground water tanks to supply drinking water to multiple residences in the Lakeshore Terrace community. TEC collected groundwater samples from this water supply during this phase of work and no detections of VOCs or EDB were reported. After multiple negotiations between the private operator of the community well system, Western Virginia Water Authority (WVWA), and DEQ, it appears that this connection will likely not occur.

TEC and DEQ recently discussed installation of a new community well system near the affected area of the Coopers Cove community. TEC contracted HydroGeo, of Charlottesville, Virginia, on August 5, 2024, to provide initial data collection on nearby parcels that could potentially provide the necessary water supply to provide potable water to multiple residences. This initial data collection includes obtaining air photos, light detection and ranging (LiDAR) maps, fracture trace analysis, and geographic information systems (GIS) evaluation of localized geology and soils.

### **3.0 CONCLUSIONS AND RECOMMENDATIONS**

---

---

#### **3.1 CONCLUSIONS**

During PSCM #1 activities, groundwater samples were collected from a total of 34 supply wells and analyzed for VOCs and EDB. Detections of MTBE were reported in two additional supply wells, bringing the total number of wells impacted by DPH to 21.

Acetone was detected in multiple supply wells during this quarter's sampling event. Per limited research, the presence of acetone without any other breakdown chemicals reported is likely attributed to either field or laboratory contamination and is not thought to be related to the petroleum release. TEC collected follow-up sampling as a precaution for three of the supply wells and no detections of acetone were reported in the secondary set of samples. TEC is working closely with the director of Enthalpy Analytical to determine any possible sources of acetone detections to reduce any possible contamination moving forward.

After possible connection to the Terrace Water Association community well system was terminated, TEC contracted HydroGeo to conduct initial investigation to determine the best possible location for a community well system in the nearby area. Once this initial information is obtained and analyzed, TEC and DEQ will reach out to the owner(s) of the parcels that have been deemed potential options for a successful community water supply. If the owner(s) are interested in providing an easement, TEC will continue working with HydroGeo to perform subsurface geophysics mapping via Electromagnetic (EM) Surveys and Electrical Resistivity (ER) Surveys on the chosen parcel(s).

#### **3.2 RECOMMENDATIONS**

TEC recommends conducting additional site work under PC# 2024-2089 during a Post-Site Characterization Monitoring Sub-Phase #2 (PSCM #2), which is to include the following activities:

- Continue to collect groundwater samples from supply wells located within one mile of the release as requested by homeowners and authorized by DEQ.
  - Residences with carbon filtration systems are currently on a separate sampling schedule with Stoner Water Quality (Culligan).
- Obtain initial photo-ionization detector (PID) readings from the injection wells installed at the former UST basin.
- Injection of Spillaway® bioremediation product into the existing injection well system along with post-injection PID readings.

- Work alongside HydroGeo to choose potential locations for potable community well system in the nearby area via initial groundwater prospecting data collection and follow-up Electromagnetic (EM) and Electrical Resistivity (ER) surveys of selected parcels.
- Begin obtaining necessary easement documentation to begin drilling replacement supply well(s) on selected parcels.

## **4.0 LIMITATIONS**

---

---

TEC's professional services have been performed, findings obtained, and recommendations prepared in accordance with customary principles and practices in the fields of geology and environmental science. TEC is not responsible for the independent conclusions, opinions, or recommendations made by others based on the field exploration and laboratory test data presented in this report.

The work performed in conjunction with this report and the data developed are intended to describe available information at the dates and locations given. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

## Certificate of Analysis

### *Final Report*

Laboratory Order ID 24C1309

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B Lorton, VA 22079	Date Received:	March 26, 2024 10:18
Submitted To:	Shanna Hryvniak	Date Issued:	March 28, 2024 14:35
		Project Number:	4260155-001
		Purchase Order:	4260155-001

Client Site I.D.: Coopers Cove Rd, Hardy VA

Enclosed are the results of analyses for samples received by the laboratory on 03/26/2024 10:18. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars  
Technical Director

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

- C Continuing calibration verification response for this analyte is outside specifications.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- D.F. Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
- PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

## Certificate of Analysis

### *Final Report*

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B	Date Issued:	March 28, 2024 14:35
		Project Number:	4260155-001
		Purchase Order:	4260155-001
Submitted To:	Lorton VA, 22079 Shanna Hryvniak		
Client Site I.D.:	Coopers Cove Rd, Hardy VA		

## Sample Conditions Checklist

Samples Received at:	2.00°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	No
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Trip blanks logged for collection information per the VOAs received . HEG 3/26/24  
1551

Shanna Hryvniak notified via email trip blanks were not received for EDB-TCP-DBCP  
8011 analysis. HEG 3/27/24 1134

Shanna Hryvniak approved to run samples for EDB-TCP-DBCP 8011 without trip  
blanks. HEG 3/27/24 1359

Enclosed are the results of analyses for samples received by the laboratory on 04/02/2024 10:00. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars  
Technical Director

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

L	LCS recovery is outside of established acceptance limits
M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
D.F.	Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

## Certificate of Analysis

### *Final Report*

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B	Date Issued:	April 09, 2024 11:04
	Lorton VA, 22079	Project Number:	[none]
Submitted To:	Jessica Brock	Purchase Order:	4260177-001
Client Site I.D.:	Coopers Cove - State Lead		

### Sample Conditions Checklist

Samples Received at:	3.30°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

See Work Order 24D0069 for Trip Blanks. HEG 4/24 1550

Enclosed are the results of analyses for samples received by the laboratory on 04/03/2024 11:55-04/10/2024 14:26. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars  
Technical Director

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

- B Blank contamination. The recorded result is associated with a contaminated blank.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- D.F. Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
- PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

	Lorton VA, 22079	Project Number:	4260177-001
Submitted To:	Jessica Brock	Purchase Order:	4260177-001
Client Site I.D.:	Coopers Cove Rd Hardy, VA		

### Sample Conditions Checklist

Samples Received at:	3.50°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

How were samples received?	
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

### Work Order Comments

Shanna Hryvniak requested VOC 8260 analysis on 24D0224 via email. VJT 4/10/24  
1431

Trip blank collection information was taken off of the sample containers. VJT 4/10/24  
1456

Enclosed are the results of analyses for samples received by the laboratory on 04/05/2024 14:30. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars  
Technical Director

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

B	Blank contamination. The recorded result is associated with a contaminated blank.
L	LCS recovery is outside of established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
D.F.	Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
PCBs, Total	Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

## Certificate of Analysis

### *Final Report*

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B	Date Issued:	April 11, 2024 14:43
	Lorton VA, 22079	Project Number:	4260177
Submitted To:	Shanna Hryvniak	Purchase Order:	4260177-001
Client Site I.D.:	Coopers Cove Rd, Hardy VA		

## Sample Conditions Checklist

Samples Received at:	2.60°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Enclosed are the results of analyses for samples received by the laboratory on 04/11/2024 11:36. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Ted Soyars".

Ted Soyars  
Technical Director

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

C	Continuing calibration verification response for this analyte is outside specifications.
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
D.F.	Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total      Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

## Certificate of Analysis

### *Final Report*

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B	Date Issued:	April 18, 2024 11:14
		Project Number:	4260177
		Purchase Order:	4260177-001
Submitted To:	Lorton VA, 22079 Shanna Hryvniak		
Client Site I.D.:	Coopers Cove Rd, Hardy, VA		

### Sample Conditions Checklist

Samples Received at:	4.80°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Trip Blank information per containers received.  
JNH 4/12/24 1535

Enclosed are the results of analyses for samples received by the laboratory on 06/12/2024 13:16. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Sarah Endsley".

Sarah R. Endsley  
Laboratory Manager

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

- C Continuing calibration verification response for this analyte is outside specifications.
- CI Residual Chlorine or other oxidizing agent was detected in the container used to analyze this sample.
- L LCS recovery is outside of established acceptance limits
- M Matrix spike recovery is outside established acceptance limits
- P Duplicate analysis does not meet the acceptance criteria for precision
- RPD Relative Percent Difference
- Qual Qualifiers
- RE Denotes sample was re-analyzed
- D.F. Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
- TIC Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.
- PCBs, Total Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

### *Final Report*

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B	Date Issued:	June 18, 2024 17:21
		Project Number:	4260177
		Purchase Order:	4260177-001
Submitted To:	Lorton VA, 22079 Shanna Hryvniak		
Client Site I.D.:	Coopers Cove Rd., Hardy VA		

### Sample Conditions Checklist

Samples Received at:	0.10°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	No
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Shanna Hryvniak notified via email for trip blanks were not received for EDB 8011 analysis. HEG 6/13/24 1408

Shanna Hryvniak confirmed via email to run EDB without trip blanks. HEG 6/13/24 1500

Project Manager

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

C	Continuing calibration verification response for this analyte is outside specifications.
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
D.F.	Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total      Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

## Certificate of Analysis

### *Final Report*

Client Name: Total Environmental Concepts-Lorton      Date Issued: July 08, 2024 12:35  
8382 Terminal Rd, Bay B      Project Number: [none]  
Submitted To: Lorton VA, 22079      Purchase Order:  
Shanna Hryvniak  
Client Site I.D.: Coopers Cove Rd

### Sample Conditions Checklist

Samples Received at:	1.30°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	No
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	Yes
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Client Name:	Total Environmental Concepts-Lorton 8382 Terminal Rd, Bay B Lorton, VA 22079	Date Received:	June 14, 2024 13:10
Submitted To:	Shanna Hryvniak	Date Issued:	June 21, 2024 14:08
		Project Number:	4260177
		Purchase Order:	4260177-001

Client Site I.D.: Coopers Cove Rd., Hardy, VA

Enclosed are the results of analyses for samples received by the laboratory on 06/14/2024 13:10. If you have any questions concerning this report, please feel free to contact the laboratory.

Sincerely,

A handwritten signature in black ink that reads "Sarah Endsley".

Sarah R. Endsley  
Laboratory Manager

#### End Notes:

The test results listed in this report relate only to the samples submitted to the laboratory and as received by the Laboratory.

Unless otherwise noted, the test results for solid materials are calculated on a wet weight basis. Analyses for pH, dissolved oxygen, temperature, residual chlorine and sulfite that are performed in the laboratory do not meet NELAC requirements due to extremely short holding times. These analyses should be performed in the field. The results of field analyses performed by the Sampler included in the Certificate of Analysis are done so at the client's request and are not included in the laboratory's fields of certification nor have they been audited for adherence to a reference method or procedure.

The signature on the final report certifies that these results conform to all applicable NELAC standards unless otherwise specified. For a complete list of the Laboratory's NELAC certified parameters please contact customer service.

This report shall not be reproduced except in full without the expressed and written approval of an authorized representative of Enthalpy Analytical.

### Summary of Data Qualifiers

M	Matrix spike recovery is outside established acceptance limits
RPD	Relative Percent Difference
Qual	Qualifiers
-RE	Denotes sample was re-analyzed
D.F.	Dilution Factor. Please also see the Preparation Factor in the Analysis Summary section.
TIC	Tentatively Identified Compounds are compounds that are identified by comparing the analyte mass spectral pattern with the NIST spectral library. A TIC spectral match is reported when the pattern is at least 75% consistent with the published pattern. Compound concentrations are estimated and are calculated using an internal standard response factor of 1.

PCBs, Total      Total PCBs are defined as the sum of detected Aroclors 1016, 1221, 1232, 1248, 1254, 1260, 1262, and 1268.

### Sample Conditions Checklist

Samples Received at:	5.60°C
How were samples received?	Walk In
Were Custody Seals used? If so, were they received intact?	Yes
Are the custody papers filled out completely and correctly?	Yes
Do all bottle labels agree with custody papers?	Yes
Is the temperature blank or representative sample within acceptable limits or received on ice, and recently taken?	Yes
Are all samples within holding time for requested laboratory tests?	Yes
Is a sufficient amount of sample provided to perform the tests included?	Yes
Are all samples in appropriate containers for the analyses requested?	Yes
Were volatile organic containers received?	Yes
Are all volatile organic and TOX containers free of headspace?	Yes
Is a trip blank provided for each VOC sample set? VOC sample sets include EPA8011, EPA504, EPA8260, EPA624, EPA8015 GRO, EPA8021, EPA524, and RSK-175.	No
Are all samples received appropriately preserved? Note that metals containers do not require field preservation but lab preservation may delay analysis. In addition, field parameters are always received outside holding time and will be marked accordingly.	Yes

Trip Blanks were not received
